

New C-TS422-2023 Learning Materials - C-TS422-2023 Certification Dump

www.ERPPrep.com
Get complete detail on C_TS422_2023 exam guide to crack SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing. You can collect all information on C_TS422_2023 tutorial, practice test, books, study material, exam questions, and syllabus. Firm your knowledge on SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing and get ready to crack C_TS422_2023 certification. Explore all information on C_TS422_2023 exam with number of questions, passing percentage and time duration to complete test.

P.S. Free & New C-TS422-2023 dumps are available on Google Drive shared by DumpsActual: <https://drive.google.com/open?id=1hfdI-s5ac2bMfXWsxRf9ep0L2vT4guX>

Everybody should recognize the valuable of our life; we can't waste our time, so you need a good way to help you get your goals straightly. Of course, our C-TS422-2023 latest exam torrents are your best choice. I promise you that you can learn from the C-TS422-2023 Exam Questions not only the knowledge of the certificate exam, but also the ways to answer questions quickly and accurately.

As we all know, review what we have learned is important, since, it can make us have a good command of the knowledge. C-TS422-2023 Online test engine has testing history and performance review, and you can have general review of what you have learned. In addition, with the professional team to edit, C-TS422-2023 exam cram is high-quality, and it also contain certain quantity, and you can pass the exam by using C-TS422-2023 Exam Dumps. In order to serve you better, we have online and offline chat service, and if you have any questions for C-TS422-2023 exam materials, you can consult us, and we will give you reply as soon as possible.

DumpsActual SAP C-TS422-2023 Desktop Practice Exam Software

Candidates who are preparing for the SAP exam suffer greatly in their search for preparation material. You won't need anything else if you prepare for the exam with our SAP C-TS422-2023 Exam Questions. Our experts have prepared SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing with dumps questions that will eliminate your chances of failing the exam.

SAP C-TS422-2023 Exam Syllabus Topics:

Topic	Details
Topic 1	Managing Clean Core: This section covers the application of clean core principles to enhance business process agility, reduce adaptation efforts, and drive innovation in ERP systems.
Topic 2	- Production Orders in SAP S 4HANA: This section covers BOM item categorization, order status management, availability checks, routing selection, order type setup, and material handling processes.
Topic 3	- Master Data in SAP S 4HANA: This section covers the exploration of crucial production-related master data elements, with emphasis on bill of material, routing, and production version.
Topic 4	- Material Requirements Planning in SAP S 4HANA: This part of the exam covers an examination of planning strategies, tools, and long-term planning concepts. Overview of MRP fundamentals and lot size procedures.
Topic 5	- Capacity Planning in SAP S 4HANA: This section covers a discussion of SAP S 4HANA best practices, SAP HANA database concept, SAP Fiori user experience, and embedded analytics capabilities.
Topic 6	- Demand Management in SAP S 4HANA: This section covers a comparison of production methods in various manufacturing environments.
Topic 7	- Process Orders in SAP S 4HANA: This section covers an introduction to process order components, processing, and relevant master data objects. Overview of Good Manufacturing Practices (GMP) features.
Topic 8	- Lean Manufacturing in SAP S 4HANA: This section covers repetitive manufacturing master data, line load planning, and Kanban systems.

SAP S/4HANA Cloud Private Edition - Production Planning and Manufacturing Sample Questions (Q15-Q20):

NEW QUESTION # 15

For production orders, cost object controlling (COC) can be carried out on an order-related or product- related basis. Which of the following do you have to consider?

Note: There are 2 correct answers to this question.

- A. Product-related COC is used in manufacturing for co-products
- B. Order-related COC is beneficial in a flexible production environment
- C. In order-related COC, individual production orders do NOT have cost segments.
- D. In product-related COC, all costs are debited and credited to a product cost collector.

Answer: A,D

Explanation:

The difference between order-related and product-related COC is mainly in the level of cost object that is used to collect and analyze the costs of production. In order-related COC, each production order is a cost object that carries its own plan, target, and actual costs. In product-related COC, a product cost collector is a cost object that aggregates the costs of multiple production orders for the same product or product variant. The advantages and disadvantages of each approach depend on the production scenario and the reporting requirements. Some of the factors to consider are:

In product-related COC, all costs are debited and credited to a product cost collector. This means that the production orders linked to the product cost collector do not have any cost segments and do not show any variances. The product cost collector is used for variance calculation and settlement. This simplifies the cost accounting process and reduces the number of cost objects to be

managed. However, this also means that the cost details of individual production orders are not available for analysis. Product-related COC is suitable for mass production of standard products with low variance and high volume¹².

