The TorrentValid recognizes that students invest significant time and resources in their Certified Professional - PingAccess (PAP-001) certification preparation. Therefore, the TorrentValid is committed to save their money with up to 365 days of free questions updates. The TorrentValid regularly updates its practice material to ensure that users have the most up-to-date questions. The TorrentValid also offers a money-back guarantee (terms and conditions apply) for those who fail to get success, which demonstrates its commitment to users' success.

Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.

Topic 2	• Integrations: This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings.
Topic 3	• Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.
Topic 4	• Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.

PAP-001 Reliable Practice Materials - Valid Dumps PAP-001 Files

After you visit the pages of our PAP-001 test torrent on the websites, you can know the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the Certified Professional - PingAccess guide torrent, the price of the product and the discounts. In the pages of our product on the website, you can find the details and guarantee and the contact method, the evaluations of the client on our PAP-001 Test Torrent and other information about our product. So it is very convenient for you.

Ping Identity Certified Professional - PingAccess Sample Questions (Q44-Q49):

NEW QUESTION # 44

According to a new business requirement, critical applications require dual-factor authentication when specific resources are accessed in those applications. Which configuration object should the administrator use in the applications?

- A. Auth Token Management
- **B. Authentication Requirements**
- C. UI Authentication
- D. Authentication Challenge Policy

Answer: B

Explanation:

PingAccess enforces step-up or multi-factor authentication using Authentication Requirements, which can be applied to specific resources within an application.

Exact Extract:

"Authentication requirements allow administrators to configure additional authentication (for example, MFA) when accessing sensitive application resources."

* Option A (UI Authentication) applies to access to the admin console, not application resources.

* Option B (Auth Token Management) relates to OAuth token lifetimes and refresh, not MFA enforcement.

* Option C (Authentication Requirements) is correct - these rules enforce MFA or step-up auth for specific URLs/resources.

* Option D (Authentication Challenge Policy) governs how failed auth challenges are presented but does not enforce MFA.

Reference: PingAccess Administration Guide - Authentication Requirements

NEW QUESTION # 45

Under which top-level directory are PingAccess configuration archives stored?

- A. tools
- B. bin
- C. conf

- D. data

Answer: D

Explanation:

PingAccess automatically creates configuration archive backups whenever changes are made. These are stored in the data/archive directory.

Exact Extract:

"PingAccess stores configuration archive files in the PA_HOME/data/archive directory."

- * Option A (tools) is incorrect - contains administrative scripts.
- * Option B (conf) is incorrect - holds configuration files like run.properties.
- * Option C (data) is correct - archives are stored under data/archive.
- * Option D (bin) is incorrect - contains executables and scripts.

Reference: PingAccess Administration Guide - Configuration Archives

NEW QUESTION # 46

What is the purpose of the engine.ssl.protocols in the run.properties file?

- A. To configure the supported TLS versions
- B. To configure the supported HTTPS port
- C. To configure SSL protocols used for clustering
- D. To configure the supported ciphers

Answer: A

Explanation:

The property engine.ssl.protocols in run.properties specifies the TLS protocol versions that PingAccess engines will support for incoming HTTPS traffic.

Exact Extract:

"The engine.ssl.protocols property configures which TLS versions are enabled for HTTPS listeners."

- * Option A (ciphers) is incorrect - cipher suites are defined separately, not in this property.
- * Option B (HTTPS port) is incorrect - the port is defined in the engine listener, not here.
- * Option C (TLS versions) is correct - this property controls TLS version support (e.g., TLSv1.2, TLSv1.3).
- * Option D (clustering) is incorrect - clustering does not depend on this property.

Reference: PingAccess Administration Guide - run.properties settings

NEW QUESTION # 47

A modified application now requires additional attributes to be passed in the headers. What needs to be modified in order to pass the additional attributes?

- A. JWT Identity Mapping
- B. HTTP Request Header Rule
- C. Header Identity Mapping
- D. Web Session Attribute Rule

Answer: C

Explanation:

To pass user attributes into HTTP headers for applications, PingAccess uses Identity Mappings. When attributes need to be passed specifically as headers, the administrator must update the Header Identity Mapping.

Exact Extract:

"Header identity mappings map attributes from a user's web session to HTTP headers that are then sent to the back-end application."

- * Option A (HTTP Request Header Rule) is incorrect - this adds or modifies static request headers, not user attributes.
- * Option B (Header Identity Mapping) is correct - this maps identity attributes into headers dynamically.
- * Option C (JWT Identity Mapping) is incorrect - that's used for passing attributes as claims in JWTs.
- * Option D (Web Session Attribute Rule) is incorrect - that is for access control evaluation, not propagation of attributes.

Reference: PingAccess Administration Guide - Identity Mapping (Header Identity Mapping)

An auto parts company wants to protect the path/parts/suspension/struts/manufacturer. Resources appear under an applicationContext Root of /partswith default ordering.
Which resource will the policy engine select?

- Answer: A**

Reference: PingAccess Administration Guide -Resource Path Matching and Ordering
