

New Launch SK0-005 CompTIA Server+ Certification Exam Dumps Options To Pass the Exam 2025

CompTIA		Certification Details
CompTIA Server+ Certification		
 Prior Certification CompTIA A+ Certification	 Exam Validity 3 Years	 Exam Fee \$ 338.00
 Exam Duration 90 Minutes	 No. of Questions 90 Questions	 Passing Marks 750 (on a scale of 100-900)
 Recommended Experience 2 years of hands-on experience working in a server environment		 Exam Format Multiple choice and performance-based
 Languages English		

2025 Latest ITexamReview SK0-005 PDF Dumps and SK0-005 Exam Engine Free Share: <https://drive.google.com/open?id=1STQRluPFhvajo6Mb6FRpv3RYd8wfMTTrA>

Preparing for the exam may be not an easy thing for some candidates, if you choose us, we will do the things for you, what you need to do is practicing. We offer you free demo for SK0-005 training materials, you can have a try before buying. And you will receive the downloading link and password within ten minutes after purchasing the SK0-005 Exam Dumps. In addition, we have after-service stuff to resolve the confusions you have. If you fail to pass the exam, we are money back guaranteed, or if you have other exam to attend, we can also replace other 2 valid exam dumps for you.

To prepare for the CompTIA SK0-005 Certification Exam, professionals should have a strong understanding of server hardware, server software, server networking, and server storage. They should also have experience working with servers and have a thorough understanding of server administration best practices. Additionally, candidates should be familiar with industry standards and protocols related to server administration, such as TCP/IP, DNS, and DHCP.

Exam Questions SK0-005 Vce, SK0-005 Valid Study Guide

PDF version of SK0-005 exam questions - being legible to read and remember, support customers' printing request, and allow you to have a print and practice in papers. Software version of SK0-005 guide dump - supporting simulation test system, with times of setup has no restriction. Remember this version support Windows system users only. App online version of SK0-005 Guide dump - Being suitable to all kinds of equipment or digital devices, supportive to offline exercises on the condition that you practice it without mobile data. Boggled down in review process right now, our SK0-005 training materials with three versions can help you gain massive knowledge.

CompTIA Server+ Certification Exam Sample Questions (Q386-Q391):

NEW QUESTION # 386

A server administrator is configuring the IP address on a newly provisioned server in the testing environment. The network VLANs are configured as follows:

VLAN name	VLAN ID	Gateway IP address	Active switchports
Testing	10	192.168.10.1/24	2, 4, 6, 8, 10, 12, 14, 18
Production	20	192.168.20.1/24	3, 5, 7, 9, 11, 13, 15, 17
Administration	30	192.168.30.1/24	1, 24

The administrator configures the IP address for the new server as follows:

IP address: 192.168.1.1/24

Default gateway: 192.168.10.1

A ping sent to the default gateway is not successful. Which of the following IP address/default gateway combinations should the

administrator have used for the new server?

- A. IP address: 192.168.10.2/24
Default gateway: 192.168.10.1
- B. IP address: 192.168.10.24/24
Default gateway: 192.168.30.1
- C. IP address: 192.168.1.2/24
Default gateway: 192.168.10.1
- D. IP address: 192.168.10.3/24
Default gateway: 192.168.20.1

Answer: A

Explanation:

The IP address/default gateway combination that the administrator should have used for the new server is IP address: 192.168.10.2/24 and Default gateway: 192.168.10.1.

The IP address and the default gateway of a device must be in the same subnet to communicate with each other.

A subnet is a logical division of a network that allows devices to share a common prefix of their IP addresses.

The subnet mask determines how many bits of the IP address are used for the network prefix and how many bits are used for the host identifier.

A /24 subnet mask means that the first 24 bits of the IP address are used for the network prefix and the last 8 bits are used for the host identifier.

Therefore, any IP address that has the same first 24 bits as the default gateway belongs to the same subnet.

In this case, the default gateway has an IP address of 192.168.10.1/24, which means that any IP address that starts with 192.168.10.x/24 belongs to the same subnet.

The new server has an IP address of 192.168.1.1/24, which does not match the first 24 bits of the default gateway, so it belongs to a different subnet and cannot communicate with the default gateway.

To fix this issue, the administrator should change the IP address of the new server to an unused IP address that starts with 192.168.10.x/24, such as 192.168.10.2/24.

NEW QUESTION # 387

A server administrator has noticed that the storage utilization on a file server is growing faster than planned.

The administrator wants to ensure that, in the future, there is a more direct relationship between the number of users using the server and the amount of space that might be used. Which of the following would BEST enable this correlation?

