Free PDF Quiz 2025 ITFAS-Level-1: Inspection and Testing of Fire Alarm Systems Level I Exam Accurate Reliable Test Voucher

With the rapid development of society, people pay more and more attention to knowledge and skills. So every year a large number of people take ITFAS-Level-1 tests to prove their abilities. But even the best people fail sometimes. In addition to the lack of effort, you may also not make the right choice on our ITFAS-Level-1 Exam Questions. A good choice can make one work twice the result with half the effort, and our ITFAS-Level-1 study materials will be your right choice.

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q50-Q55):

NEW QUESTION # 50

Where smoke detectors are installed for protection during construction, they shall be cleaned and verified to be within the marked sensitivity range before which event?

- A. Pre-test of system
- **B. Final commissioning**
- C. Walk-through by engineer
- D. Final cleaning

Answer: B

Explanation:

If smoke detectors are installed during construction, they are likely exposed to dust or debris. NFPA 72 requires that these be cleaned and tested for sensitivity before final commissioning of the system.

NFPA 72 (2022), Section 17.7.1.11:

"Where detectors are used for protection during construction, they shall be cleaned or replaced prior to final system commissioning." This ensures proper performance and prevents false alarms.

Correct answer: B. Final commissioning

NEW QUESTION # 51

The inspection phase, as opposed to the testing phase, of system control equipment should concentrate on which of the following tasks?

- A. Operational reliability only
- B. Proof of signals at monitoring facility
- **C. Visual inspection only**
- D. Activation of all initiating devices

Answer: C

Explanation:

NFPA 72 defines inspection as a visual examination of a system or component to verify that it appears to be in operating condition and is free of physical damage.

NFPA 72 (2022), Section 3.3.138 - Inspection:

"A visual examination of a system or portion thereof to verify that it appears to be in operating condition and is free of physical damage." Testing, on the other hand, involves functional activation.

Correct answer: D. Visual inspection only

NEW QUESTION # 52

An off-normal signal shall be initiated during which of the following travel distances of the valve control apparatus from its normal position?

- **A. 1/4**
- B. 1/5
- C. 1/2
- D. 1/3

Answer: A

Explanation:

This question is referring to supervisory signaling for control valves in sprinkler systems. When a valve begins to move from its normal (open) position, the fire alarm system must detect and signal this before it reaches too far out of position.

NFPA 72 (2022), Section 17.16.1.3:

"Off-normal signal shall be initiated during the first one-quarter (1/4) of the valve travel distance from its normal position." This ensures timely detection if someone begins to close a sprinkler valve, which could disable the fire suppression system.

Correct answer: B. 1/4

NEW QUESTION # 53

A single open fault, in a Class A pathway, shall result in the annunciation of which of the following signals?

- A. Pre-alarm
- **B. Trouble**
- C. Alarm
- D. Supervisory

Answer: B

Explanation:

In a Class A fire alarm circuit, a single open condition does not affect communication but must still be annunciated as a trouble signal. NFPA 72 (2022), Section 12.3.1.1.1.4:

"A single open condition on a Class A pathway shall result in a trouble signal." This maintains system operation while alerting of a wiring fault.

Correct answer: D. Trouble

NEW QUESTION # 54

According to NFPA 72, manual fire alarm boxes shall be located within which distance of each exit doorway on each floor?

- A. 33 feet (10.0 meters)
- B. 6 feet (2.0 meters)
- C. 16 feet (5.0 meters)
- **D. 5 feet (1.5 meters)**

Answer: D

Explanation:

Manual fire alarm boxes (pull stations) are required to be easily accessible near exits so that occupants can quickly initiate an alarm when leaving the area. The specific distance requirement is found in:

NFPA 72 (2022), Section 17.14.6.3:

"Manual fire alarm boxes shall be located within 5 ft (1.5 m) of each exit doorway on each floor." So the correct distance is 5 feet, not 33 feet. That makes the correct answer:

Correct answer: A. 5 feet (1.5 meters)

NEW QUESTION # 55

.....

Everyone wants to have a good job and decent income. But if they don't have excellent abilities and good major knowledge they are hard to find a decent job. Passing the test ITFAS-Level-1 certification can make you realize your dream and find a satisfied job. Our ITFAS-Level-1 study materials are a good tool that can help you pass the ITFAS-Level-1 Exam easily. You needn't spend too much time to learn it. Our ITFAS-Level-1 exam guide is of high quality and if you use our product the possibility for you to pass the ITFAS-Level-1 exam is very high as 99% to 100%.
