Fast Download CAD Valid Dumps - First-Grade CAD Exam Tool Guarantee Purchasing Safety

Your selection on the riht tool to help your pass the CAD exam and get the according certification matters a lot for the right CAD exam braindumps will spread you a lot of time and efforts. Our CAD Study Guide is the most reliable and popular exam product in the marcket for we only sell the latest CAD practice engine to our clients and you can have a free trial before your purchase.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q71-Q76):

NEW QUESTION # 71
Which one of the following is the correct Link Type to select when creating a module that opens the Record Producer UI for a user rather than the ServiceNow form UI?

- A. URL (from Arguments:)
- B. HTML (from Arguments:)
- C. Script (from Arguments:)
- D. Content Page

Answer: A

Explanation:
In ServiceNow, a Record Producer is a specific type of catalog item that enables users to create task-based records through a simplified interface.
servicenow.com
To create a module that directs users to a Record Producer UI:
* Link Type Selection: Choose "URL (from Arguments:)" as the Link Type. This option allows you to specify a direct URL, enabling the module to open the desired Record Producer interface.
* URL Configuration: In the "Arguments" field, input the URL that points directly to the Record Producer. This URL typically follows the format:
/record_producer.do?sys_id=<sys_id_of_record_producer>
Replace <sys_id_of_record_producer> with the actual sys_id of the Record Producer you intend to open.
By configuring the module this way, users accessing it will be presented with the Record Producer's user- friendly interface, facilitating the creation of new records without navigating through the standard form UI.

NEW QUESTION # 72
Which one of the following is true regarding Application Scope?

- A. Applications downloaded from 3rd party ServiceNow application developers cannot have naming conflicts
- B. Developers can choose the prefix for a scope's namespace
- C. Any developer can edit any application
- D. All applications are automatically part of the Global scope

Answer: A

Explanation:

https://docs.servicenow.com/bundle/rome-application-development/page/build/applications/concept/c_ApplicationScope.html The correct statement regarding Application Scope is that applications downloaded from 3rd party ServiceNow application developers cannot have naming conflicts. Application Scope is a feature that identifies and isolates applications and their related artifacts from other applications. Each scoped application has a unique namespace identifier that consists of a prefix and a scope name. This prevents cross-application name collisions and ensures that only authorized scripts can access or modify data in a scoped application. NEW QUESTION # 73
How many applications menus can an application have?

- A. 3, one for an application's user modules, one for an application's administrator modules, and one for the ServiceNow administrator's modules
- B. 2, one for an application's user modules and one for an application's administrator modules
- C. As many as the application design requires
- D. 1, which is used for all application modules

Answer: C

Explanation:
Explanation/Reference: https://docs.servicenow.com/bundle/orlando-platform-user-interface/page/administer/navigation- and-ui/task/t_CreateAnApplicationMenu.html

NEW QUESTION # 74
What is the Event Registry?

- A. A Workflow which is launched every time an Event is generated; used to debug Events
- B. A table containing a record for every Event known to the ServiceNow system which allows ServiceNow to react when Events are generated
- C. The method used in server-side scripts to generate Events and pass parameters
- D. The Event Log which lists all Events that have been generated

Answer: B

Explanation:
In ServiceNow, the Event Registry is a table that contains a record for every event recognized by the system.
It allows ServiceNow to respond when these events are generated. By registering events, the system can automate activities such as triggering notifications or executing script actions when specific events occur.
Therefore, the correct answer is A.
The other options are not accurate descriptions of the Event Registry:
* B. The Event Log which lists all Events that have been generated: This describes the Event Log, not the Event Registry.
* C. A Workflow which is launched every time an Event is generated; used to debug Events: This is not how the Event Registry functions.
* D. The method used in server-side scripts to generate Events and pass parameters: This describes the gs.eventQueue() method, not the Event Registry.
For more detailed information, refer to the official ServiceNow documentation on the Event Registry.

NEW QUESTION # 75

Which database operations can be controlled with Access Control?
Choose 2 answers

- A. Update
- B. Query
- C. Create
- D. Execute

Answer: A,C

Explanation:
In ServiceNow, Access Controls (ACLs) are used to manage permissions for various database operations on tables and their records. The primary operations that can be controlled include:
* Create:
* Description: Permission to insert new records into a table.
* Control: ACLs can be defined to allow or deny users the ability to create records based on roles, conditions, or scripts.
* Update:
* Description: Permission to modify existing records in a table.
* Control: ACLs can restrict who can update records, ensuring that only authorized users can make changes.
Other Operations:
* Read: Controls the ability to view records in a table.
* Delete: Manages the permission to remove records from a table.
Incorrect Options:
* Execute: Not a standard database operation controlled by ACLs in ServiceNow.
* Query: While querying is part of the read operation, ACLs specifically control the read access rather than the query process itself.
Reference: For more detailed information, please refer to the official ServiceNow documentation on Access Control Rules.
