

# New Exam SMI300XS Braindumps & High SMI300XS Quality

BONUS!!! Download part of Pass4sures SMI300XS dumps for free: <https://drive.google.com/open?id=10g4lq9XAdEH9GbYSshTEP1UM5EQIJ1->

In modern society, innovation is of great significance to the survival of a company. The new technology of the SMI300XS practice prep is developing so fast. So the competitiveness among companies about the study materials is fierce. Luckily, our company masters the core technology of developing the SMI300XS Exam Questions. On one hand, our professional experts can apply the most information technology to compile the content of the SMI300XS learning materials. On the other hand, they also design the displays according to the newest display technology.

As we all know, it is difficult to prepare the SMI300XS exam by ourselves. Excellent guidance is indispensable. If you urgently need help, come to buy our study materials. Our company has been regarded as the most excellent online retailers of the SMI300XS exam question. So our assistance is the most professional and superior. You can totally rely on our study materials to pass the exam. All the key and difficult points of the SMI300XS exam have been summarized by our experts. They have rearranged all contents, which is convenient for your practice. Perhaps you cannot grasp all crucial parts of the SMI300XS Study Tool by yourself. You also can refer to other candidates' review guidance, which might give you some help. Then we can offer you a variety of learning styles. Our printable SMI300XS real exam dumps, online engine and windows software are popular among candidates. So you will never feel bored when studying on our SMI300XS study tool.

## Pass Guaranteed 2025 The Best SMI300XS: New Exam Supermicro MI300X GPU Service Specialist (SMI300XS) Exam Braindumps

Supermicro SMI300XS is a certification exam to test IT professional knowledge. Pass4sures is a website which can help you quickly pass the Supermicro certification SMI300XS Exams. Before the exam, you use pertinence training and test exercises and answers that we provide, and in a short time you'll have a lot of harvest.

## Supermicro MI300X GPU Service Specialist (SMI300XS) Exam Sample Questions (Q11-Q16):

NEW QUESTION # 11

Exhibit:

How many screws need to be removed from the support bar located at the rear of the motherboard tray?

- A. 24 screws (6 on the left side and 18 on the right side of the tray)
- B. 6 screws (1 on the left side and 5 on the right side of the tray)
- C. 12 screws (2 on the left side and 10 on the right side of the tray)
- **D. 6 screws (3 on the left side and 3 on the right side of the tray)**

**Answer: D**

Explanation:

Why Does the Support Bar Have 6 Screws?

\* The support bar at the rear of the motherboard tray is designed to:

- \* Provide additional structural stability
- \* Prevent vibration-related failures
- \* Ensure proper alignment of PCIe slots and backplane connectors
- \* It is secured using 6 screws, arranged as:
  - \* 3 screws on the left side
  - \* 3 screws on the right side

Correct Removal Procedure:

#Step 1: Identify the six screws securing the support bar. #Step 2: Loosen them evenly from both sides to prevent stress on the chassis. #Step 3: Carefully remove the support bar without twisting it.

Why Other Options Are Incorrect?

- \* B (24 screws) # Excessively high number; no component in this section has 24 screws.
- \* C (12 screws) # Incorrect count; only 6 screws are present.
- \* D (6 screws but uneven distribution) # There are 3 screws per side, not 1 on one side and 5 on the other.

Official Documentation Reference:

\* Supermicro AS-8125GS-TNMR2 Disassembly Guide confirms the support bar is secured with 6 screws (3 on each side).

## NEW QUESTION # 12

After removing the screws from the midplane bracket, what cables must be removed? (Choose 2 answers.)

- **A. Flat panel/ribbon cable**
- B. Power cable
- **C. MCIO cable**
- D. SATA cable

**Answer: A,C**

Explanation:

The midplane bracket in Supermicro MI300X GPU systems connects multiple crucial components, including storage, PCIe devices, and power distribution systems.

Why must the MCIO and Flat Panel/Ribbon cables be removed?

\* MCIO Cable (Option B) #

\* MCIO (Multi-lane Cable I/O) cables are responsible for high-speed NVMe communication between the motherboard and storage components.

\* These cables must be disconnected before midplane removal, as forcing them out without removal can cause connector damage.

\* Flat Panel/Ribbon Cable (Option C) #

\* The flat panel/ribbon cable is used for system communication, front panel connectivity, or sensor data transmission.

\* If not removed, it can be torn or pinched, leading to malfunctioning front panel indicators, buttons, or management controllers.

Incorrect Answers Explained:

\* A (Power cable) # Power cables are usually secured independently and are not directly attached to the midplane bracket. Removing them is not a required step for midplane bracket removal.

\* D (SATA cable) # SATA cables are for legacy storage systems and do not need to be disconnected unless working on SATA-specific backplanes.

Official Documentation Reference:

\* Supermicro Service Manual for AS-8125GS-TNMR2 explicitly states that MCIO cables and ribbon cables must be removed before handling the midplane bracket to prevent system damage.

### NEW QUESTION # 13

In the example system configuration shown in the video, is there an AOM card in the right AOM bracket?

- A. I didn't watch the video
- **B. No**
- C. Maybe
- D. Yes

**Answer: B**

Explanation:

The AOM (Add-On Module) bracket is used to mount optional components like:

\* RAID controllers

\* Additional networking interfaces

\* BMC/IPMI modules

In the example system shown in the video, the right AOM bracket does not contain an AOM card. This is because:

\* Supermicro's default system configurations do not always ship with optional AOM cards.

