Safe Attachments policy: This policy allows you to specify how to handle email attachments that might contain malware. You can create a custom policy for Mailbox1 and set the action to Do not scan attachments. This will ensure that incoming email is not filtered for Mailbox1. You can also enable the Redirect attachment option to send a copy of the original attachment to another mailbox for analysis¹.

Anti-phishing policy: This policy helps you protect your organization from impersonation and spoofing attacks. You can create a default policy for all other mailboxes in the subscription and enable the following features: Impersonation protection, Spoof intelligence, and Domain authentication. These features will help you detect and block emails that try to impersonate your users, domains, or trusted senders².

Box 1: Connect-MgGraph

Assign Microsoft 365 licenses to user accounts with PowerShell

Use the Microsoft Graph PowerShell SDK

First, connect to your Microsoft 365 tenant.

Assigning and removing licenses for a user requires the User.ReadWrite.All permission scope or one of the other permissions listed in the 'Assign license' Microsoft Graph API reference page.

The Organization.Read.All permission scope is required to read the licenses available in the tenant.

Connect-MgGraph -Scopes User.ReadWrite.All, Organization.Read.All

Box 2: Get-MgSubscribedSku

Run the Get-MgSubscribedSku command to view the available licensing plans and the number of available licenses in each plan in your organization. The number of available licenses in each plan is ActiveUnits - WarningUnits - ConsumedUnits.

Box 3: Set-MgUserLicense

Assigning licenses to user accounts

To assign a license to a user, use the following command in PowerShell.

Set-MgUserLicense -UserId \$userUPN -AddLicenses @{\$SkuId = "<SkuId>"} -RemoveLicenses @() This example assigns a license from the SPE_E5 (Microsoft 365 E5) licensing plan to the unlicensed user belindan@litwareinc.com:

\$e5Sku = Get-MgSubscribedSku -All | Where SkuPartNumber -eq 'SPE_E5'

Set-MgUserLicense -UserId "belindan@litwareinc.com" -AddLicenses @{\$SkuId = \$e5Sku.SkuId}

Number of days:

Box 1: Notification to Microsoft Authenticator app

Do users have 14 days to register for Azure AD Multi-Factor Authentication?

Users have 14 days to register for MFA with the Microsoft Authenticator app from their smart phones, which begins from the first time they sign in after security defaults has been enabled. After 14 days have passed, the user won't be able to sign in until MFA registration is completed.

Box 2: 14

Azure AD Identity Protection will prompt your users to register the next time they sign in interactively and they'll have 14 days to complete registration. During this 14-day period, they can bypass registration if MFA isn't required as a condition, but at the end of the period they'll be required to register before they can complete the sign-in process.
