ISTQB CTAL_TM_001 Exam Syllabus Topics:

Topic	Details
Topic 1	• Managing the Product: This section of the exam measures the skills of a Test Analyst and focuses on the artefacts under test and the metrics that describe them. Examinees show how to define and collect test metrics to monitor quality and progress, estimate effort and resources for different test scopes, and organize defect management workflows that fit sequential, iterative, or hybrid lifecycles. The aim is to ensure test outcomes align with objectives and inform stakeholders through clear reporting, while using estimation techniques and defect data to guide ongoing test and process improvements.
Topic 2	• Managing the Test Activities: This section of the exam measures the skills of a Test Manager and covers the end-to-end coordination of testing work. Candidates must demonstrate how to plan testing—defining objectives, scope, resources, schedule, and risk treatments—then how to monitor progress against those plans, control deviations through corrective actions, and conclude testing with completion reports, archival of testware, and lessons-learned sessions. The syllabus also explores tailoring test activities to project context, applying risk-based testing to focus effort where it matters most, shaping a coherent project test strategy, leading process-improvement initiatives, and selecting and managing test tools throughout their lifecycle.
Topic 3	• Managing the Team: This section of the exam measures the skills of a Test Lead and addresses the human side of test management. Candidates must demonstrate how to identify the skills required for each project, assess and develop team competence, and apply motivating leadership practices. The syllabus also covers stakeholder relationship management, understanding interests and influence, articulating the business case for testing, and balancing cost-of-quality considerations to ensure testing is properly resourced, communicated, and valued within the wider project.

How to Prepare For CTAL-TM Certification Exam

Preparation Guide for CTAL-TM Certification Exam

Introduction to CTAL-TM Exam

Certified Tester Advanced Level Test Manager(CTAL-TM), This is a rigorous professional certification program based on exams. The CTAL-TM certification is offered to candidates who pass the Tester Advanced Level Test Manager(CTAL-TM) of the International Board of Software Testing Qualifications (ISTQB).

This ISTQB course is intended for testing professionals who want to excel in a management or lead role. In this course, students will learn how to administer a testing project and execute a risk-based technique for testing. Students will also be examining how a technique correlates with test estimation, monitoring, and planning. During this course, students will learn how to send report to stakeholders, build successful test teams and implement significant test plans

The creation of the ISTQB exams is the responsibility of the councils of each member country so that they better reflect the language, use and specific conditions of the country. Unlike other English-based ISTQB exams that you can find, ASTQB exams are created as original exams for English speakers, not translated from another language. US employers recognize this and have expressed their preference for evaluators who have passed the ASTQB ISTQB exams.

Our world-renowned subject matter experts have worked very hard to create the ASTQB versions of the ISTQB exams and we believe that our exams are of the highest quality, without difficult questions. This gives you a better exam experience.

ISTQB Test Manager certification takes aspirants career to the next level. This certification adds a great value to candidates skills and demonstrates their commitment to the testing profession and lead others as a manager in the organization. Certified professionals are recognized as an expert in software testing, quality, and project management.

Under your guidance, the team profile is raised as more effective and efficient in testing by practicing methods and techniques included in the Test Manager Certification series.

An Advanced Test Manager would be able to :

- Create and implement test plans consistent with organizational policies and test strategies.
- Identify skills and resource gaps in their test team and participate in sourcing adequate resources.
- Propose a business case for test activities which outlines the costs and benefits expected.
- Organize and lead risk identification and risk analysis sessions and use the results of such sessions for test estimation, planning, monitoring and control.
- Continuously monitor and control the test activities to achieve project objectives.
- Ensure proper communication within the test team and with other project stakeholders.
- Identify and plan necessary skills development within their test team.
- Assess and report relevant and timely test status to project stakeholders.
- Manage a testing project by implementing the mission, goals and testing processes established for the testing organization.

ISTQB Certified Tester Advanced Level - Test Manager Sample Questions (Q231-Q236):

NEW QUESTION # 231

It the test manager must repeatedly step in to resolve conflicts within the team what phase is the team in and what competencies are required from the test manager?

- A. Norming Personal
- B. Performing Methodological
- C. Storming Social
- D. Forming Professional

Answer: C

Explanation:

Understanding Team Development Phases:

The Storming phase is where team members often experience conflicts as they establish their roles and relationships. Resolving conflicts in this phase is essential for team cohesion and productivity.

Competencies Required:

Social competencies are needed to mediate, facilitate communication, and encourage collaboration.

Evaluation of Options:

A . Forming Professional:

Incorrect. The Forming phase involves team orientation, not conflict resolution.

B . Storming Social:

Correct. This phase requires social skills to address conflicts and foster a productive environment.

C . Norming Personal:

Incorrect. The Norming phase focuses on team cohesion and process standardization.

D . Performing Methodological:

Incorrect. The Performing phase assumes the team is high-functioning and requires minimal intervention.

Syllabus Alignment:

ISTQB emphasizes understanding team dynamics and applying social skills for effective team management during challenging phases (TM-3.1.5).

NEW QUESTION # 232

In addition to risk, identify TWO other components of a testing strategy. 1 credit

- A. Test training needs for the project resources
- B. The test schedule
- C. The test design techniques to be used
- D. Test performance indicators
- E. The entry and exit criteria for each test phase

Answer: C,E

NEW QUESTION # 233

Which THREE activities would be valid steps during the development of the test strategy? 2 credits (2 out of 3 correct 1 credit)

- A. Assess the testing that needs to be done to minimize the risks
- B. Define a master test plan template
- C. Understand the software development life cycle used by the software house
- D. Identify test staff members that will be involved in the system test
- E. Perform a project risk analysis
- F. Define test career paths
- G. Issue the test strategy document for review

Answer: A,C,G

NEW QUESTION # 234

What is the Risk Priority Number for risk item number 2? 2 credits

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

NEW QUESTION # 235

You have directed one of your testers to construct a "smoke test" to execute against new builds prior to starting formal testing. This

is an example of which software development lifecycle activity?

[1]

- A. Project management
- B. Technical support
- C. Software development and maintenance
- **D. Change and configuration management**

Answer: D

Explanation:

The correct answer is C. Change and configuration management. This is because a smoke test is a type of test that checks the basic functionality and stability of a new build before proceeding to more detailed testing. A smoke test is an example of change and configuration management, which is the activity of controlling and tracking the changes made to the software and its configuration items throughout the software development lifecycle.
