NEW QUESTION # 197

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You build a language model by using a Language Understanding service. The language model is used to search for information on a contact list by using an intent named FindContact.

A conversational expert provides you with the following list of phrases to use for training.

Find contacts in London. Who do I know in Seattle?

Search for contacts in Ukraine.

You need to implement the phrase list in Language Understanding.

Solution: You create a new pattern in the FindContact intent.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:

Explanation

Instead use a new intent for location.

Note: An intent represents a task or action the user wants to perform. It is a purpose or goal expressed in a user's utterance.

Define a set of intents that corresponds to actions users want to take in your application. Reference:

NEW QUESTION # 198

You have an Azure Cognitive Search solution and a collection of blog posts that include a category field. You need to index the posts. The solution must meet the following requirements:

- * Include the category field in the search results.
- * Ensure that users can search for words in the category field.
- * Ensure that users can perform drill down filtering based on category.

Which index attributes should you configure for the category field?

- A. searchable, sortable, and retrievable
- B. retrievable, filterable, and sortable
- C. searchable, facetable, and retrievable
- D. retrievable, facetable, and key

Answer: C

Explanation:

For the category field in Azure Cognitive Search:

- * searchable # allows users to search by words in the category field.
- * facetable # enables drill-down filtering (facets).
- * retrievable # ensures the field appears in search results.
- * filterable/sortable/key are not required here based on the scenario.

The answer: A
