Once you decide to purchase our CCSK learning materials, we will also provide you with all-day service. If you have any questions, you can contact our specialists. We will provide you with thoughtful service. With our trusted service, our CCSK Study Guide will never make you disappointed.

Cloud Security Alliance (CSA) is a non-profit organization that aims to promote the use of best practices for secure cloud computing. One of its key initiatives is the Certificate of Cloud Security Knowledge (CCSK). The CCSK is a vendor-neutral certification that validates an individual's knowledge and skills in cloud security. The latest version of the certification, CCSK v4.0, covers the latest cloud computing technologies and security issues.

Cloud Security Alliance CCSK (Certificate of Cloud Security Knowledge) Exam is a vendor-neutral certification that focuses on cloud security. CCSK Exam was created by the Cloud Security Alliance (CSA), a non-profit organization that is dedicated to promoting best practices for security in cloud computing. The CCSK Exam is designed to test an individual's knowledge of cloud security concepts, principles, and best practices. CCSK exam is based on the CSA's Cloud Security Guidance for critical areas of focus in cloud computing.

Cloud Security Alliance Certificate of Cloud Security Knowledge (v4.0) Exam Sample Questions (Q252-Q257):

NEW QUESTION # 252

What is the best way to ensure that all data has been removed from a public cloud environment including all media such as back-up tapes?

- A. Maintaining customer managed key management and revoking or deleting keys from the key management system to prevent the data from being accessed again.
- B. Practice Integration of Duties (IOD) so that everyone is able to delete the encrypted data.
- C. Keep the keys stored on the client side so that they are secure and so that the users have the ability to delete their own data.
- D. Allowing the cloud provider to manage your keys so that they have the ability to access and delete the data from the main and back-up storage.
- E. Both B and D.

Answer: A

NEW QUESTION # 253

What are the primary security responsibilities of the cloud provider in compute virtualizations?

- A. Enforce isolation and configure the security settings
- B. Enforce isolation and monitor and log workloads
- C. Maintain a secure virtualization infrastructure and configure the security settings
- D. Monitor and log workloads and configure the security settings
- E. Enforce isolation and maintain a secure virtualization infrastructure

Answer: E

NEW QUESTION # 254

Which of the following are communications method for components within a cloud, some of which (or an entirely different set) are exposed to the cloud user to manage their resources and configurations?

- A. Data Identifiers
- B. Application Programming Interfaces (API)
- C. API Gateway
- D. IPSEC

Answer: B

Explanation:

All this is facilitated using Application Programming Interfaces, APIs are typically the underlying communications method for components within a cloud. some of which (or an entirely different set) are exposed to the cloud user to manage their resources and configurations. Most cloud APIs these days use REST (Representational State Transfer). which runs over the HTTP protocol, making it extremely well suited for Internet services.

Ref: CSA Security Guidelines V4.0

NEW QUESTION # 255

According to NIST, what is cloud computing defined as?

- A. A model for more-efficient use of network-based resources
- B. Services that are delivered over the Internet to customers
- **C. A model for on-demand network access to a shared pool of configurable resources**
- D. A shared set of resources delivered over the Internet

Answer: C

Explanation:

NIST defines cloud computing as on-demand network access to a shared pool of configurable resources, aligning with the essential characteristics of cloud services. Reference: [Security Guidance v5, Domain 1 - Cloud Computing Models]

NEW QUESTION # 256

What is a common characteristic of default encryption provided by cloud providers for data at rest?

- A. It always requires the customer's own encryption keys
- **B. It uses the cloud provider's keys, often at no additional cost**
- C. It does not support encryption for data at rest
- D. It is not available without an additional premium service

Answer: B

Explanation:

Many cloud providers offer default encryption for data at rest, which is typically enabled automatically for data stored within the cloud. In these cases, the encryption is often done using the cloud provider's keys as part of the provider's security infrastructure, and it is usually provided at no additional cost to the customer.

This ensures that data is protected while at rest, reducing the risk of unauthorized access.
