- C. AVG()
- D. BOOL\_OR
- E. FIRST()

**Answer:** C, D, E

Explanation:

In SAP Signavio, SIGNAL is a scripting language used for manipulating and analyzing process data. Among the aggregation functions available in SIGNAL, AVG(), FIRST(), and BOOL\_OR are correct answers. These functions serve different purposes:

\* AVG() calculates the average value of a numeric column, useful for finding mean values in datasets.

\* FIRST() returns the first value in a data set based on a specified order. This can be particularly useful in scenarios where you're interested in retrieving an initial value from a series of events or values.

\* BOOL\_OR is a boolean aggregation function that returns true if at least one of the input values is true.

This can be used to aggregate boolean data across different rows or entries.

INNER JOIN and GROUP BY are not aggregation functions. INNER JOIN is used to combine rows from two or more tables based on a related column between them. GROUP BY is used to arrange identical data into groups with the help of some aggregate functions like AVG(), but it is not an aggregation function itself.
