Quiz 2025 Cisco 100-150: Valid Free Cisco Certified Support Technician (CCST) Networking Exam Questions

If you are still headache about how to choose 100-150 real questions, now stop! Do not be entangled with this thing. We should be the best wise select for every aspiring candidate who is ready for 100-150 exams. We design three formats of our high-quality 100-150 exam questions which satisfy different kinds of candidates' demands: PDF version, Soft Test Engine, Online Test Engine. These 3 formats of our 100-150 training guide contain same questions and answers. Candidates can choose any version of our 100-150 learning prep based on their study habits.

Cisco Certified Support Technician (CCST) Networking Sample Questions (Q19-Q24):

NEW QUESTION # 19
A Cisco PoE switch is shown in the following image. Which type of port will provide both data connectivity and power to an IP phone?

- A. Ports identified with number 7
- B. Ports identified with number 6
- C. Port identified with number 2
- D. Ports identified with numbers 3 and 4

Answer: B

Explanation:
In the provided image of the Cisco PoE switch, the ports identified with number 6 are the standard RJ-45 Ethernet ports typically found on switches that provide both data connectivity and Power over Ethernet (PoE).
PoE ports are designed to supply power to devices such as IP phones, wireless access points, and other PoE- enabled devices directly through the Ethernet cable.
Ports:
*2: Console port (for management and configuration)
*3 and 4: Specific function ports (often for management)
*6: RJ-45 Ethernet ports (capable of providing PoE)
*7: SFP ports (for fiber connections, typically do not provide PoE)
Thus, the correct answer is C. Ports identified with number 6.

NEW QUESTION # 20
You need to connect a computer's network adapter to a switch using a 1000BASE-T cable.
Which connector should you use?

- A. OS2 LC
- B. Coax
- C. RJ-45
- D. RJ-11

Answer: C

Explanation:
* 1000BASE-T Cable: This refers to Gigabit Ethernet over twisted-pair cables (Cat 5e or higher).
* Connector: RJ-45 connectors are used for Ethernet cables, including those used for 1000BASE-T.
* Coax: Used for cable TV and older Ethernet standards like 10BASE2.
* RJ-11: Used for telephone connections.
* OS2 LC: Used for fiber optic connections.
Reference: * Ethernet Standards and Cables: Ethernet Cable Guide

NEW QUESTION # 21
A local company requires two networks in two new buildings. The addresses used in these networks must be in the private network range.
Which two address ranges should the company use? (Choose 2.)
Note: You will receive partial credit for each correct selection.

- A. 192.168.0.0 to 192.168.255.255
- B. 11.0.0.0 to 11.255.255.255
- C. 192.16.0.0 to 192.16.255.255
- D. 172.16.0.0 to 172.31.255.255

Answer: A,D

Explanation:
The private IP address ranges that are set aside specifically for use within private networks and not routable on the internet are as follows:
* Class A: 10.0.0.0 to 10.255.255.255
* Class B: 172.16.0.0 to 172.31.255.255
* Class C: 192.168.0.0 to 192.168.255.255
These ranges are defined by the Internet Assigned Numbers Authority (IANA) and are used for local communications within a private network123.
Given the options: A. 172.16.0.0 to 172.31.255.255 falls within the Class B private range. B. 192.16.0.0 to 192.16.255.255 is not a recognized private IP range. C. 11.0.0.0 to 11.255.255.255 is not a recognized private IP range. D. 192.168.0.0 to 192.168.255.255 falls within the Class C private range.
Therefore, the correct selections that the company should use for their private networks are A and D.

NEW QUESTION # 22
A user initiates a trouble ticket stating that an external web page is not loading. You determine that other resources both internal and external are still reachable.
Which command can you use to help locate where the issue is in the network path to the external web page?

- A. tracert
- B. nslookup
- C. ipconfig/all
- D. ping -t

Answer: A

Explanation:
The tracert command is used to determine the route taken by packets across an IP network. When a user reports that an external

web page is not loading, while other resources are accessible, it suggests there might be an issue at a certain point in the network path to the specific web page. The tracert command helps to diagnose where the breakdown occurs by displaying a list of routers that the packets pass through on their way to the destination. It can identify the network segment where the packets stop progressing, which is valuable for pinpointing where the connectivity issue lies.

Cisco CCST Networking Certification FAQs - CISCONET Training Solutions, Command Prompt (CMD): 10 network-related commands you should know, Network Troubleshooting Commands Guide: Windows, Mac & Linux - Comparitech, How to Use the Traceroute and Ping Commands to Troubleshoot Network, Network Troubleshooting Techniques: Ping, Traceroute, PathPing.

* tracert Command: This command is used to determine the path packets take to reach a destination. It lists all the hops (routers) along the way and can help identify where the delay or

failure occurs.

* ping -t: This command sends continuous ping requests and is useful for determining if a host is reachable but does not provide path information.

* ipconfig /all: This command displays all current TCP/IP network configuration values and can be used to verify network settings but not to trace a network path.

* nslookup: This command queries the DNS to obtain domain name or IP address mapping, useful for DNS issues but not for tracing network paths.

NEW QUESTION # 23

Which component of the AAA service security model provides identity verification?

- A. Accounting
- B. Authorization
- C. Authentication
- D. Auditing

Answer: C

Explanation:

The AAA service security model consists of three components: Authentication, Authorization, and Accounting.

*Authentication: This is the process of verifying the identity of a user or device. It ensures that only legitimate users can access the network or service.

*Authorization: This determines what an authenticated user is allowed to do or access within the network.

*Auditing/Accounting: This component tracks the actions of the user, including what resources they access and what changes they make.

Thus, the correct answer is C. Authentication.
