SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q37-Q42):

NEW QUESTION # 37

How do you format the Help Tip for a field?

- A. Select Field Configuration and edit the field. In the Help Tip, you can only use plain text without any formatting options.
- B. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can format the text by selecting the string and using regular keyboard controls such as Ctrl-I, Ctrl-B.
- **C. Select Field Configuration, select the class, and edit the field. In the Help Tip, you can add standard HTML tags for formatting**
- D. Select Field Configuration and edit the field. In the Help Tip, you can format the text by using the mouse to highlight the text and then right-clicking to access formatting options.

Answer: C

Explanation:

SAP Ariba supports basic HTML formatting tags in the Help Tip textfield, such as , <i>, and <u>, which allow formatting like bold, italics, and underline within the help tips. This provides flexibility in presenting clear, well-structured guidance to end users. Options B and C suggesting mouse-based formatting or keyboard shortcuts are not supported because the Help Tip editor is a plain text input that parses HTML but does not offer a rich-text UI. Option D is incorrect because HTML tags are explicitly allowed for formatting.

This method enhances user experience by allowing visually distinct emphasis and line breaks in Help Tips, improving clarity without complicating the UI.

NEW QUESTION # 40

Which of the following master data types requires manual migration from Test to Production in a Greenfield migration?

- **A. Enumerations**
- B. Clause Library
- C. Relations and relation entries
- D. Translations

Answer: A

Explanation:

In SAP Ariba Greenfield deployments, Enumerations (picklist value lists) require manual migration because they are not included in Intelligent Configuration Manager (ICM) bundles. Enumerations must be manually exported from Test and imported into Production to ensure correct picklist values for fields that depend on them.

Other master data types like Clause Library and Relations can be migrated using standard migration tools or processes. Translations are handled via AML & Translations Upload.

Ensuring enumerations are migrated correctly is critical because missing or inconsistent enumerations can cause field validation errors.
