

# New Huawei H12-725\_V4.0 Exam Dumps | Reliable H12-725\_V4.0 Exam Simulator

P.S. Free & New H12-725\_V4.0 dumps are available on Google Drive shared by Pass4Test: <https://drive.google.com/open?id=1k3JhszdsoRM6dBywbriOraonWnZoNuKE>

One such trustworthy point about exam preparation material is that it first gains your trust, and then asks you to purchase it. Everyone can get help from Pass4Test's free demo of Huawei H12-725\_V4.0 exam questions. Our HCIP-Security V4.0 exam questions never remain outdated! Take a look at our Free Huawei H12-725\_V4.0 Exam Questions And Answers to check how perfect they are for your exam preparation. Once you buy it, you will be able to get free updates for HCIP-Security V4.0 exam questions for up to 1 year.

Huawei H12-725\_V4.0 (HCIP-Security V4.0) Exam is a comprehensive and challenging certification exam that requires a deep understanding of Huawei Security solutions. H12-725\_V4.0 exam is aimed at security professionals who are looking to advance their careers and demonstrate their expertise in Huawei Security technologies. HCIP-Security V4.0 certification obtained from H12-725\_V4.0 Exam will help individuals stand out in the competitive field of cybersecurity and open up new career opportunities.

## Reliable New H12-725\_V4.0 Exam Dumps & Leader in Certification Exams Materials & Updated Reliable H12-725\_V4.0 Exam Simulator

Using an updated HCIP-Security V4.0 (H12-725\_V4.0) exam dumps is necessary to get success on the first attempt. So, it is very important to choose a Huawei H12-725\_V4.0 exam prep material that helps you to practice actual Huawei H12-725\_V4.0 Questions. Pass4Test provides you with that product which not only helps you to memorize real Huawei H12-725\_V4.0 questions but also allows you to practice your learning.

### Huawei HCIP-Security V4.0 Sample Questions (Q52-Q57):

### NEW QUESTION # 52

In a Huawei network security environment, which of the following is a key advantage of using HWTACACS over RADIUS for device management authentication?

Options:

- A. HWTACACS encrypts only passwords, while RADIUS encrypts the entire payload.
- **B. HWTACACS provides per-command authorization, allowing different privilege levels for different users.**
- C. HWTACACS does not support accounting, while RADIUS does.
- D. HWTACACS operates over UDP, ensuring faster communication than RADIUS.

**Answer: B**

Explanation:

Understanding the Differences Between HWTACACS and RADIUS:

\* HWTACACS (Huawei Terminal Access Controller Access-Control System) is a Huawei-enhanced version of TACACS+ used for AAA (Authentication, Authorization, and Accounting).

\* RADIUS (Remote Authentication Dial-In User Service) is also an AAA protocol but is mainly designed for network access authentication, such as VPNs and wireless authentication.

Why is Option B Correct?

\* HWTACACS supports per-command authorization, meaning administrators can assign different command privileges to different users.

\* For example, a junior network engineer may be allowed to view configurations but not modify them, while a senior engineer has full access.

\* RADIUS does not support granular command authorization, as it primarily controls network access rather than device management.

### NEW QUESTION # 53

IPsec VPN does not support encapsulation of non-IP unicast packets.

- **A. TRUE**
- B. FALSE

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

\* IPsec VPN only supports IP unicast traffic.

\* Non-IP unicast packets (such as multicast and broadcast) are not natively supported.

\* To transmit multicast traffic over IPsec, GRE over IPsec is required.

\* Why is this statement true?

\* Standard IPsec VPN does not support non-IP unicast packets.

HCIP-Security References:

\* Huawei HCIP-Security Guide # IPsec VPN Limitations

### NEW QUESTION # 54

When an IPsec VPN is established in aggressive mode, AH+ESP can be used to encapsulate packets in NAT traversal scenarios.

- **A. FALSE**
- B. TRUE

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

\* Aggressive mode is a faster IKE Phase 1 negotiation method but does not support NAT traversal (NAT-T) with AH.

\* NAT-T only works with ESP, because:

\* AH includes the original IP header in its integrity check, which breaks when NAT modifies the IP address.

\* ESP works with NAT-T since it does not include the original IP header in its integrity check.

\* Why is this statement false?

\* AH does not support NAT-T, so AH+ESP cannot be used in NAT traversal scenarios.

\* Huawei HCIP-Security Guide # IPsec VPN NAT Traversal

#### NEW QUESTION # 55

Which of the following statements is false about HTTP behavior?

- A. When the size of the uploaded or downloaded file or the size of the content obtained through the POST operation reaches the block threshold, the system blocks the uploaded or downloaded file or POST operation.
- B. You can set an alarm threshold and a block threshold to limit the size of the upload file if file upload is allowed.
- C. The POST method of HTTP is commonly used to send information to the server through web pages. For example, use this method when you post threads, submit forms, and use your username and password to log in to a specific system.
- D. When the size of the uploaded or downloaded file or the size of the content obtained through the POST operation reaches the alarm threshold, the system generates a log to notify the device administrator and block the behavior.

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation:

\* Threshold settings in firewalls allow administrators to define:

\* Alarm threshold# When exceeded, logs are generated.

\* Block threshold# When exceeded, the action is blocked.

\* Why is B false?

\* The alarm threshold does not block traffic; it only generates logs.

\* Only the block threshold enforces blocking actions.

#### NEW QUESTION # 56

Which of the following operations can be performed to harden the Windows operating system?(Select All that Apply)

- A. Periodically check account permissions.
- B. Change the default TTL value.
- C. Cancel default sharing.
- D. Restrict the number of users.

**Answer: A,C,D**

Explanation:

Comprehensive and Detailed Explanation:

\* Windows system hardening improves security by reducing attack surfaces.

\* Recommended security measures include:

\* A. Periodically checking account permissions# Prevents unauthorized access.

\* B. Canceling default sharing# Reduces exposure to remote attacks.

\* C. Restricting the number of users# Limits access to essential personnel.

\* Why is D incorrect?

\* Changing the default TTL value does not directly enhance system security.

#### NEW QUESTION # 57

.....

Our H12-725\_V4.0 exam material is full of useful knowledge, which can strengthen your capacity for work. As we all know, it is important to work efficiently. So once you have done your work excellently, you will soon get promotion. You need to be responsible for your career development. The assistance of our H12-725\_V4.0 guide question dumps are beyond your imagination. You will regret if you throw away the good products. One of the significant advantages of our H12-725\_V4.0 Exam Material is that

you can spend less time to pass the exam. People are engaged in modern society. So our goal is to achieve the best learning effect in the shortest time.