- A. Partitioning
- B. Deduplication
- C. Compression
- D. Disk quotas

Answer: D

Explanation:

The best way to ensure that there is a more direct relationship between the number of users using the server and the amount of space that might be used is to implement disk quotas. Disk quotas are a feature that allows a server administrator to limit the amount of disk space that each user or group can use on a file server. Disk quotas can help manage storage utilization, prevent disk space exhaustion, and enforce fair usage policies.

Disk quotas can also provide reports and alerts on disk space usage and quota status.

NEW QUESTION # 388

A server administrator has been asked to implement a password policy that will help mitigate the chance of a successful brute-force attack. Which of the following password policies should the administrator implement first?

- A. Minimum age
- B. Length
- C. Complexity
- D. Lockout

Answer: B

Explanation:

Explanation

Password length is the first password policy that the administrator should implement to help mitigate the chance of a successful brute-force attack. A brute-force attack is a method of guessing passwords by trying all possible combinations of characters until the correct one is found. The longer the password, the more combinations there are, and the more time and resources it takes to crack it. Therefore, password length is a key factor in password strength and security.

NEW QUESTION # 389

The Chief Information Officer of a data center is concerned that transmissions from the building can be detected from the outside. Which of the following would resolve this concern? (Select TWO).

- A. Reflective glass
- **B. Camouflage**
- C. RFID
- D. Bollards
- E. Proximity readers
- **F. Signal blocking**

Answer: B,F

Explanation:

Explanation

Signal blocking is a technique that prevents or reduces the transmission of electromagnetic signals from a building to the outside.

Signal blocking can be achieved by using materials that absorb, reflect, or scatter the signals, such as metal, concrete, or mesh.

Signal blocking can protect the data center from eavesdropping, interference, or jamming by unauthorized parties.

Camouflage is a technique that disguises or conceals the appearance of a building to make it less noticeable or identifiable from the outside. Camouflage can be achieved by using colors, patterns, shapes, or vegetation that blend in with the surrounding environment.

Camouflage can protect the data center from detection, reconnaissance, or targeting by hostile parties

NEW QUESTION # 390

A server administrator is configuring the IP address on a newly provisioned server in the testing environment.

The network VLANs are configured as follows:

VLAN name	VLAN ID	Gateway IP address	Active switchports
Testing	10	192.168.10.1/24	2, 4, 6, 8, 10, 12, 14, 18
Production	20	192.168.20.1/24	3, 5, 7, 9, 11, 13, 15, 17
Administration	30	192.168.30.1/24	1, 24

The administrator configures the IP address for the new server as follows:

IP address: 192.168.1.1/24

Default gateway: 192.168.10.1

A ping sent to the default gateway is not successful. Which of the following IP address/default gateway combinations should the administrator have used for the new server?

- **A. IP address: 192.168.10.2/24
Default gateway: 192.168.10.1**
- B. IP address: 192.168.10.24/24
Default gateway: 192.168.30.1
- C. IP address: 192.168.1.2/24
Default gateway: 192.168.10.1
- D. IP address: 192.168.10.3/24
Default gateway: 192.168.20.1

Answer: A

Explanation:

Explanation

The IP address/default gateway combination that the administrator should have used for the new server is IP address:

192.168.10.2/24 and Default gateway: 192.168.10.1. The IP address and the default gateway of a device must be in the same subnet to communicate with each other. A subnet is a logical division of a network that allows devices to share a common prefix of their IP addresses. The subnet mask determines how many bits of the IP address are used for the network prefix and how many bits are used for the host identifier. A /24 subnet mask means that the first 24 bits of the IP address are used for the network prefix and the last 8 bits are used for the host identifier. Therefore, any IP address that has the same first 24 bits as the default gateway belongs to the same subnet. In this case, the default gateway has an IP address of 192.168.10.1/24, which means that any IP address that starts with 192.168.10.x/24 belongs to the same subnet. The new server has an IP address of 192.168.1.1/24, which does not match the first 24 bits of the default gateway, so it belongs to a different subnet and cannot communicate with the default gateway. To fix this issue, the administrator should change the IP address of the new server to an unused IP address that starts with 192.168.10.x/24, such as 192.168.10.2/24.

NEW QUESTION # 391

.....

Profit from the opportunity to get these top-notch exam questions for the CompTIA SK0-005 certification test. We guarantee you that our top-rated CompTIA SK0-005 practice exam (PDF, desktop practice test software, and web-based practice exam) will enable you to pass the CompTIA SK0-005 Certification Exam on the very first go.