Order-related COC is beneficial in a flexible production environment where each production order has different characteristics, such as lot size, routing, material components, or quality specifications. Order-related COC allows for a detailed analysis of the cost and performance of each production order and enables a more accurate allocation of overhead costs. However, order-related COC also requires more effort and resources to maintain and process the cost segments and variances of each production order. Order-related COC is suitable for make-to-order or engineer-to-order scenarios where each production order is unique and customized¹².

Product-related COC is used in manufacturing for co-products, which are products that are produced simultaneously from the same production process and have a relatively high sales value. Co-products share the joint costs of the production process based on a predefined apportionment structure. Product-related COC allows for a consistent and transparent allocation of the joint costs to the co-products and avoids the problem of negative variances that may occur in order-related COC. Product-related COC is suitable for process industries where co-products are common, such as chemical, pharmaceutical, or food industries³⁴.

NEW QUESTION # 16

What can you use heuristics in Advanced Planning (PP/DS) for?

- A. To optimize costs and times in production plans
- B. To set default values in production master data
- **C. To solve planning problems for defined objects**
- D. To automate material movements in material staging

Answer: C

Explanation:

Heuristics are planning functions that execute planning for selected objects, such as products, resources, operations, or line networks, using a specific procedure. Heuristics are used in interactive planning, the SAP S/4HANA Digital Core MRP_live or in the Advanced Planning (PP/DS) production planning run. In the Advanced Planning, you can execute several heuristics, which belong to both production planning and detailed scheduling, for the same products in one planning run. Heuristics can help you to solve planning problems for defined objects, such as creating feasible production plans, scheduling operations, assigning resources, or leveling capacities. Heuristics can also consider various constraints and parameters, such as lead times, lot sizes, setup times, priorities, or alternative modes¹².

NEW QUESTION # 17

Which standard item categories can you select inside a bill of material (BOM)?

Note: There are 2 correct answers to this question

- **A. Non-stock item**
- B. Work item
- **C. Variable-size item**
- D. WBS item

Answer: A,C

Explanation:

You can select the following standard item categories inside a bill of material (BOM):

Variable-size item: This item category is used for materials that have variable dimensions, such as pipes, wires, or fabrics. The system calculates the quantity of the variable-size item based on the formula and the dimensions entered in the BOM. You can also use the variable-size item to define a scrap percentage for the material.

Non-stock item: This item category is used for materials that are not managed in inventory, such as consumables, services, or subcontracting items. The system does not create any reservations or stock movements for the non-stock item. You can use the

non-stock item to trigger purchasing requisitions or purchase orders for the material. Reference: Bill of Material Item Category, Bills of Material in Production Planning

NEW QUESTION # 18

What is the purpose of a reporting point confirmation in repetitive manufacturing?

Note: There are 2 Correct answers to this question?

- A. To provide timely updates of inventory management for the staged components
- B. To determine the work in progress along the production line
- C. To stage different components for a production line simultaneously
- D. To reduce the total production lead time for a long production line

Answer: A,B

Explanation:

A reporting point confirmation is a function that allows you to backflush the material components and activities that have been consumed and performed at a specific operation in a repetitive manufacturing process. It also reduces the dependent requirements for the planned orders. You can use reporting point confirmation for the following purposes:

To determine the work in progress (WIP) along the production line, by posting the quantity that is on the production line at each reporting point. This helps you to calculate the volume and value of unfinished products.

To provide timely updates of inventory management for the staged components, by recording the withdrawal of components at a time that is close to the time of the operation in which they are used. This helps you to avoid discrepancies between the actual and planned consumption of materials. Reference: Reporting Point Confirmation, Repetitive Manufacturing Confirmation

NEW QUESTION # 19

Mode selection is one of the scheduling options available with Advanced Planning in SAP S/4HANA Cloud Private Edition. When can you use mode selection?

- A. When multiple planned orders are scheduled in parallel on one resource
- B. When several production versions are maintained for one product
- C. When alternative resources are used within one operation
- D. When several operations are maintained for one product

Answer: C

NEW QUESTION # 20

.....

We make the commitment that if you fail to pass your exam by using C-TS422-2023 study materials of us, we will give you refund. We are pass guarantee and money back guarantee. In addition, C-TS422-2023 exam dumps are high-quality, and you can improve your efficiency if you use them. C-TS422-2023 exam materials contain almost all of the knowledge points for the exam, and you master the major knowledge for the exam as well as improve your professional ability in the process of learning. In order to let you obtain the latest information for the exam, we offer you free update for one year, and the update version for C-TS422-2023 Exam Dumps will be sent to your email automatically.
