Actual Professional-Cloud-Database-Engineer Test Answers - Professional-Cloud-Database-Engineer Verified Answers

Our professional experts have carefully compiled our Professional-Cloud-Database-Engineer practice braindumps to be the best seller in the market. The information is provided in the form of our Professional-Cloud-Database-Engineer exam questions and answers, following the style of the real exam paper pattern. So if you buy our Professional-Cloud-Database-Engineer training guide, you will find that it is easy to pass the exam for it is exam-oriented. What is more, you will learn a lot of work skills according to the latest information.

Google Professional-Cloud-Database-Engineer Certification Exam is a valuable credential for database professionals who want to demonstrate their expertise in managing cloud-native database solutions on the Google Cloud Platform. Professional-Cloud-Database-Engineer exam is challenging, but passing it signifies that the candidate has a deep understanding of Google Cloud Platform's database services and can design, develop, and manage cloud-native database solutions with confidence.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q135-Q140):

NEW QUESTION # 135

Your company is evaluating Google Cloud database options for a mission-critical global payments gateway application. The application must be available 24/7 to users worldwide, horizontally scalable, and support open source databases. You need to select an automatically sharded, fully managed database with 99.999% availability and strong transactional consistency. What should you do?

- A. Select Cloud SQL.
- **B. Select Cloud Spanner.**
- C. Select Bigtable.
- D. Select Bare Metal Solution for Oracle.

Answer: B

Explanation:

The application must be available 24/7 to users worldwide, horizontally scalable, and support open source databases.

NEW QUESTION # 136

Your organization has hundreds of Cloud SQL for MySQL instances. You want to follow Google-recommended practices to optimize platform costs. What should you do?

- A. Remove inactive user accounts.
- **B. Run the Recommender API to identify overprovisioned instances.**
- C. Use Query Insights to identify idle instances.
- D. Build indexes on heavily accessed tables.

Answer: B

Explanation:

The Cloud SQL overprovisioned instance recommender helps you detect instances that are unnecessarily large for a given workload. It then provides recommendations on how to resize such instances and reduce cost. This page describes how this recommender works and how to use it. [https://cloud.google.com/sql/docs/mysql/recommender-sql-overprovisioned#:~:text=The%20Cloud%20SQL%20overprovisioned%20instance%20recommender%20helps%20you%20detect%20instances%20that%20are%20unnecessarily%20large%20for%20a%20given%20workload](https://cloud.google.com/sql/docs/mysql/recommender-sql-overprovisioned#:~:text=The%20Cloud%20SQL%20overprovisioned%20instance%20recommender%20helps%20you%20detect%20instances%20that%20are%20unnecessarily%20large%20for%20a%20given%20workload,https://cloud.google.com/sql/docs/mysql/recommender-sql-overprovisioned#:~:text=The%20Cloud%20SQL%20overprovisioned%20instance%20recommender%20helps%20you%20detect%20instances%20that%20are%20unnecessarily%20large%20for%20a%20given%20workload)

NEW QUESTION # 137

Your company is migrating their MySQL database to Cloud SQL and cannot afford any planned downtime during the month of December. The company is also concerned with cost, so you need the most cost-effective solution. What should you do?

- A. Create MySQL read replicas in different zones so that, if any downtime occurs, the read replicas will act as the primary instance during the month of December.
- **B. Use Cloud SQL maintenance settings to prevent any maintenance during the month of December.**
- C. Open a support ticket in Google Cloud to prevent any maintenance in that MySQL instance during the month of December.
- D. Create a MySQL regional instance so that, if any downtime occurs, the standby instance will act as the primary instance during the month of December.

Answer: B

Explanation:

<https://cloud.google.com/sql/docs/mysql/maintenance?hl=fr>

NEW QUESTION # 138

Your organization works with sensitive data that requires you to manage your own encryption keys. You are working on a project that stores that data in a Cloud SQL database. You need to ensure that stored data is encrypted with your keys. What should you do?

- A. Use Cloud SQL Auth proxy.
- **B. Export data periodically to a Cloud Storage bucket protected by Customer-Supplied Encryption Keys.**

- C. Use customer-managed encryption keys with Cloud SQL.
- D. Connect to Cloud SQL using a connection that has SSL encryption.

Answer: D

NEW QUESTION # 139

Your organization deployed a new version of a critical application that uses Cloud SQL for MySQL with high availability (HA) and binary logging enabled to store transactional information. The latest release of the application had an error that caused massive data corruption in your Cloud SQL for MySQL database. You need to minimize data loss. What should you do?

- A. Reload the Cloud SQL for MySQL database using the LOAD DATA command to load data from CSV files that were used to initialize the instance.
- B. Fail over to the Cloud SQL for MySQL HA instance. Use that instance to recover the transactions that occurred before the corruption.
- C. Open the Google Cloud Console, navigate to SQL > Backups, and select the last version of the automated backup before the corruption.
- D. Perform a point-in-time recovery of your Cloud SQL for MySQL database, selecting a date and time before the data was corrupted.

Answer: D

Explanation:

Binary Logging enabled, with that you can identify the point of time the data was good and recover from that point time. https://cloud.google.com/sql/docs/mysql/backup-recovery/pitr#perform_the_point-in-time_recovery_using_binary_log_positions
