Ethics-In-Technology Pass Leader Dumps - Training Ethics-In-Technology Material

We are all well aware that a major problem in the industry is that there is a lack of quality study materials. Our Ethics-In-Technology braindumps provides you everything you will need to take a certification examination. Details are researched and produced by

Ethics-In-Technology Dumps Experts who are constantly using industry experience to produce precise, logical verify for the test. You may get Ethics-In-Technology exam dumps from different web sites or books, but logic is the key.

WGU Ethics In Technology QCO1 Sample Questions (Q58-Q63):

NEW QUESTION # 58

A tech worker's computer acts abnormally shortly after the worker starts their shift. The computer is up-to-date on all relevant patches and updates. The installed antivirus software has not identified any malicious code. During the investigation, the worker discovers that an attacker compromised the system, even though the worker did not engage in any behavior that could have introduced a virus or other external malicious software into the computer.

Which method of attack was used to compromise the worker's machine?

- A. Zero-day exploit
- B. Spear phishing
- C. Trojan horse
- D. Blended threat

Answer: A

Explanation:

A zero-day exploit is a cyberattack that takes advantage of an unknown vulnerability in software, firmware, or hardware before a patch is available.

Key characteristics of a zero-day exploit:

- * The system was up-to-date on all patches and updates, meaning no known vulnerabilities should have been present.
- * The antivirus did not detect any malicious code, which suggests that the attack exploited an unknown flaw.
- * The worker did not engage in any behavior that introduced malware, ruling out traditional malware delivery methods.

Since zero-day exploits target vulnerabilities that have not yet been discovered or fixed, the attack likely bypassed existing security defenses.

* A. Blended Threat: A combination of multiple attack methods (e.g., worms, Trojans, and phishing), but the scenario suggests a single point of failure.

* B. Trojan Horse: Requires the worker to unknowingly install malicious software, which was not the case here.

* C. Spear Phishing: Involves a targeted deceptive email, but there is no indication that the worker clicked on a fraudulent link or downloaded a malicious file.

Why Not the Other Options? Thus, the correct answer is D. Zero-day exploit as it best explains the system compromise despite all security measures being up to date.

* Schneier, B. (2015). Data and Goliath: The Hidden Battles to Collect Your Data and Control Your World.

* Mitre ATT&CK Framework - Zero-day Exploits.

* OWASP Top Ten Security Risks (2023).

References in Ethics in Technology:

NEW QUESTION # 59

To gather data for improved customer profiles, a social media platform uses microphone data from its users in the United States. Which U.S. Constitutional amendment does this action violate?

- A. First Amendment
- B. Second Amendment
- C. Third Amendment
- D. Fourth Amendment

Answer: D

NEW QUESTION # 60

To establish an expectation among consumers that a professional will behave ethically, a nonprofit society publishes a professional code of ethics. Which benefit can be directly derived from this effort?

- A. Evaluation benchmark
- B. High standards of practice
- C. Public trust and respect

- D. Principled decision-making

Answer: C

Explanation:

By publishing a professional code of ethics, a nonprofit society establishes ethical expectations, increasing public confidence in the profession. Ethical codes demonstrate a commitment to integrity, fairness, and responsible conduct, fostering public trust in professionals.

- * ACM & IEEE Codes of Ethics - Promote ethical awareness and public accountability.
- * Corporate Social Responsibility (CSR) & Ethics in IT - Organizations gain public trust by adopting ethical guidelines.
- * Virtue Ethics (Character & Reputation) - A professional code reinforces moral credibility and public respect.
- * Stakeholder Theory (Freeman, 1984) - Ethical practices benefit consumers, employees, and society.

Relevant Ethical References in Technology: Thus, the correct answer is B. Public trust and respect, as publishing a professional code of ethics reassures consumers and strengthens the profession's credibility.

NEW QUESTION # 61

To gather data for improved customer profiles, a social media platform uses microphone data from its users in the United States. Which U.S. Constitutional amendment does this action violate?

- A. First Amendment
- B. Second Amendment
- C. Third Amendment
- **D. Fourth Amendment**

Answer: D

Explanation:

The Fourth Amendment to the U.S. Constitution protects individuals from unreasonable searches and seizures by the government or entities acting in ways that violate privacy rights. When a social media platform collects microphone data without explicit consent, it potentially infringes on users' reasonable expectation of privacy, raising Fourth Amendment concerns.

While the Fourth Amendment traditionally applies to government actions, legal debates have emerged over whether private companies collecting excessive personal data should be subject to similar scrutiny under privacy laws and regulations such as the Electronic Communications Privacy Act (ECPA) and the Stored Communications Act (SCA).

- * Fourth Amendment & Digital Privacy (Carpenter v. United States, 2018) - The U.S. Supreme Court ruled that warrantless collection of personal digital data can violate the Fourth Amendment.
- * Ethical Data Collection & Consent (GDPR, CCPA) - Using microphone data without user consent is ethically and legally questionable.
- * Big Tech & Surveillance Ethics - Ethical concerns arise when tech companies engage in excessive data collection without transparency.
- * Deontological Ethics (Duty to Respect Privacy) - Data collection should prioritize user rights over profit-driven surveillance.

Relevant Ethical References in Technology: Thus, the correct answer is B. Fourth Amendment, as the company's actions raise concerns about unlawful data collection and digital privacy violations.

NEW QUESTION # 62

A factory manager must decide whether to replace assembly-line workers with robots but is concerned about employees losing their jobs. The factory manager also believes this automation would enhance worker safety, save the factory money, raise corporate profits, and lower the prices of goods produced. The factory manager weighs all possible outcomes and chooses the action that produces the greatest good.

Which ethical theory does this approach represent?

- **A. Consequentialism**
- B. Virtue
- C. Deontology
- D. Relativism

Answer: A

NEW QUESTION # 63

.....

In the present situation, you will find companies laying off their employees without any notice or prior information. They are just receiving an email and the next moment they have no access to the company network. So to avoid all this, you have to keep yourself updated with the new version of technologies and applications. You have to become one of WGU Ethics In Technology QCO1 (Ethics-In-Technology) certification holders who survived the laying off situation and are still in a great position in their company. You cannot afford to lose it when you need your job the most.
