

New CTFL4 Test Preparation, CTFL4 Exams

BONUS!!! Download part of Real4test CTFL4 dumps for free: <https://drive.google.com/open?id=1f6KNZRMyz7S7IHJdOCXN4wMQn2R1mTFn>

Attempting these CTFL4 practice test questions, again and again, enhances your learning and eliminates errors in your readiness for the ISTQB Certified Tester Foundation Level CTFL 4.0 certification exam. Customization features of ISTQB Certified Tester Foundation Level CTFL 4.0 (CTFL4) practice test software give you chance to adjust the settings of the ISTQB Certified Tester Foundation Level CTFL 4.0 (CTFL4) practice exams sessions. Windows laptops and PCs support the desktop-based software of the BCS CTFL4 practice test. These ISTQB Certified Tester Foundation Level CTFL 4.0 (CTFL4) practice exams create situations that replicate the actual CTFL4 exam.

Real4test CTFL4 valid test will assist you to pass your CTFL4 actual test with ease. You will never regret to choose our CTFL4 exam engine test. Here are some outstanding properties which can benefit all of you. The detailed explanations are offered where available to ensure you fully understand why to choose the correct answers. All the questions cover the main points which the CTFL4 Actual Exam required. The answers of each question are correct and verified by our IT experts which can ensure you 100% pass.

New CTFL4 Test Preparation 100% Pass | Valid CTFL4 Exams: ISTQB Certified Tester Foundation Level CTFL 4.0

Practice on BCS CTFL4 practice test software improves your problem-solving skills and enables you to complete the BCS CTFL4 exam within the time set. Practice with CTFL4 practice test software to increase your capability to understand the queries and solve them quickly during the CTFL4 Exam. Real4test is a reliable platform, offering BCS CTFL4 pdf questions and practice tests for the last many years. Thousands of candidates have already used them for their BCS CTFL4 exam preparation and gave positive feedback.

BCS ISTQB Certified Tester Foundation Level CTFL 4.0 Sample Questions (Q156-Q161):

NEW QUESTION # 156

Which of the following statements about the typical activities of a formal review process is TRUE?

- A. Various review techniques that may be applied by participants during individual review are described in the ISO/IEC/IEEE 29119-3 standard.
- **B. Choosing which standards to follow during the review process is usually made during review planning.**
- C. One of the main goals of the review meeting is to make sure that all participants are aware of their roles and responsibilities in the review process
- D. Individual review is only mandatory when the size of the work product under review is too large to cover at the review meeting

Answer: B

Explanation:

During the review planning stage, key decisions are made, including the selection of standards and procedures to be followed during the review. This planning phase ensures that the review process is structured and adheres to agreed-upon standards, which can come from industry standards such as ISO/IEC/IEEE 29119-3. The ISTQB CTFL Syllabus v4.0 emphasizes the importance of review planning in establishing the framework and guidelines for the review process.

NEW QUESTION # 157

Which ONE of the following options MOST ACCURATELY describes statement testing?

- **A. In statement testing, the coverage items are executable statements. The aim is to design test cases that exercise statements in the code until an acceptable level of coverage is achieved, expressed as a percentage.**
- B. In statement testing, the coverage items are decisions and statements. The aim is to design test cases that exercise statements in the code until an acceptable level of coverage is achieved, expressed as a percentage.
- C. In statement testing, the coverage items are branches, and the aim is to design test cases to exercise branches in the code until an acceptable level of coverage is achieved, expressed as a percentage.
- D. In statement testing, the coverage items are control flow transfers between branches. The aim is to design test cases to exercise branches in the code until an acceptable level of coverage is achieved, expressed as a percentage.

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation: Statement testing aims to execute every executable statement in the source code at least once.

* (D) is incorrect as statement testing ensures maximum statement execution.

* (A) describes branch testing, which focuses on flow transfers.

* (B) and (C) incorrectly mix decision testing and branch testing concepts.

NEW QUESTION # 158

In which of the following test documents would you expect to find test exit criteria described?

- **A. Test plan**
- B. Test design specification
- C. Requirements specification
- D. Project plan

Answer: A

Explanation:

Test exit criteria are the conditions that must be fulfilled before concluding a particular testing phase. These criteria act as a checkpoint to assess whether we have achieved the testing objectives and are done with testing¹. Test exit criteria are typically defined in the test plan document, which is one of the outputs of the test planning phase. The test plan document describes the scope, approach, resources, and schedule of the testing activities. It also identifies the test items, the features to be tested, the testing tasks, the risks, and the test deliverables². According to the ISTQB Certified Tester Foundation Level Syllabus v4.0, the test plan document should include the following information related to the test exit criteria³:

The criteria for evaluating test completion, such as the percentage of test cases executed, the percentage of test coverage achieved, the number and severity of defects found and fixed, the quality and reliability of the software product, and the stakeholder satisfaction.

The criteria for evaluating test process improvement, such as the adherence to the test strategy, the efficiency and effectiveness of the testing activities, the lessons learned and best practices identified, and the recommendations for future improvements.

Therefore, the test plan document is the most appropriate test document to find the test exit criteria described. The other options, such as test design specification, project plan, and requirements specification, are not directly related to the test exit criteria. The test design specification describes the test cases and test procedures for a specific test level or test type³. The project plan describes the overall objectives, scope, assumptions, risks, and deliverables of the software project⁴. The requirements specification describes the functional and non-functional requirements of the software product⁵. None of these documents specify the conditions for ending the testing process or evaluating the testing outcomes. NEW QUESTION # 159

Which of the following statements about retrospectives is TRUE?

- A. During retrospectives, in addition to identifying relevant process improvements, participants should also consider how to implement these improvements and retain them based on the context of the project, such as the software development lifecycle.
- B. On Agile projects, well-conducted retrospectives at the end of each iteration can help the team reduce and sometimes even eliminate the need for daily stand-up meetings.
- C. Only developers and testers should be involved in retrospectives, as involving people in other roles is very likely to prevent developers and testers from having open and constructive discussions that really help identify process improvements.
- D. Retrospectives can be very effective in identifying process improvements and can also be very efficient and cost-effective especially since, unlike reviews, they do not require any follow-up activities

Answer: A

Explanation:

Retrospectives are a crucial part of Agile practices, aiming to identify process improvements and determine how to implement them effectively. They should involve participants discussing not only what improvements could be made but also how to integrate and sustain those improvements within the project context, including the software development lifecycle. This makes statement D accurate according to the ISTQB CTFL syllabus.

NEW QUESTION # 160

Which one of the following is a typical entry criteria for testing?

- A. The number of estimated remaining defects is sufficiently low.
- B. Planned tests have been executed.
- C. The number of unresolved defects is within an agreed limit.
- D. Availability of testable requirements.

Answer: D

Explanation:

A typical entry criterion for testing is the availability of testable requirements. Testable requirements provide a basis for designing and executing test cases. Without clear and testable requirements, it is challenging to determine what needs to be tested and to create effective test cases. Entry criteria ensure that the necessary preconditions are met before testing begins, which helps in conducting efficient and effective testing.
