You have an Azure subscription that is linked to a hybrid Microsoft Entra tenant and contains a user named User1. User1 works remotely.
You need to ensure that User1 can establish RDP connections to Server1 via the internet. The solution must ensure that User1 authenticates by using multifactor authentication (MFA).
What should you include in the solution?

- A. Windows Admin Center
- B. Azure Bastion
- C. Microsoft Entra Internet Access
- D. Microsoft Entra Private Access

Answer: B

Explanation:
Azure Bastion can be used to establish RDP connections for a user in an Azure tenant to an on-premises server in an Active Directory Domain Services (AD DS) domain, and it can be configured to require multifactor authentication (MFA) for those connections. Azure Bastion provides secure and seamless RDP connectivity to VMs, including those within an AD DS domain, directly from the Azure portal over SSL, without exposing them to public IP addresses.
