Latest Updated New LEED-Green-Associate Exam Answers - USGBC LEED-Green-Associate Free Vce Dumps: LEED Green Associate Exam

You can choose the most suitable and convenient one for you. The web-based LEED-Green-Associate practice exam is compatible with all operating systems. It is a browser-based USGBC LEED-Green-Associate Practice Exam that works on all major browsers. This means that you won't have to worry about installing any complicated software or plug-ins.

USGBC LEED Green Associate Exam Sample Questions (Q301-Q306):

NEW QUESTION # 301

Installing which of the following will increase the quantity of the rainwater that is discharged from a site?

- A. Concrete sidewalks and parking areas
- B. Porous pavers for parking lots
- C. Vegetated roof
- D. Bioswales and rain gardens with native plants

Answer: A

Explanation:

Installing concrete sidewalks and parking areas will increase the quantity of the rainwater that is discharged from a site. Rainwater is the water that falls as precipitation on a site. Rainwater discharge is the amount of rainwater that leaves a site as surface runoff or subsurface flow. Rainwater discharge can affect the quantity and quality of water resources downstream by causing erosion, flooding, sedimentation, pollution, and habitat loss. Concrete sidewalks and parking areas are examples of impervious surfaces that

prevent rainwater from infiltrating into the soil and increase rainwater discharge by creating more runoff¹. References: LEED v4 Green Associate Candidate Handbook¹, EPA's Stormwater Management

NEW QUESTION # 302

Which of the following has the highest energy consumption in a typical U.S. office building?

- A. Cooling
- B. Water Heating
- C. Lighting
- D. Space Heating

Answer: D

Explanation:

Explanation

According to the U.S. Energy Information Administration, space heating accounted for about 32% of energy use for all U.S. commercial buildings in 2018, followed by ventilation and lighting, each at about 10%¹. Space heating is the largest single energy end use in U.S. office buildings as well².

Use of energy in commercial buildings - U.S. Energy Information Administration (EIA)¹ Data Trends: Energy Use in Office Buildings | ENERGY STAR²

NEW QUESTION # 303

The general contractor for a project located in a dense urban area attempts to gain a credit in Materials and Resources. Which of the following is considered a local material?

- A. Quarry tile that is extracted 370 mi (595 km) away and manufactured in a city 1,600 mi (2,575 km) away
- B. Stone that is harvested and processed 80 mi (128.7 km) from the project site and purchased 75 mi (121 km) away
- C. Bamboo flooring that is harvested 2,350 mi (3,782 km) away and manufactured 200 mi (322 km) away from the project site
- D. Vinyl flooring manufactured 500 mi (805 km) away but is sold at a warehouse 2 mi (3.2 km) from the project site

Answer: B

Explanation:

Stone that is harvested and processed 80 mi (128.7 km) from the project site and purchased 75 mi (121 km) away is considered a local material because it meets the criteria of being extracted, harvested, recovered, or manufactured within 100 mi (160 km) of the project site. Local materials can help reduce environmental impacts associated with transportation, such as greenhouse gas emissions, air pollution, and energy consumption. Local materials can also support the local economy and community. LEED projects can earn credits for using local materials under the Materials and Resources category. NEW QUESTION # 304

In order to maintain the LEED Green Associate credential, you must earn which of the following continuing education credits?

- A. 15 hours every two years with three hours being LEED specific
- B. 15 hours per year with six hours being LEED specific
- C. 30 hours every two years with six hours being LEED specific
- D. 30 hours per year with three hours being LEED specific

Answer: C

Explanation:

To maintain the LEED Green Associate credential, you must earn 30 continuing education hours every two years, with at least six of those hours being LEED specific. This requirement ensures that LEED Green Associates stay up-to-date with the latest developments in green building practices and LEED rating systems. References: LEED Green Associate Candidate Handbook, U.S. Green Building Council resources

NEW QUESTION # 305

Which Of the following is an example Of Integrative process?

- A. Ongoing evaluation of feedback mechanisms during building operation
- B. Rapid incorporation of design changes during construction
- C. Conscientious maintenance of building equipment during building operation
- D. Judicious use of recyclable materials during construction

Answer: A

Explanation:

Integrative process is a collaborative approach that involves all project stakeholders in the design and decision-making process from the beginning to the end of a project. It aims to optimize the performance, environmental, social, and economic outcomes of a project by considering the interrelationships and synergies between various building and site systems. One of the key aspects of integrative process is to establish feedback loops that allow for continuous monitoring, evaluation, and improvement of the project performance during its operation. Therefore, option C is an example of integrative process, while the other options are not directly related to it.
