Exam SAP C-ACDET-2506 Tutorial - Valid Exam C-ACDET-2506 Book

We have chosen a large number of professionals to make C-ACDET-2506 learning question more professional, while allowing our study materials to keep up with the times. Of course, we do it all for you to get the information you want, and you can make faster progress. You can also get help from C-ACDET-2506 exam training professionals at any time when you encounter any problems. We can be sure that with the professional help of our C-ACDET-2506 Test Guide you will surely get a very good experience. Good materials and methods can help you to do more with less. Choose C-ACDET-2506 test guide to get you closer to success.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which of the following applies in a greenfield deployment scenario when migrating configurations from your test site?

- A. You can revert migrated configurations from the target site.
- **B. You cannot make other configuration updates in ICM when a migration operation is in progress.**
- **C. The status changes to Complete when migration is finished.**
- D. if any configuration type fails during the migration process, you cannot create a new migration request.

Answer: B,C

NEW QUESTION # 56

Which document outlines the roles and responsibilities for the SAP Deployment Lead assigned to your project?

- A. Onboard Resource Center
- B. Partner Statement of Work
- **C. Deployment Description**

- D. Inline Help

Answer: C

NEW QUESTION # 57

Which of the following is NOT mentioned as a configuration type migrated by the Intelligent Configuration Manager?

- A. **SupplierContact - contacts for the suppliers**
- B. Template - project templates such as Contract templates
- C. DynamicForm - custom form templates (dForms)
- D. AMLExtension - AML customizations such as custom fields

Answer: A

Explanation:

The Intelligent Configuration Manager (ICM) migrates configuration types such as DynamicForms (dForms), AML Extensions (custom fields and enumerations), and Templates (contract or project templates). However, SupplierContactdata, which is master or transactional data, is not migrated through ICM because ICM focuses on configuration migration, not operational or transactional data. Supplier contact information is managed separately and must be migrated using appropriate master data processes.

NEW QUESTION # 58

If you add a custom field to the ContractWorkspace class, which other class(es) will that field be added to?

- A. ContractRequest
- B. AbstractContractWorkspace
- C. SalesContractRequest and InternalContractRequest
- D. **InternalContractWorkspace and SalesContractWorkspace**

Answer: D

Explanation:

The ContractWorkspace class is a parent class to both InternalContractWorkspace and SalesContractWorkspace classes in SAP Ariba. When a custom field is added to ContractWorkspace, it automatically inherits down to both these subclasses, making the field available in both internal and sales contract workspace types. It does not propagate upward to AbstractContractWorkspace or into contract request classes. This inheritance model is part of SAP Ariba's class hierarchy to ensure consistent data structures across related contract objects.

NEW QUESTION # 59

You have defined a custom field to have a default value based on another field. You have verified that the defaulting happens correctly the first time. However, when the dependent field changes value, your custom field does not change. What scenarios could cause this? (Select 3 correct answers)

- A. **The parameter Application.Base.RecomputeValueOnFieldChange is not enabled**
- B. **Your custom field has the property Respect User Value enabled, and the user has manually entered another value into the field**
- C. The custom field has the property Lock Initial value enabled, which prohibits a field to be changed once it's set
- D. **Your dependent field does not have the property Refresh screen on value change enabled**
- E. The defaulting Expression sets a value that violates the custom field Validity Condition

Answer: A,B,D

Explanation:

* B: If the dependent field isn't configured to refresh the UI when its value changes (no "Refresh screen on value change" enabled), the defaulting logic won't retrigger.

* C: The global parameter Application.Base.RecomputeValueOnFieldChange must be enabled so that dependent default expressions recalculate on field changes; otherwise, they won't update automatically.

* E: The "Respect User Value" property, when enabled, means that if a user manually overrides the default, the system will not recalculate or overwrite the field even if dependencies change. Lock Initial Value (A) prevents edits after first default but doesn't

affect recomputation, and violating validity (D) would trigger an error, not silently block updates.

NEW QUESTION # 60

.....

At the time when people are hesitating about that which kind of C-ACDET-2506 study material should be chosen in order to prepare for the important exam I would like to recommend the C-ACDET-2506 training materials compiled by our company for you to complete the task. We have put substantial amount of money and effort into upgrading the quality of our C-ACDET-2506 Preparation material. There are so many advantages of our C-ACDET-2506 actual exam, such as free demo available, multiple choices, and practice test available to name but a few.
