New NCS-Core Cram Materials & NCS-Core Reliable Study Notes

What's more, part of that Exams-boost NCS-Core dumps now are free: https://drive.google.com/open?id=1IPvN6E9ukyDjTfj4xD94214uZORuPqFl

When you take Exams-boost Nutanix NCS-Core practice exams, you can know whether you are ready for the finals or not. It shows you the real picture of your hard work and how easy it will be to clear the NCS-Core exam if you are ready for it. So, don't miss practicing the NCS-Core Mock Exams and score yourself honestly. You have all the time to try Nutanix NCS-Core practice exams and then be confident while appearing for the final turn.

Nutanix NCS-Core Exam is an essential certification for IT professionals who want to advance their careers in the field of Core Infrastructure. Nutanix Certified Services Core Infrastructure Professional certification validates the skills and knowledge of IT professionals in deploying and managing Nutanix Core Infrastructure solutions. It also demonstrates the ability to troubleshoot and optimize Nutanix Core Infrastructure environments.

Nutanix NCS-Core Certification Exam is designed to assess an individual's ability to perform tasks related to Nutanix Core Infrastructure, including designing and implementing clusters, configuring networking, monitoring and maintaining Nutanix clusters, and troubleshooting common issues. NCS-Core exam is intended for Nutanix customers, partners, and employees who work with Nutanix solutions.

NCS-Core Reliable Study Notes, NCS-Core Latest Exam Labs

All our three versions are paramount versions. PDF version of NCS-Core practice questions - it is legible to read and remember, and support customers' printing request, so you can have a print and practice in papers. Software version of NCS-Core guide materials - It support simulation test system, and times of setup has no restriction. Remember this version support Windows system users only. App online version of NCS-Core study quiz - Be suitable to all kinds of equipment or digital devices.

Nutanix Certified Services Core Infrastructure Professional Sample Questions (Q182-Q187):

NEW QUESTION # 182
A consultant is reviewing a customers Pre-delivery Questionnaire.
The customer wants to deploy their cluster with ESXi as the hypervisor with vSphere Distributed Switch. The customer will be using Cisco Nexus 9k as their switch choice In the kick-off call, it is confirmed that the customer has a business requirement to use LACP in their environment.
What should the consultant ensure that the customer configures on the port-channel interface before deployment?

- A. no lacp graceful-convergence
- B. service unsupported-transceiver
- C. show pore-channel
- D. no lacp suspend-individual

Answer: D

Explanation:
Given that the customer is using a Cisco Nexus 9k switch and wants to deploy ESXi with a vSphere Distributed Switch while using LACP, the consultant should ensure that the customer configures:

* D. no lacp suspend-individual: This command ensures that LACP doesn't suspend the individual port if it does not receive LACP PDUs from the other side, which is crucial in environments where continuous connectivity is required for all member links of the port-channel to maintain uninterrupted network services.
References:
* Nutanix Bible (https://www.nutanixbible.com), where it discusses ESXi configurations and switch settings.
* Cisco Nexus configuration guides, referred through Nutanix's training materials, which recommend
* settings for optimal integration with Nutanix environments.

NEW QUESTION # 183

A consultant is onsite with a customer to expand an existing eight-node cluster with four new GPU nodes. The consultant plugs the nodes into the network switch and follows the procedure to expand the cluster in Prism Element, but the new nodes cannot be found.
Which issue is preventing the new nodes from being discovered?

* A. IPv6 is disabled on the ToR switch.
* B. Node discovery is disabled in the BIOS.
* C. IPMI is not plugged into the network.
* D. Active Directory is not configured appropriately.

Answer: C

Explanation:
If new GPU nodes cannot be found during an attempt to expand an existing cluster:
* A. IPMI is not plugged into the network: IPMI must be connected and functional for node discovery and management during expansion processes. If IPMI ports are not connected to the network, the nodes will not be discoverable in Prism Element.
References:
* Nutanix Bible (https://www.nutanixbible.com), particularly the sections discussing network requirements for cluster expansion.
* Nutanix University: NCS-Core 6.8 Training (https://university.nutanix.com), focusing on
* troubleshooting and resolving issues during hardware expansions.

NEW QUESTION # 184

During a technical call with a customer, it is identified that this installation will be software only on Dell servers. The out-of-band management interfaces will not be given IP addresses until the consultant is onsite.
Which Foundation method should be used for this type of installation?

* A. Bare metal using iDRAC MAC addresses.
* B. Bare metal using node serial numbers.
* C. Bare metal using block serial numbers.
* D. Bare metal using LAN MAC addresses.

Answer: A

NEW QUESTION # 185

An administrator responsible for a VDI environment needs to investigate reports of slow logins. The administrator finds that increasing the number of vCPUs from 2 to 4 will reduce the login times. Production workloads are consuming 75% of the host CPU on the cluster. The administrator increases the vCPU count on all of the VDI VMs.
What are two impacts on the cluster? (Choose two.)

* A. Increase memory utilization%
* B. Increasing CPU counts will decrease memory utilization
* C. Increase CPU utilization%
* D. Increase CPU ready%

Answer: C,D

Explanation:
Increasing the number of vCPUs from 2 to 4 can indeed reduce login times by providing more processing power to handle the login requests. However, this action will have two main impacts on the cluster:

A: Increase CPU utilization%: By increasing the number of vCPUs, you are effectively increasing the demand for CPU resources. This will result in a higher percentage of the CPU being utilized.

B: Increase CPU ready%: CPU Ready is a measure of the amount of time a virtual machine is ready to run against the pCPU, but is waiting to be scheduled on the physical CPU. By increasing the number of vCPUs, you are increasing the number of virtual machines that are ready to run, which can increase the CPU Ready percentage.

Increasing the vCPU count does not directly affect memory utilization, so options C and D are not correct.

References:

* The conclusions above are based on general virtualization principles covered in resources like the Nutanix Bible (https://www.nutanixbible.com/) and the Nutanix University training materials for NCS-Core certification (https://university.nutanix.com/). These sources explain the impact of CPU allocation and utilization in detail, particularly in the context of cluster performance and virtual desktop infrastructure.

* Additionally, practical insights into these dynamics are discussed in various video tutorials from the Nutanix official YouTube playlist for NCS-Core learning (https://www.youtube.com/playlist?list=PLAHgaS9IrJecs_AcQT3Y7vSsKT2mjz3Iu), which provide visual and step-by-step breakdowns of how CPU resources are managed in a Nutanix environment.

NEW QUESTION # 186

While trying to upgrade AOS in a cluster, a consultant receives a warning message that there are two powered-on VMs that need to be powered off for the upgrade to proceed.

What would cause this warning to be issued?

- A. Upgrading a single-node cluster requires the VMs to be shut down.
- B. There are not enough resources left in the single-node cluster.
- C. There are not enough resources left in the two-node cluster.
- D. Upgrading a two-node cluster requires the VMs to be shut down.

Answer: A
