VCEPrep hires the top industry experts to draft the Professional ChromeOS Administrator Exam (ChromeOS-Administrator) exam dumps and help the candidates to clear their Professional ChromeOS Administrator Exam (ChromeOS-Administrator) exam easily. VCEPrep plays a vital role in their journey to get the ChromeOS-Administrator certification.

Google Professional ChromeOS Administrator Exam Sample Questions (Q54-Q59):

NEW QUESTION # 54

An organization has created organization units within the Google Admin console for additional management structure. What is the most effective way to manage each OU while not affecting the top-level OU policy?

- A. Override the inheritance for a given policy
- B. Disable auto updates
- C. Force inheritance from top level OU to all OUs
- D. Delete sublevel OUs and only work from the top level OU

Answer: A

Explanation:

To apply specific settings to a sub-OU without affecting the parent OU or top-level policy, you should override the inheritance for that particular policy. This approach ensures that the sub-OU has customized settings while the parent OU policies remain intact.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console OU Management Guide, which recommends overriding inherited policies for specific OUs when unique settings are required.

"To apply distinct settings to an OU without affecting higher-level OUs, override the inherited settings. This approach keeps parent policies intact." Overriding inheritance is essential for managing diverse device groups within large organizations, allowing flexibility in policy application.

Objectives:

- * Customize OU settings efficiently.
- * Maintain organizational policy consistency.

NEW QUESTION # 55

Which feature of the Google Admin console allows you to restrict devices from remembering user passwords?

- A. WebAuthn
- B. Security Token Removal
- C. Password Manager
- D. Enrollment Permissions

Answer: C

Explanation:

The Password Manager feature in the Google Admin console allows administrators to manage whether users can save and auto-fill passwords on ChromeOS devices. Disabling Password Manager prevents Chrome from remembering passwords, thus enhancing security by requiring users to enter credentials manually.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Password Policy Guide, which outlines how to manage password saving and auto-fill settings.

"Admins can disable the Chrome Password Manager through the Admin console to ensure that user passwords are not saved locally on the device." This setting is crucial in high-security environments where saving passwords locally might pose a risk.

Disabling Password Manager helps maintain stricter security protocols.

Objectives:

- * Enforce secure password management on ChromeOS devices.
- * Disable auto-fill and password saving.

NEW QUESTION # 56

What are two methods for signing in to a Chrome OS device? Choose 2 answers

- **A. Facebook Connect**
- **B. Single sign-on**
- C. Google Friend Connect
- D. SMS code sent to mobile phone

Answer: A,B

Explanation:

* Single sign-on (SSO): This allows users to sign in to their Chrome OS device using their organizational credentials. This is particularly useful in enterprise or educational settings where users already have an existing account.

* Facebook Connect: This allows users to sign in to their Chrome OS device using their Facebook credentials. This can be convenient for users who are already logged into Facebook on another device.

Options A and C are incorrect:

* SMS code sent to mobile phone: This is not a standard sign-in method for Chrome OS devices.

* Google Friend Connect: This was a social networking service that has been discontinued.

NEW QUESTION # 57

You want to enterprise-enroll a device that has previously been signed in to. What should you do first?

- A. Follow the same steps for enrolling a brand new device
- **B. Wipe the device**
- C. Delete all consumer accounts, and then follow the same steps for enrolling a brand new device
- D. Contact Google support to convert the device into an enterprise device

Answer: B

Explanation:

If a ChromeOS device has previously been signed in to, you must wipe the device (Powerwash) before enrolling it into the enterprise. This ensures that any existing user data and previous configurations are removed, allowing the device to start the enrollment process as new.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Device Enrollment Guide, which specifies that devices must be wiped to remove any previous user associations before enterprise enrollment.

"To enroll a previously used device, perform a factory reset (Powerwash) to ensure it is in a clean state, ready for enterprise enrollment." Wiping the device ensures that it is free from personal settings or residual user data, which might conflict with enterprise policies.

Objectives:

- * Enroll ChromeOS devices in an enterprise environment.
- * Maintain compliance with managed device policies.

NEW QUESTION # 58

As a ChromeOS Administrator, you have been asked to enroll all of your devices into a specific device OU using Zero-Touch Enrollment (ZTE). What are the next steps?

- A. Use a dedicated ZTE Admin account for device enrollment
- B. Generate a ZTE pre-provision enrollment token for your specified user OU
- **C. Give the company domain name to your Chrome Partner to enable ZTF**
- D. Generate a ZTE pre-provision enrollment token directly for your domain root OU
- **E. Generate a ZTE pre-provision enrollment token for your specified device OU**

Answer: C,E

Explanation:

* Generate a ZTE pre-provision enrollment token for your specified device OU: This token associates devices with the specific organizational unit (OU) during enrollment, allowing for easier management and policy application.

* Give the company domain name to your Chrome Partner to enable ZTF: This enables the Zero-Touch Framework, allowing devices to be automatically enrolled as soon as they connect to the internet.

Why other options are incorrect:

* C (Generate token for root OU): While possible, it's not ideal as it doesn't allow for granular control over different device groups.

* D (Generate token for user OU): Zero-Touch Enrollment is specifically for devices, not users.

* E (Use dedicated admin account): While recommended for security, it's not a mandatory step for ZTE.

NEW QUESTION # 59

.....

Some people are worrying about that they cannot operate the windows software and the online test engine of the ChromeOS-Administrator training engine smoothly. We ensure that you totally have no troubles in learning our ChromeOS-Administrator study materials. All small buttons are designed to be easy to understand. Also, the layout is beautiful and simple.
