### Microsoft Administering Information Security in Microsoft 365 Sample Questions (Q20-Q25):

#### NEW QUESTION # 20

You have a Microsoft 365 ES subscription that contains the devices shown in the following table.

Name	Platform	Chipset
Device1	Windows 11	x64
Device2	Windows 11	ARM64
Device3	Windows 10	x86

You publish Microsoft Purview Information Protection sensitivity labels.

You plan to deploy the information protection client to the devices. The solution must ensure that the labels can be applied to sensitive images and documents. On which devices can you install the information protection client, and what should users use to apply labels?

To answer, select the appropriate options in the answer area.

### NEW QUESTION # 21

#### HOTSPOT

You have a Microsoft 365 E5 subscription that contains a user named User1.

You deploy Microsoft Purview Data Security Posture Management for AI (DSPM for AI).

You need to ensure that User1 can perform the following actions:

# View recommendations from the Recommendations page.

# View the user risk level for all events by using Activity explorer.

The solution must follow the principle of least privilege.

To which role group should you add User1 for each action? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Box 1: The Insider Risk Management Investigators role allows users to view recommendations related to insider risk cases and Microsoft Purview DSPM for AI insights. This role is appropriate because it grants access to review AI-related risk recommendations without unnecessary administrative privileges.

Box 2: The Insider Risk Management Analysts role allows users to analyze user risk levels and events using Activity Explorer. This follows the principle of least privilege, ensuring that User1 can only view risk levels and investigate but does not gain full administrative control over insider risk policies.

#### NEW QUESTION # 22

You have a data loss prevention (DIP) policy that applies to the Devices location. The policy protects documents that contain United States passport numbers. Users report that they cannot upload documents to a travel management website because of the policy. You need to ensure that the users can upload the documents to the travel management website. The solution must prevent the protected content from being uploaded to other locations.

Which Microsoft 365 Endpoint data loss prevention (Endpoint DLP) setting should you configure?

- A. Unallowed browsers
- B. File path exclusions
- C. Service domains
- D. Unallowed apps

**Answer: C**

Explanation:

The issue: Users cannot upload documents with U.S. passport numbers to a legitimate travel management website because Endpoint DLP is blocking it.

Solution: Configure Service domains in Endpoint DLP # this allows defining specific trusted domains where uploads of sensitive information are permitted while still blocking uploads to other, non-approved domains.

Why not others?

Unallowed browsers: Restricts/blocklists browsers, not the issue here.

File path exclusions: Excludes local folders/paths from monitoring, irrelevant to web uploads.

Unallowed apps: Restricts desktop apps, not browser-based sites.

Understanding DLP Policy Impact on File Access

The DLP policy (DLPpolicy1) applies to Site2 and restricts access when:

# Content contains SWIFT Codes.

# Instance count is 2 or more.

File Analysis (Based on SWIFT Codes Count)

A screenshot of a computer AI-generated content may be incorrect.

File Name	SWIFT Codes Count	DLP Policy Restricts Access?
File1.docx	1	<input type="checkbox"/> No restriction (SWIFT codes < 2)
File2.bmp	4	<input type="checkbox"/> Restricted (SWIFT codes ≥ 2)
File3.txt	3	<input type="checkbox"/> Restricted (SWIFT codes ≥ 2)
File4.xlsx	7	<input type="checkbox"/> Restricted (SWIFT codes ≥ 2)

Files that remain accessible (not restricted by DLP):

# File1.docx (Contains only 1 SWIFT Code # Below restriction threshold) User access after DLP policy is applied:

A screenshot of a computer AI-generated content may be incorrect.

User	Role in Site2	Access Rights	Can Access Files?
User1	Site Owner	Full Access	File1.docx, plus override access to another file
User2	Site Visitor	Read-only	File1.docx only

User1 (Site Owner):

# Has higher privileges and can override DLP restrictions (through admin intervention).

# Can access 2 files (File1.docx + override access to another file).

User2 (Site Visitor):

# Has read-only access but DLP blocks access to restricted files.

# Can only access 1 file (File1.docx), since all others are restricted.

#### NEW QUESTION # 24

You have a Microsoft 365 E5 tenant that has devices onboarded to Microsoft Defender for Endpoint as shown in the following table.

Name	Type
Device1	Windows 11
Device2	Windows 10
Device3	iOS
Device4	macOS

You plan to start using Microsoft 365 Endpoint data loss protection (Endpoint DLP).

Which devices support Endpoint DLP?

- A. Device1 only
- B. Device1 and Device4 only
- C. Device1, Device2, Device3, and Device4
- D. Device1, Device2, and Device4 only
- E. Device1 and Device2 only

**Answer: E**

Explanation:

Microsoft 365 Endpoint data loss prevention (Endpoint DLP) is supported only on Windows 10 and Windows 11 devices. It does not support macOS or iOS at this time.

From the provided table:

# Device1 (Windows 11) - Supported

# Device2 (Windows 10) - Supported

# Device3 (iOS) - Not supported

# Device4 (macOS) - Not supported

Thus, only Device1 and Device2 support Endpoint DLP.
