

New OmniStudio-Consultant Braindumps Questions & OmniStudio-Consultant Exam Sample

What's more, part of that DumpsQuestion OmniStudio-Consultant dumps now are free: https://drive.google.com/open?id=1P6sgv7kW5j5kbluq_wlcW-d1xWfPF1kN

Many people want to be the competent people which can excel in the job in some area and be skillful in applying the knowledge to the practical working in some industry. But the thing is not so easy for them they need many efforts to achieve their goals. Passing the test OmniStudio-Consultant Certification can make them become that kind of people and if you are one of them buying our OmniStudio-Consultant study materials will help you pass the OmniStudio-Consultant test smoothly with few efforts needed.

Salesforce OmniStudio-Consultant Certification Exam is designed to test the skills and knowledge of individuals who are interested in becoming certified as a Salesforce Certified OmniStudio Consultant. Salesforce Certified OmniStudio Consultant certification is intended for professionals who possess a deep understanding of Salesforce's OmniStudio platform and can demonstrate their ability to design and implement solutions that leverage this technology to meet business objectives.

To become a Salesforce Certified OmniStudio Consultant, candidates must demonstrate proficiency in various aspects of the platform, including data modeling, user interface design, workflow automation, and integration with external systems. Salesforce Certified OmniStudio Consultant certification exam consists of multiple-choice questions and scenarios that test the candidate's ability to apply their knowledge to real-world situations. Candidates must also have practical experience working with the OmniStudio platform, as well as a deep understanding of Salesforce best practices and methodologies.

OmniStudio-Consultant Exam Sample | Valid OmniStudio-Consultant Exam Tutorial

With OmniStudio-Consultant study engine, you will get rid of the dilemma that you work hard but cannot improve. With our OmniStudio-Consultant learning materials, you can spend less time but learn more knowledge than others. OmniStudio-Consultant exam questions will help you reach the peak of your career. Just think of that after you get the Salesforce Certified OmniStudio Consultant OmniStudio-Consultant Certification, you will have a lot of opportunities of going to bigger and better company and getting higher incomes!

Salesforce Certified OmniStudio Consultant Sample Questions (Q40-Q45):

NEW QUESTION # 40

A health provider company is building a new application for its medical officers. The company wants to display medical test reports for patients. Medical test reports is a custom object, related to the Patients object. For each patient, the company needs to list each medical test report including the report name, date requested, and date generated. From each medical test report, the user should be able to take the following actions:

- * Approve
- * Print for Review
- * Send for Retest

Which OmniStudio tools should the consultant use to design a solution to meet these requirements?

- **A. Single FlexCard with multiple actions**
- B. OmniScript with multiple Step elements
- C. Multiple FlexCards with single action
- D. Salesforce list view with custom buttons/links

Answer: A

NEW QUESTION # 41

A consultant is tasked with migrating Calculation Matrices and Procedures as Decision Matrices and Expression Sets respectively. What is a key consideration when migrating Calculation Matrices and Procedures?

- A. Matrices can be migrated with minimal considerations.
- B. Matrices can be migrated without considerations.
- C. Procedures can be migrated without considerations.
- **D. Looping procedures cannot be migrated as expression sets.**

Answer: D

Explanation:

The task involves migrating legacy Calculation Matrices to Decision Matrices and Calculation Procedures to Expression Sets in OmniStudio. A key consideration arises from the differences in functionality between these tools, particularly with looping logic, making D the correct answer.

Here's why D. Looping procedures cannot be migrated as Expression Sets is the correct answer:

* Migration Context:

* Calculation Matrices # Decision Matrices: Calculation Matrices (from older Vlocity tools) are lookup tables that map inputs to outputs. They migrate to Decision Matrices in OmniStudio, which serve the same purpose (e.g., returning a discount based on inputs) and are generally straightforward to convert, as both are data-driven tables stored as Salesforce metadata.

* Calculation Procedures # Expression Sets: Calculation Procedures are sequential, logic-driven processes that can include formulas, conditions, and loops. They migrate to Expression Sets in OmniStudio, which are collections of reusable expressions (formulas or conditions) executed in a specific order.

* Key Consideration - Looping:

* Calculation Procedures: These legacy procedures support looping logic, such as iterating over a list of items (e.g., processing multiple line items in a quote to calculate totals).

* Expression Sets: Expression Sets in OmniStudio are designed for linear, non-iterative calculations. They execute a series of expressions (e.g., Total = Price * Quantity) but do not natively support looping constructs like "for each" or "while" loops. Looping requires an Integration Procedure or custom Apex in OmniStudio, not Expression Sets.

* Impact: If a Calculation Procedure includes looping (e.g., summing values across a JSON array), it cannot be directly migrated to an Expression Set without rearchitecting the logic. The consultant must consider alternative tools (e.g., an Integration Procedure with a Loop Block) to handle such cases.

