- B. It automatically reverts commits that introduced the vulnerability.
- C. It prevents users from cloning the repository until issues are resolved.
- D. It flags all forks of the repository as vulnerable.

Answer: A

Explanation:

GitHub security advisories let maintainers privately disclose, discuss fixes, and then publish vulnerabilities in a controlled manner within the repository.

NEW QUESTION # 29

How does GitHub handle secrets found via secret scanning in a public repository?

- A. It deletes the secret from the repository automatically.
- B. It notifies the admin via webhook.
- C. It alerts the service provider (e.g., AWS, Stripe).
- D. It immediately blocks the commit to protect the secret.

Answer: C

Explanation:

When secret scanning detects a supported credential in a public repository, GitHub notifies the issuing service provider so they can revoke or rotate the exposed secret.

- C. It lists commit SHAs to exclude from automatic pull requests.
- D. It encrypts dependency versions before storing them in the repo.

Enterprise policies let you define and enforce mandatory settings across all member organizations - organization-level policies then operate within the options that the enterprise policy exposes.
