It is not easy for you to make a decision of choosing the NSE6_FSW-7.2 study materials from our company, because there are a lot of study materials about the exam in the market. However, if you decide to buy the NSE6_FSW-7.2 study materials from our company, we are going to tell you that it will be one of the best decisions you have made in recent years. As is known to us, the NSE6_FSW-7.2 Study Materials from our company are designed by a lot of famous experts and professors in the field.

Fortinet NSE6_FSW-7.2 Certification is an important credential for network security professionals who work with Fortinet's FortiSwitch products. It demonstrates the candidate's expertise in deploying, configuring, and managing secure networks using Fortinet's technology. Holding this certification can help professionals to advance their careers and increase their earning potential.

The NSE6_FSW-7.2 certification exam is a valuable credential for IT professionals who are seeking to advance their careers in the field of cybersecurity. Fortinet NSE 6 - FortiSwitch 7.2 certification demonstrates that the candidate has the knowledge and skills

required to manage FortiSwitch devices, and it is recognized by employers around the world as a mark of excellence in the field of cybersecurity.

Fortinet NSE 6 - FortiSwitch 7.2 Sample Questions (Q23-Q28):

NEW QUESTION # 23

Which two statements about VLAN assignments on FortiSwitch ports are true? (Choose two.)

- A. Only assign one native VLAN on a port
- B. Configure a native VLAN on the FortiLink
- C. Assign an IP address and subnet mask to FortiSwitch VLANs
- D. Assign untagged VLANs using FortiGate CLI

Answer: A,D

Explanation:

VLAN assignments on FortiSwitch ports must follow certain rules and guidelines to ensure network integrity and proper traffic segregation:

Only Assign One Native VLAN on a Port (C):

Native VLAN Configuration: Each switch port can have only one native VLAN. The native VLAN carries untagged traffic for that port. If the port receives untagged frames, they are assumed to belong to the native VLAN.

Importance of Singular Native VLAN: This is crucial for preventing VLAN hopping attacks and ensures clear and secure VLAN demarcation on each port.

Assign Untagged VLANs Using FortiGate CLI (D):

CLI Configuration: Untagged VLANs, often equivalent to the native VLAN, can be assigned through the FortiGate CLI when managing a FortiSwitch via FortiLink. This allows for central management and configuration of VLANs across connected switches.

Operational Efficiency: Using the CLI ensures that VLAN settings are applied uniformly, reducing the likelihood of misconfigurations that might occur when managing VLANs individually on each switch.

What two conclusions can be made regarding DHCP snooping configuration? (Choose two.)

- A. Maximum value to accept clients DHCP request is configured as per DHCP server range.

- B. FortiSwitch is configured to trust DHCP replies coming on FortiLink interface.
- C. DHCP clients that are trusted by DHCP snooping configured is only one.
- D. Global configuration for DHCP snooping is set to forward DHCP client requests on all ports in the VLAN.

Answer: B,C

NEW QUESTION # 25

Which Ethernet frame can create Layer 2 flooding due to all bytes on the destination MAC address being set to all FF?

- A. The broadcast Ethernet frame
- B. The unicast Ethernet frame
- C. The multicast Ethernet frame
- D. The anycast Ethernet frame

Answer: A

NEW QUESTION # 26

What feature can network administrators use to segment network operations and the administration of managed FortiSwitch devices on FortiGate?

- A. FortiLink split interface
- B. FortiGate clustering protocol
- C. Multi-chassis link aggregation trunk
- D. FortiGate multi-tenancy

Answer: D

NEW QUESTION # 27

Exhibit.

What conditions does a FortiSwitch need to have to successfully configure the options shown in the exhibit above? (Choose two.)

- A. The CLI commands are enabling a split port into four 10Gbps interfaces.
- B. The FortiSwitch model is equipped with a maximum of 54 interfaces.
- C. The split port can be assigned to native VLAN
- D. The port full speed prior the split was 100G SFP+

Answer: A,B
