ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q18-Q23):

NEW QUESTION # 18

Which work experience is likely to develop the necessary skills to effectively test a software system? [3]

- A. Being the developer of testing tools used for automation
- B. Being the current Project Manager for the system
- C. Being a former Test Manager
- D. Being a member of the production group that supported the previous release of the system

Answer: A

Explanation:

Being the developer of testing tools used for automation is likely to develop the necessary skills to effectively test a software system because it involves a deep understanding of testing processes and the creation of tools that facilitate these processes. This experience provides insight into the intricacies of test automation, which is crucial for designing effective tests and ensuring thorough coverage of the system under test.

References: The current page suggests referring to the ISTQB Advanced Level Test Manager Syllabus and other ISTQB documents for a comprehensive understanding of the roles and skills required for effective software testing. It emphasizes the importance of alignment of methodologies in distributed testing models, which is relevant to the development and use of testing tools.

NEW QUESTION # 19

Test results are reported as "Requirements tested, passed, and failed".

What test strategy are you using?[1]

- A. Model-based
- B. Exploratory
- **C. Analytical**
- D. Reactive

Answer: C

Explanation:

An analytical test strategy is a test strategy that is based on the analysis of the factors that affect the quality of the software under test, such as the requirements, the risks, the complexity, or the criticality¹. An analytical test strategy uses these factors to define the test objectives, scope, approach, and techniques, as well as to prioritize and allocate the test resources². Reporting the test results as "Requirements tested, passed, and failed" implies that the testing is driven by the requirements, which are the specifications of the desired features and functions of the software under test. Testing based on the requirements is an example of an analytical test strategy, as it uses the requirements as the main factor to guide the testing activities. Therefore, option C is the correct answer. Option A is incorrect because a model-based test strategy is a test strategy that uses models to represent the desired behavior and structure of the software under test, and to derive test cases, test data, test procedures, and test oracles. A model-based test strategy does not necessarily report the test results as "Requirements tested, passed, and failed", as it may use other types of models, such as state diagrams, data flow diagrams, or decision tables, to generate and execute the tests. Option B is incorrect because an exploratory test strategy is a test strategy that uses the tester's knowledge, skills, and creativity to design and execute tests dynamically, without predefined test cases or test procedures. An exploratory test strategy does not report the test results as "Requirements tested, passed, and failed", as it does not follow a formal or structured testing process, but rather relies on the tester's intuition, experience, and feedback. Option D is incorrect because a reactive test strategy is a test strategy that uses the actual behavior and results of the software under test to design and execute tests, without prior knowledge or documentation of the software. A reactive test strategy does not report the test results as "Requirements tested, passed, and failed", as it does not have any requirements or specifications to compare the software against, but rather uses the software itself as the test basis. NEW QUESTION # 20

Which of statement about defect management is TRUE?

- A. A good defect management committee reduces the importance of a defect management tool
- B. Cross-functional defect management is important, but only for defects at the higher severity levels
- **C. A defect management committee should consider the benefits, risks and costs associated with fixing a defect**
- D. All projects should have a full-time defect manager to follow up decisions made about defects

Answer: C

Explanation:

Defect resolution should consider benefits, costs, and risks to determine if fixing is justified.

"Defects should be tracked from discovery to resolution... This process must be agreed with all those participating in defect

management... including classification and resolution decisions."

NEW QUESTION # 21

Part of the testing strategy indicates that you are going to be using systematic test design techniques. Your manager has asked that you present the main advantages of using these techniques at the next board meeting. Identify THREE main benefits of using systematic test design techniques within this company. 2 credits (for 2 out of 3 correct 1 credit)

- A. Targets certain types of faults
- B. Will make non-systematic testing redundant
- C. Easier to quickly adapt testing to changing requirements compared to experienced-based testing
- D. Provides a way to differentiate depth of testing based on product risks by using different techniques
- E. Will guide experienced testers to find defects
- F. More enhanced documentation and therefore higher repeatability and reproducibility
- G. Will reduce the need for early reviews

Answer: A,D,F

NEW QUESTION # 22

Which of the following Is considered a heavyweight risk-based testing technique'

- A. Brainstorming
- B. Pragmatic risk analysts
- C. Systematic software testing
- D. Hazard analysis

Answer: D

Explanation:

* Context Analysis:

* Heavyweight risk-based techniques involve thorough, detailed analyses to identify and mitigate potential risks comprehensively.

* Hazard analysis is a structured method to identify and address risks, commonly used in safety- critical domains.

* Evaluation of Options:

* A. Systematic software testing:

* Incorrect. While methodical, it is not inherently a risk-based technique.

* B. Pragmatic risk analysis:

* Incorrect. This is a lightweight technique emphasizing practical application over detailed analysis.

* C. Brainstorming:

* Incorrect. While useful for generating ideas, it is not detailed enough to qualify as heavyweight.

* D. Hazard analysis:

* Correct. It is a formal and comprehensive approach, qualifying as a heavyweight technique.

* Syllabus Alignment:

* ISTQB highlights hazard analysis as a detailed, structured risk-based technique (TM-1.3.4).
