Download VCEEngine Juniper JN0-336 Exam Dumps Today and Start this Journey

If you are an IT staff, do you want a promotion? Do you want to become a professional IT technical experts? Then please enroll in the Juniper JN0-336 exam quickly. You know how important this certification to you. Do not worry about that you can't pass the exam, and do not doubt your ability. Join the Juniper JN0-336 exam, then VCEEngine help you to solve the all the problem to prepare for the exam. It is a professional IT exam training site. With it, your exam problems will be solved. VCEEngine Juniper JN0-336 Exam Training materials can help you to pass the exam easily. It has helped numerous candidates, and to ensure 100% success. Act quickly, to click the website of VCEEngine, come true you IT dream early.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q10-Q15):

NEW QUESTION # 10

Which two statements are true about the vSRX? (Choose two.)

- A. Linux is the base OS.
- B. It does not have VMXNET3 vNIC support.
- C. It has VMXNET3 vNIC support.
- D. UNIX is the base OS.

Answer: A,C

NEW QUESTION # 11

You are asked to create an IPS-exempt rule base to eliminate false positives from happening.

Which two configuration parameters are available to exclude traffic from being examined? (Choose two.)

- A. source IP address
- B. source port
- C. destination port
- D. destination IP address

Answer: A,D

Explanation:

You can specify the source IP address or a range of IP addresses to exclude certain traffic originating from specific network segments or devices. This is useful for whitelisting traffic from known, secure sources that are otherwise triggering false positives in the IPS system.

Similarly, you can specify the destination IP address or a range of addresses to exclude traffic destined for particular network hosts or segments. This helps in reducing false positives for traffic directed towards trusted internal resources or specific external services that are known to be safe.

NEW QUESTION # 12

Which two statements about SRX Series device chassis clusters are true? (Choose two.)

- A. Each chassis cluster member device can host active redundancy groups
- B. Each chassis cluster member requires a unique cluster ID value.
- C. Chassis cluster member devices must be the same model.
- D. Redundancy group 0 is only active on the cluster backup node.

Answer: A,C

Explanation:

In a chassis cluster, both nodes can host active redundancy groups. The active redundancy groups can be distributed between the two nodes, depending on the configuration and failover status, allowing each node to handle traffic for different sets of services or interfaces.

For the chassis clustering to function correctly, both nodes in the cluster must be of the same model.

This requirement ensures that the hardware capabilities, such as processing power and interface compatibility, are identical, which is crucial for maintaining consistent performance and behavior between cluster nodes.

NEW QUESTION # 13

You are asked to reduce the load that the JIMS server places on your network. Which action should you take in this situation?

- A. Connect JIMS to the domain SQL server.
- B. Connect JIMS to the domain Exchange server
- C. Connect JIMS to the RADIUS server
- D. Connect JIMS to another SRX Series device.

Answer: D

Explanation:

JIMS server is a Juniper Identity Management Service that collects user identity information from different authentication sources for SRX Series devices¹². It can connect to SRX Series devices and CSO platform in your network¹.

NEW QUESTION # 14

Which two statements are correct about App Track? (Choose two.)

- A. App Track collects traffic flow information including byte, packet, and duration statistics.
- B. App Track can be configured for any defined logical system on an SRX Series device.
- C. App Track identifies and blocks traffic flows that might be malicious regardless of the ports being used.
- D. App Track can only be configured in the main logical system on an SRX Series device.

Answer: A,B

Explanation:

AppTrack is a feature that allows you to monitor and analyze the application traffic on your SRX Series device. It can be configured for any defined logical system, which is a virtual router or switch within a physical device. AppTrack collects statistics such as bytes, packets, and duration for each application flow and displays them in reports or logs. AppTrack does not identify or block malicious traffic, that is the function of AppSecure or IDP/IPS.
