As the talent competition increases in the labor market, it has become an accepted fact that the NCP-US-6.5 certification has become an essential part for a lot of people, especial these people who are looking for a good job, because the certification can help more and more people receive the renewed attention from the leader of many big companies. So it is very important for a lot of people to gain the NCP-US-6.5 certification. We must pay more attention to the certification and try our best to gain the NCP-US-6.5 Certification. First of all, you are bound to choose the best and most suitable study materials for yourself to help you prepare for your exam. Now we would like to introduce the NCP-US-6.5 certification guide from our company to you. We sincerely hope that our study materials will help you through problems in a short time.

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	- Analyze and Monitor Nutanix Unified Storage - Describe the use of Data Lens for data security
Topic 2	- Troubleshoot issues related to Nutanix Objects - Troubleshoot issues related to Nutanix Volumes
Topic 3	- Troubleshoot issues related to Nutanix Files - Explain Data Management processes for Files and Objects
Topic 4	- Utilize File Analytics for data security - Troubleshoot Nutanix Unified Storage - Configure Nutanix Volumes
Topic 5	- Identify the steps to deploy Nutanix Files - Given a scenario, determine product and sizing parameters
Topic 6	- Configure Nutanix Objects - Describe how to monitor performance and usage

Topic 7	• Given a scenario, configure shares, buckets, and or Volume Groups • Troubleshoot a failed upgrade for Files • Objects
Topic 8	• Configure Nutanix Files with advanced features • Determine the appropriate method to ensure data availability • recoverability

Top Nutanix New NCP-US-6.5 Exam Book Are Leading Materials & Latest updated New NCP-US-6.5 Test Pass4sure

The third and last format is the Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) desktop practice test software that can be used on Windows laptops and PCs. Students with laptops or computers can access the software and prepare for it efficiently. The Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 (NCP-US-6.5) dumps of BraindumpsPrep have many premium features, one of which is practice exams (desktop and web-based).

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q22-Q27):

NEW QUESTION # 22

Which port is required between a CVM or Prism Central to insights.nutanix.com for Data Lens configuration?

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Data Lens is a SaaS that provides file analytics and reporting, anomaly detection, audit trails, ransomware protection features, and tiering management for Nutanix Files. To configure Data Lens, one of the network requirements is to allow HTTPS (port 443) traffic between a CVM or Prism Central to insights.nutanix.com. This allows Data Lens to collect metadata and statistics from the FSVMs and display them in a graphical user interface. Reference: Nutanix Files Administration Guide, page 93; Nutanix Data Lens User Guide

NEW QUESTION # 23

An administrator needs to allow individual users to restore files and folders hosted in Files. How can the administrator meet this requirement?

- **A. Enable Self-Service Restore on shares/exports.**
- B. Configure a Protection Domain on the FSVMs.
- C. Configure a Protection Domain for the shares/exports.
- D. Enable Self-Service Restore on the FSVMs.

Answer: A

Explanation:

Self-Service Restore (SSR) is a feature that allows individual users to restore files and folders hosted in Files without requiring administrator intervention. SSR can be enabled on a per-share or per-export basis, and users can access the snapshots of their data through a web portal or a Windows client application¹. References: Nutanix Files Administration Guide¹

NEW QUESTION # 24

After configuring Smart DR, an administrator is unable to see the policy in the Policies tab. The administrator has confirmed that all FSVMs are able to connect to Prism Central via port 9440 bidirectional.

What is the possible reason for this issue?

- A. The primary and recovery file servers do not have the same version.
- B. The primary and recovery file servers do not have the same protocols.
- C. Port 7575 should be open for all External/Client IPs of FSVMs on the Source and Target cluster.
- D. Port 7575 should be open for all Internal/Storage IPs of FSVMs on the Source and Target.

Answer: C

Explanation:

Smart DR is a feature that allows share-level replication between active file server instances for disaster recovery. To configure Smart DR, one of the prerequisites is to open TCP port 7575 for all External/Client IPs of FSVMs on the Source and Target cluster. This port is used for communication between the FSVMs and Prism Central. If this port is not open, Smart DR policies will not be visible in the Policies tab in Prism Central. Reference: Nutanix Files Administration Guide, page 79; Nutanix Files Solution Guide, page 9

NEW QUESTION # 25

An administrator wants to monitor their Files environment for suspicious activities, such as mass deletion or access denials.

How can the administrator be alerted to such activities?

How can the administrator be alerted to such activities?

- A. Configure Files to use ICAP servers, with monitors for desired activities.
- B. Configure Alerts & Events in the Files Console, filtering for Warning severity.
- C. Create a data protection policy in the Files view in Prism Central.
- D. Deploy the Files Analytics VM, and configure anomaly rules.

Answer: D

Explanation:

The administrator can monitor their Files environment for suspicious activities, such as mass deletion or access denials, by deploying the File Analytics VM and configuring anomaly rules. File Analytics is a feature that provides insights into the usage and activity of file data stored on Files. File Analytics consists of a File Analytics VM (FAVM) that runs on a Nutanix cluster and communicates with the File Server VMs (FSVMs) that host the file shares. File Analytics can alert the administrator when there is an unusual or suspicious activity on file data, such as mass deletion, encryption, permission change, or access denial. The administrator can configure anomaly rules to define the threshold, time window, and notification settings for each type of anomaly. References: Nutanix Files Administration Guide, page 93; Nutanix File Analytics User Guide

NEW QUESTION # 26

An administrator is tasked with creating an Objects store with the following settings:

* Medium Performance (around 10,000 requests per second)

* 10 TiB capacity

* Versioning disabled

* Hosted on an AHV cluster

Immediately after creation, the administrator is asked to change the name of Objects store. Who will the administrator achieve this request?

- A. Delete and recreate a new Objects store with the updated name
- B. Enable versioning and then rename the Object store, disable versioning
- C. The Objects store can only be renamed if hosted on ESXI.

Answer: A

Explanation:

The administrator can achieve this request by deleting and recreating a new Objects store with the updated name. Objects is a feature that allows users to create and manage object storage clusters on a Nutanix cluster.

Objects clusters can provide S3-compatible access to buckets and objects for various applications and users.

Objects clusters can be created and configured in Prism Central. However, once an Objects cluster is created, its name cannot be changed or edited. Therefore, the only way to change the name of an Objects cluster is to delete the existing cluster and create a new cluster with the updated name.