* Why It's Key: Failing to account for looping can break the migrated process, as Expression Sets lack this capability. Identifying and addressing looping logic upfront is critical to ensure functional equivalence post-migration.

Now, let's examine why the other options are incorrect:

* A. Procedures can be migrated without considerations: This is false. Calculation Procedures often include complex logic (e.g., loops, branching), and Expression Sets have limitations (e.g., no looping), requiring careful analysis and potential redesign during migration.

* B. Matrices can be migrated with minimal considerations: While migrating Calculation Matrices to Decision Matrices is relatively straightforward (both are lookup tables), "minimal considerations" understates potential issues like data mapping or deprecated features, though looping isn't a factor here.

This isn't the key consideration compared to D.

* C. Matrices can be migrated without considerations: This is incorrect. Even for matrices, considerations like field mappings, data type compatibility, or version differences exist, though they're less complex than procedure migrations.

References:

- * Salesforce OmniStudio Documentation: Migration Guide - Discusses migrating Calculation Matrices and Procedures, noting limitations like looping in Expression Sets.
- * Salesforce OmniStudio Developer Guide: Expression Sets - Confirms Expression Sets lack looping, unlike Integration Procedures.

NEW QUESTION # 42

A company wants to create a guided process for their customers. The process needs to retrieve data from Salesforce as well as external systems, and the steps of the process will branch depending on input from the user. Users will complete the process in a single session.

How should the consultant design the solution to meet these requirements?

- A. OmniScripts and DataRaptors
- B. FlexCards and DataRaptors
- **C. OmniScripts and Integration Procedures**
- D. FlexCards and Integration Procedures

Answer: C

NEW QUESTION # 43

A business has a project that must be completed soon in order to meet important deadlines. However, the developer on the project has left the company, and the new team on the project has decided to use OmniStudio tools. The development work completed so far was done using APEX code. The new team must complete the project following these guidelines:

- * Minimize implementation time
- * Ensure end-user processes are as simple as possible
- * Find a way to ensure optimal UX

In this scenario, what two actions should the consultant recommend to the project team? Choose 2 answers

- A. Use existing APEX classes as data sources
- B. Replace existing APEX using DataRaptors and HTTPActions
- **C. Implement FlexCards and OmniScripts for the front-end**
- D. Create new LWC templates for branding and styling

Answer: C

Explanation:

Explanation

The two actions that the consultant should recommend to the project team are replace existing APEX using DataRaptors and HTTPActions, and implement FlexCards and OmniScripts for the front-end. Replacing existing APEX using DataRaptors and HTTPActions would reduce implementation time, as these tools are declarative and do not require coding. Implementing FlexCards and OmniScripts for the front-end would ensure end-user processes are as simple as possible, as these tools provide guided interactions and contextual data. Creating new LWC templates for branding and styling would increase implementation time, as this would require coding and testing. Using existing APEX classes as data sources would not ensure optimal UX, as this would limit the flexibility and scalability of the solution.

NEW QUESTION # 44

A consultant receives a requirement to display products installed at an account site in a customer's 360° FlexCard view. The business requires that the width of the fields displayed should change depending on the device used to view the FlexCard. For example, the Product Name and Model field elements should display at full width on mobile devices, but they should shrink to 60% on devices such as laptops and desktops.

How should the consultant design the FlexCard to meet this requirement?

- **A. Create two states, one for mobile devices and another for non-mobile devices**
- B. Enable the Responsive feature on the Product Name and Model field elements
- C. Create two FlexCards, one for mobile devices and another for non-mobile devices
- D. Enable the Mobile-First feature in FlexCard settings

Answer: A

Explanation:

Explanation

The correct way to design the FlexCard to meet this requirement is to create two states, one for mobile devices and another for non-mobile devices. States allow the designer to define different layouts and behaviors for the same FlexCard based on conditions. The width of the fields can be adjusted for each state using the Size property. Enabling the Responsive feature on the field elements would not change their width, but only their alignment. Enabling the Mobile-First feature in FlexCard settings would not affect the width of the fields, but only the order in which they are displayed. Creating two FlexCards, one for mobile devices and another for non-mobile devices, would create redundant code and maintenance issues.

NEW QUESTION # 45

.....

Our company is trying to satisfy every customer's demand. Of course, we also attach great importance on the quality of our OmniStudio-Consultant real test. Every product will undergo a strict inspection process. In addition, there will have random check among different kinds of OmniStudio-Consultant Study Materials. The quality of our OmniStudio-Consultant exam quiz deserves your trust. Most of our customers are willing to introduce their friends to purchase our OmniStudio-Consultant learning dumps.
