GAQM Certified Agile Scrum Product Owner (CASPO) Sample Questions (Q63-Q68):

NEW QUESTION # 63
Which of the following are roles on a Scrum Team? (Choose the best three answers)

- A. Scrum Master
- B. Users

- C. Developers
- D. Product Owner
- E. Customers

Answer: A,C,D

Explanation:
TheScrum Guidedefines the Scrum Team as consisting of three roles: "The Scrum Team consists of one Scrum Master, one Product Owner, and Developers." Option A (Developers) is the group responsible for building the Increment. Option D (Product Owner) manages the Product Backlog and value delivery. Option E (Scrum Master) facilitates Scrum adoption and team effectiveness. Options B (Users) and C (Customers) are external stakeholders, not Scrum Team roles-they interact with the product but aren't part of the team.
Thus, A, D, and E are the correct roles.

NEW QUESTION # 64
When many Scrum Teams are working on the same product, should all of their Increments be integrated every Sprint? (Choose the best answer)

- A. No, each Scrum Team stands alone.
- B. No, that is far too hard and must be done in a hardening Sprint.
- C. Yes, otherwise the Product Owners and stakeholders may not be able to accurately inspect what is done.
- D. Yes, but only for Scrum Teams whose work has dependencies.

Answer: C

Explanation:
TheScrum Guidemandates that when multiple Scrum Teams work on one product, they produce a single integrated Increment: "Multiple Scrum Teams often work together on the same product... The Increment must be integrated and usable so that it can provide value." This ensures transparency and stakeholder feedback at the Sprint Review. Option A (hardening Sprint) is a misconception-Scrum rejects separate phases for integration. Option B contradicts the single-product focus. Option C limits integration to dependencies, but the Scrum Guiderequires full integration regardless. Option D correctly emphasizes the need for a cohesive, inspectable Increment, making it the best answer.

NEW QUESTION # 65
Who updates work remaining during the Sprint? (Choose the best answer)

- A. Senior Executives
- B. Product Owner
- C. Developers
- D. Scrum Master

Answer: C

Explanation:
The Developers own the Sprint Backlog and update it as work progresses. TheScrum Guidestates: "The Sprint Backlog is a plan by and for the Developers... As new work is required, the Developers add it to the Sprint Backlog. As work is performed or completed, the estimated remaining work is updated."
* A:The Scrum Master facilitates, not updates.
* B:Correct-the Developers manage it.

NEW QUESTION # 66
Who assigns ownership of the Sprint Backlog items during the Sprint? (Choose the best answer)

- A. There is no single owner of a Product Backlog item, the entire team owns the Sprint Backlog
- B. The Product Owner
- C. Individual Team Members
- D. Whoever has the skills

Answer: A

Explanation:
The Sprint Backlog is collectively owned by the Developers, not assigned to individuals. The Scrum Guide defines it as: "The Sprint Backlog is a plan by and for the Developers... It is a highly visible, real-time picture of the work that the Developers plan to accomplish during the Sprint." Self-organization means the Developers decide who does what, without fixed ownership of items.
* A, B:Individual assignment isn't mandated; it's a team effort.
* C:Correct-the Developers as a whole own it.

NEW QUESTION # 67

What variables should a Product Owner consider when ordering the Product Backlog? (Choose the best answer)

- A. Development cohesion as indicated by the Developers
- B. Lowest development cost in order to maximize ROI
- C. The availability of resources and skills for implementation
- D. Whatever is most appropriate for the Product Owner to achieve the product's goals and to optimize the value received
- E. Effort first, then value
- F. The availability of resources and skills for implementation

Answer: D

Explanation:
The Product Owner's primary duty is to maximize value, with flexibility in how they order the Product Backlog. The Scrum Guide states: "The Product Owner is accountable for effective Product Backlog management, which includes... Ordering Product Backlog items." Option E gives the Product Owner latitude to consider value, effort, risk, dependencies, or other factors relevant to the Product Goal.
* A, C:Prioritizing effort or cost over value is too narrow.
* B:Cohesion is a Developer concern, not the Product Owner's primary focus.
