What must be changed to allow the analyst to select Destination Host Name as an attribute?

- A. The Destination Host Name must be selected as a Triggered Attribute.
- B. The Destination Host Name must be added as an Event type in the FortiSIEM.
- C. The Destination IP Event Attribute must be removed.
- D. The Destination Host Name must be set as an aggregate item in a subpattern.

An analyst is troubleshooting the rule shown in the exhibit. It is not generating any incidents, but the filter parameters are generating events on the Analytics tab.

What is wrong with the rule conditions?

- A. The Event Type refers to a CMDB lookup and should be an Event lookup.
- B. The Aggregate attribute is too restrictive.
- C. The Destination Host Name value is not fully qualified.
- D. The Group By attributes restricts which events are counted.

Answer: D

Explanation:

The Group By attributes - Destination IP and User - cause the aggregation (COUNT(Source IP) >= 2) to apply within each unique combination of those groupings. This restricts the count calculation and can prevent the rule from triggering incidents, even if matching events exist in the Analytics tab.

NEW QUESTION # 13

What can you use to send data to FortiSIEM for user and entity behavior analytics (UEBA)?

- A. SNMP
- B. SSH
- C. FortiSIEM agent
- D. FortiSIEM worker

Answer: C

Explanation:

The FortiSIEM agent can be used to send detailed endpoint data such as user activity and process behavior to FortiSIEM, which is essential for performing User and Entity Behavior Analytics (UEBA).
