

New CRT-450 Test Guide Online 100% Pass | Professional CRT-450: Salesforce Certified Platform Developer I 100% Pass

BONUS!!! Download part of TroytecDumps CRT-450 dumps for free: <https://drive.google.com/open?id=1wSKQmbk6YMsIwQhpj1E0FHiaQB4FKHBE>

Our CRT-450 guide torrent has gone through strict analysis and summary according to the past exam papers and the popular trend in the industry and are revised and updated according to the change of the syllabus and the latest development conditions in the theory and the practice. The CRT-450 exam questions have simplified the sophisticated notions. The software boosts varied self-learning and self-assessment functions to check the learning results. The software of our CRT-450 Test Torrent provides the statistics report function and help the students find the weak links and deal with them.

Salesforce CRT-450 certification is a valuable credential for developers who want to enhance their career opportunities and demonstrate their expertise in developing custom applications on the Salesforce platform. Certified professionals are recognized by employers and peers as experts in the field, and are often sought after for their skills and knowledge.

To prepare for the Salesforce CRT-450 exam, candidates can take advantage of several resources provided by Salesforce. The official Salesforce Certification website offers a variety of study materials, including study guides, practice exams, and hands-on training courses. Additionally, there are several online communities and user groups that provide valuable tips and resources for preparing for the exam.

Salesforce CRT-450 is a globally recognized certification exam for developers who want to validate their skills in developing and deploying custom applications on the Salesforce platform. The Salesforce Certified Platform Developer I certification is the first step in the Salesforce developer certification track and is designed for individuals with knowledge of basic programming concepts and experience in developing applications using a programming language.

Marvelous Salesforce CRT-450: Salesforce Certified Platform Developer I Test Guide Online - 100% Pass-Rate TroytecDumps Practice CRT-450 Online

Our TroytecDumps web-based practice exam helps you boost your confidence with real Salesforce Dumps questions. Built-in tracker saves all practice exam attempts to point out mistakes. This feature helps you to improve your Salesforce Certified Platform Developer I (CRT-450) exam knowledge and skills. You can attempt this Salesforce web-based practice test on all operating systems, including Mac, Linux, iOS, Windows, and Android.

Salesforce Certified Platform Developer I Sample Questions (Q219-Q224):

NEW QUESTION # 219

A Developer wants to get access to the standard price book in the org while writing a test class that covers an OpportunityLineItem trigger.

Which method allows access to the price book?

- A. Use `Test.getStandardPricebookId()` to get the standard price book ID.
- B. Use `@TestVisible` to allow the test method to see the standard price book.
- C. Use `Test.loadData()` and a Static Resource to load a standard price book.
- D. Use `@IsTest(SeeAllData=true)` and delete the existing standard price book.

Answer: A

Explanation:

Explanation/Reference:

NEW QUESTION # 220

A developer has the controller class below.

```
public with sharing class myFooController {  
    public integer prop { get; private set; }  
}
```

Which code block will run successfully in an execute anonymous window?

- A. `myFooController m = new myFooController(); System.assert(m.prop != null);`
- B. `myFooController m = new myFooController(); System.assert(m.prop == 1);`
- C. `myFooController m = new myFooController(); System.assert(m.prop == null);`
- D. `myFooController m = new myFooController(); System.assert(m.prop == 0);`

Answer: C

NEW QUESTION # 221

A developer at Universal Containers is tasked with implementing a new Salesforce application that must be able to be maintained completely by their company's Salesforce administrator.

Which three options should be considered for building out the business logic layer of the application? (Choose three.)

- A. Scheduled Jobs
- B. Invocable Actions
- C. Process Builder
- D. Workflows
- E. Validation Rules

Answer: C,D,E

NEW QUESTION # 222

A developer is creating a Lightning web component to show a list of sales records.

The Sales Representative user should be able to see the commission field on each record. The Sales Assistant user should be able to see all fields on the record except the commission field.

How should this be enforced so that the component works for both users without showing any errors?

- A. Use `security.stripInaccessible` to remove fields inaccessible to the current user.
- B. Use with `8ECTOITYJ2WFORCED` in the SOQL that fetches the data for the component.
- C. Use Lightning Data Service to get the collection of sales records.
- D. Use Lightning Locker Service to enforce sharing rules and field-level security.

Answer: A

Explanation:

To ensure that the component works for both users without showing errors due to field-level security, the developer should handle field accessibility programmatically.

Option D: Use `Security.stripInaccessible` to remove fields inaccessible to the current user.

Correct Answer.

The `Security.stripInaccessible` method can be used in Apex to remove fields from `SObjects` that the current user doesn't have access to.

When data is fetched using SOQL, the method can be applied to ensure that inaccessible fields are not included, preventing any security exceptions when the component tries to display them.

This method enforces field-level security and prevents exposure of inaccessible data.

Usage:

```
// Apex Controller
public with sharing class SalesRecordsController {
    @AuraEnabled(cacheable=true)
    public static List<Sales_Record__c> getSalesRecords() {
        List<Sales_Record__c> records = [SELECT Id, Name, Commission__c, Other_Field__c FROM Sales_Record__c]; return
        (List<Sales_Record__c>) Security.stripInaccessible(AccessType.READABLE, records);
    }
}
```

`WITH SECURITY_ENFORCED` enforces field and object level security in SOQL queries.

If a field is not accessible to the user, the query will throw an exception, which may cause errors in the component.

It does not remove inaccessible fields; it enforces security by failing the query.

Option B: Use Lightning Locker Service to enforce sharing rules and field-level security.

Incorrect.

Lightning Locker Service provides security for components but does not enforce sharing rules or field-level security.

Option C: Use Lightning Data Service to get the collection of sales records.

Not Sufficient Alone.

Lightning Data Service respects field-level security but may still cause errors if the component tries to access fields the user cannot see.

Additional handling is needed to prevent errors.

Conclusion:

To ensure the component works for both users and respects field-level security without causing errors, the developer should use `Security.stripInaccessible`, which is Option D.

Reference:

`stripInaccessible` Method

Enforcing CRUD and FLS

Incorrect Options:

Option A: Use `WITH SECURITY_ENFORCED` in the SOQL that fetches the data for the component.

Not Sufficient Alone.

NEW QUESTION # 223

Which scenario is valid for execution by unit tests?

- A. Load data from a remote site with a callout.
- B. Set the created date of a record using a system method.
- C. Execute anonymous Apex as a different user.
- **D. Generate a Visualforce PDF with `getContentAsPDF()`.**

Answer: D

Explanation:

Unit Test Scenarios:

Option B is valid because `getContentAsPDF()` can generate PDF content for testing purposes.

Why Not Other Options?

A: Unit tests cannot execute anonymous Apex as a different user.

C: Unit tests cannot perform callouts unless mock responses are provided.

D: The `System.createdDate` field cannot be set manually in unit tests.