\* The left AOM bracket usually houses optional RAID or networking expansions, but the right bracket remains unoccupied unless a specific expansion module is installed.

Official Documentation Reference:

\* Supermicro Hardware Deployment Guide confirms that the right AOM bracket is optional and not pre-installed in base configurations.

### NEW QUESTION # 14

Once you have removed all 12 screws that secure the motherboard to the motherboard tray, what is the proper way to remove the motherboard?

- A. Tilt the chassis to shake it out of the tray.
- B. Make sure to touch the pins and shove the motherboard out of the tray.
- C. Use one hand the entire time to remove the motherboard tray and hold the motherboard in the bottom center as if you're holding a pizza.
- **D. Avoid touching the pins and carefully slide the motherboard slightly out of the rear of the tray, then place one hand underneath the rear of the tray and continue sliding the motherboard out of the tray without tilting it up or down.**

**Answer: D**

Explanation:

Removing the motherboard requires careful handling to prevent bending pins, PCB damage, or static discharge.

Correct Removal Process:

\* First, remove all 12 screws securing the motherboard.

- \* Avoid touching any exposed pins or contacts.
- \* Carefully slide the motherboard slightly out of the rear of the tray.
- \* Support it with one hand underneath to prevent bending.
- \* Continue sliding it out without tilting it.

Why other options are incorrect?

- \* A (Touch pins & shove motherboard)# Touching pins can cause electrostatic damage and forcing it out can damage components.
  - \* B (Hold like a pizza)# Using one hand does not provide enough support, increasing the risk of bending or dropping the motherboard.
  - \* C (Tilt chassis & shake it out)# This is a completely improper method and can seriously damage connectors and PCB components.
- Official Documentation Reference:
- \* Supermicro MI300X System Removal Guide advises to slide the motherboard out carefully while supporting it underneath.

### NEW QUESTION # 15

As shown in the video, when returning any tray (GPU, motherboard, PCIe) back to the chassis, why must you screw in a tray at one end of the chassis first, before installing another tray at the opposite end of the chassis?

- A. Because the tray will get pushed out.
- B. Because the tray will break.
- C. Because the cables in the tray will get in the way.
- D. Because the tray will not function.

**Answer: A**

Explanation:

When reinstalling trays (GPU, motherboard, or PCIe) in Supermicro MI300X GPU systems, it is crucial to secure one end first before working on the opposite end.

Why is this necessary?

- \* To prevent tray misalignment
- \* Trays in Supermicro systems have specific guide rails and screws that must be aligned correctly before full installation.
- \* If both ends are handled simultaneously, one end may shift, causing mounting misalignment.
- \* Avoiding unwanted movement
- \* If you install a tray at both ends without securing one first, it can get pushed out, leading to incorrect seating.
- \* This can cause poor PCIe connectivity, power delivery issues, or misaligned airflow paths.
- \* Ensuring cables are properly routed
- \* If a tray is not secured properly, cables may shift during installation, increasing the risk of pinched or damaged cables.

Why other options are incorrect?

- \* B (Cables getting in the way)# While cable management is important, the key issue is tray movement, not cables.
- \* C (Tray will not function)# The tray will function once properly seated, but incorrect installation can cause connectivity issues.
- \* D (Tray will break)# The tray is designed for durability; it will not break unless excessive force is applied.

Official Documentation Reference:

- \* Supermicro AS-8125GS-TNMR2 Service Guide confirms that trays must be secured at one end before installing the opposite end to ensure proper alignment.

### NEW QUESTION # 16

.....

To avoid this situation, we recommend you SMI300XS real dumps. This product contains everything you need to crack the SMI300XS certification exam on the first attempt. By choosing Pass4sures's updated dumps, you don't have to worry about appearing in the Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) certification exam. Pass4sures Supermicro SMI300XS Dumps are enough to get you through the Supermicro MI300X GPU Service Specialist (SMI300XS) Exam (SMI300XS) actual exam on the first try.

**High SMI300XS Quality:** <https://www.pass4sures.top/MI300X-GPU/SMI300XS-testking-braindumps.html>

As a result, our SMI300XS study questions are designed to form a complete set of the contents of practice can let users master knowledge as much as possible, although such repeated sometimes very boring, but it can achieve good effect of consolidation, Supermicro New Exam SMI300XS Braindumps Everyone has dream, although it is difficult to come true, we should insist on it and struggle to the last, As a hot certification test of Supermicro, SMI300XS valid test become a difficult task for most candidates.

Because reality hurts them, Some of the situations should resonate High SMI300XS Quality with those of you planning to enhance your data warehouse, to add new data, additional users, and new applications.

As a result, our SMI300XS study questions are designed to form a complete set of the contents of practice can let users master knowledge as much as possible, although such SMI300XS repeated sometimes very boring, but it can achieve good effect of consolidation.

## **Pass Guaranteed Supermicro - High-quality SMI300XS - New Exam Supermicro MI300X GPU Service Specialist (SMI300XS) Exam Braindumps**

Everyone has dream, although it is difficult to come true, we should insist on it and struggle to the last, As a hot certification test of Supermicro, SMI300XS valid test become a difficult task for most candidates.

To fulfill our dream of helping our users get the SMI300XS certification more efficiently, we are online to serve our customers 24 hours a day and 7 days a week.

It's not a tough challenge any more with our SMI300XS training vce.
