Salesforce Certified Platform Developer I Sample Questions (Q110-Q115):

NEW QUESTION # 110

A developer wants to handle the click event for a lightningbutton component. The on click attribute for the component references a JavaScript function in which resource in the component bundle?

- A. Handler.js
- **B. Controller.js**
- C. Renderer.js
- D. Helper.js

Answer: B

NEW QUESTION # 111

An org has two custom objects:

* Plan_c, that has a master-detail relationship to the Account object.

* Plan_item_c, that has a master-detail relationship to the plan_C object.

What should a developer use to create a Visualforce section in the Account page layout that displays all of the plan. Account and all of the Plan_item_c records related to those plan_c records.

- A. A standard controller with a custom controller

- B. A standard controller with a controller extension
- C. A custom controller by itself
- D. A controller extension with a custom controller

Answer: B

NEW QUESTION # 112

What is the advantage of Salesforce Lightning?

- A. Uses service side for better handling
- B. Option 3
- C. Option 4
- D. Pre-defined components to give Standard Look and Feel

Answer: D

NEW QUESTION # 113

A developer is creating a Lightning web component to show a list of sales records.

The Sales Representative user should be able to see the commission field on each record. The Sales Assistant user should be able to see all fields on the record except the commission field.

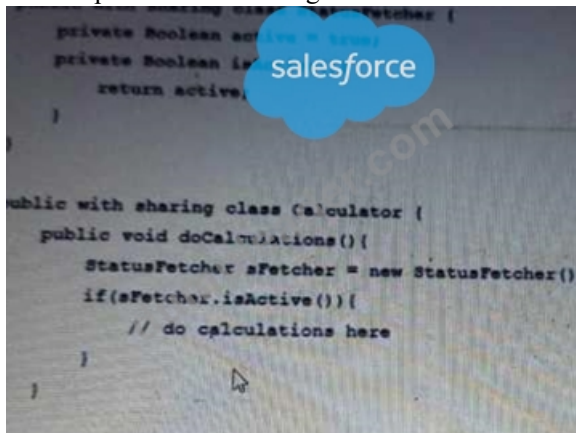

How should this be enforced so that the component works for both users without showing any errors?

- A. Use `Security.stripInaccessible` Le to remove fields inaccessible to the current user.
- B. Use Lightning Locker Service to enforce sharing rules and field-level security.
- C. Use Lightning Data Service to get the collection of sales records.
- D. Use `WITH SECURITY_ENFORCED` In the SOQL that fetches the data for the component,

Answer: A

NEW QUESTION # 114

A developer wrote the following two classes:

```

private Boolean isActive() {
    private Boolean isActive() {
    private Boolean isActive() {
    return active;
}

public with sharing class Calculator {
    public void doCalculations() {
        StatusFetcher sFetcher = new StatusFetcher();
        if(sFetcher.isActive()) {
            // do calculations here
        }
    }
}

```

The StatusFetcher class successfully compiled and saved. However, the Calculator class has a compile time error.

How should the developer fix this code?

- A. Change the class declaration for the statusFetcher class to public with inherited sharing.
- B. Change the class declaration for the Calculator class to public with inherited sharing.
- C. Make the `isActive` method in the StatusFetcher class public.
- D. Make the `doCalculations` method in the Calculation class private.

Answer: C

NEW QUESTION # 115
