## New New NSE5\_FSM-6.3 Test Blueprint | Valid Detailed NSE5\_FSM-6.3 Study Plan: Fortinet NSE 5 - FortiSIEM 6.3

Fortinet NSE5\_FSM-6.3 learning materials help you to easily acquire the Fortinet NSE 5 - FortiSIEM 6.3 NSE5\_FSM-6.3 certification even if you have never touched the relative knowledge before. With our NSE5\_FSM-6.3 Exam Questions, you will easily get the favor of executives and successfully enter the gates of famous companies.

To prepare for the Fortinet NSE5\_FSM-6.3 Certification Exam, candidates can take advantage of various study resources, including online training, study guides, and practice exams. Fortinet also offers a certification program that provides hands-on experience with FortiSIEM 6.3, which can be beneficial for candidates who want to gain practical experience before taking the exam.

## Fortinet NSE 5 - FortiSIEM 6.3 Sample Questions (Q11-Q16):

### NEW QUESTION # 11

An administrator is configuring FortiSIEM to discover network devices and receive syslog from network devices. Which statement is correct?

- A. Syslog configuration must be done manually on devices by the network administrator.
- B. FortiSIEM automatically configures network devices to send syslog using the GUI discovery process

- C. FortiSIEM uses privileged credentials to log in to devices and make network configuration changes.
- D. FortiSIEM automatically configures network devices to send syslog using the auto log discovery process.

**Answer: A**

Explanation:

Syslog Configuration in FortiSIEM: For FortiSIEM to receive syslog messages from network devices, those devices need to be properly configured to send syslog data to FortiSIEM.

Manual Configuration Requirement: FortiSIEM does not automatically configure network devices to send syslog messages. Instead, this configuration must be performed manually by the network administrator.

Process Overview: The network administrator must access each device and set up the syslog parameters to direct log data to the FortiSIEM collector's IP address.

Discovery Process: While FortiSIEM can discover network devices using SNMP, WMI, and other protocols, the configuration of syslog on these devices is beyond its scope and requires manual intervention.

References: FortiSIEM 6.3 User Guide, Device Configuration and Syslog Integration sections, which explain the requirements and steps for setting up syslog forwarding on network devices.

## NEW QUESTION # 12

Refer to the exhibit.

An administrator is trying to identify an issue using an expression based on the Expression Builder settings shown in the exhibit; however, the error message shown in the exhibit indicates that the expression is invalid.

Which is the correct expression?

- A. Matched Events(COUNT)
- B. Matched Events COUNT()
- C. (COUNT) Matched Events
- D. COUNT(Matched Events)

**Answer: D**

Explanation:

Expression Builder in FortiSIEM: The Expression Builder is used to create expressions for analyzing event data.

Correct Syntax: The correct syntax for counting matched events is COUNT(Matched Events).

\* Function: COUNT is a function that takes a parameter, in this case, "Matched Events," to count the number of occurrences.

Common Errors: Incorrect syntax, such as reversing the order or using parentheses improperly, can lead to invalid expressions.

References: FortiSIEM 6.3 User Guide, Expression Builder section, which explains the correct syntax and usage for creating valid expressions for event analysis.

## NEW QUESTION # 13

In the CMDB page for a network device, the Configuration tab is unexpectedly empty. Which is a possible reason?

- A. The SNMP credential was a read-only credential.
- B. A Telnet/SSH credential was not configured for discovery.
- C. Configuration push is not enabled on the network device.
- D. Syslog was only being sent to a worker.

**Answer: B**

#### NEW QUESTION # 14

What does the Frequency field determine on a rule?

- A. How often the rule will trigger.
- **B. How often the rule will trigger for the same condition.**
- C. How often the rule will evaluate the subpattern.
- D. How often the rule will take a clear action.

**Answer: B**

Explanation:

Rule Evaluation in FortiSIEM: Rules in FortiSIEM are evaluated periodically to check if the defined conditions or subpatterns are met.

Frequency Field: The Frequency field in a rule determines the interval at which the rule's subpattern will be evaluated.

\* Evaluation Interval: This defines how often the system will check the incoming events against the rule's subpattern to determine if an incident should be triggered.

\* Impact on Performance: Setting an appropriate frequency is crucial to balance between timely detection of incidents and system performance.

Examples:

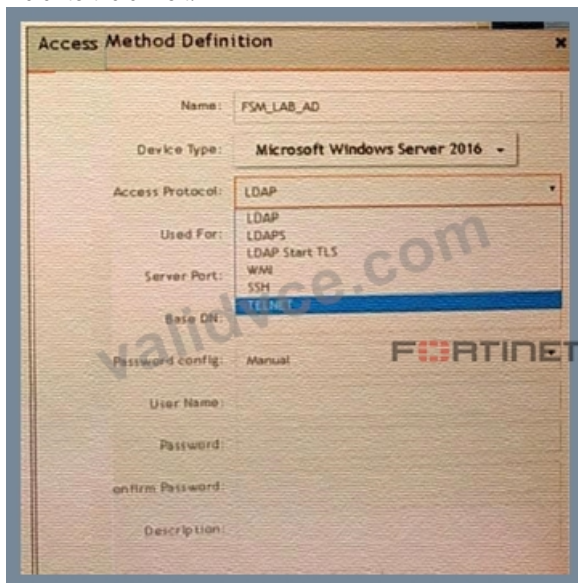

\* If the Frequency is set to 5 minutes, the rule will evaluate the subpattern every 5 minutes.

\* This means that every 5 minutes, the system will check if the conditions defined in the subpattern are met by the incoming events.

References: FortiSIEM 6.3 User Guide, Rules and Incidents section, which explains the Frequency field and how it impacts the evaluation of subpatterns in rules.

#### NEW QUESTION # 15

Refer to the exhibit.

A FortiSIEM administrator wants to collect both SIEM event logs and performance and availability metrics (PAM) events from a Microsoft Windows server. Which protocol should the administrator select in the Access Protocol drop-down list so that FortiSIEM will collect both SIEM and PAM events?

- **A. WMI**
- B. TELNET
- C. LDAP start TLS
- D. LDAPS

**Answer: A**

Explanation:

Collecting SIEM and PAM Events: To collect both SIEM event logs and Performance and Availability Monitoring (PAM) events from a Microsoft Windows server, a suitable protocol must be selected.

WMI Protocol: Windows Management Instrumentation (WMI) is the appropriate protocol for this task.

\* SIEM Event Logs: WMI can collect security, application, and system logs from Windows devices.

\* PAM Events: WMI can also gather performance metrics, such as CPU usage, memory utilization, and disk activity.  
 Comprehensive Data Collection: Using WMI ensures that both types of data are collected efficiently from the Windows server.  
 References: FortiSIEM 6.3 User Guide, Data Collection Methods section, which details the use of WMI for collecting various types of logs and performance metrics.
