## Zscaler Digital Transformation Administrator Sample Questions (Q18-Q23):

### NEW QUESTION # 18

Which of the following is a valid action for a SaaS Security API Data Loss Prevention Rule?

- A. Quarantine Malware
- B. Enable AI/ML based Smart Browser Isolation
- C. Remove External Collaborators and Shareable Link
- D. Create Zero Trust Network Decoy

**Answer: C**

Explanation:

In SaaS Security API DLP policies you can choose "Remove External Collaborators and Shareable Link" as the enforcement action - Zscaler will report the incident, revoke any external collaborators on the file, and delete its external share links.

### NEW QUESTION # 19

What is the default timer in ZDX Advanced for web probes to be sent?

- A. 1 minute
- **B. 10 minutes**
- C. 5 minutes
- D. 30 minutes

**Answer: B**

Explanation:

The default timer for sending web probes in ZDX Advanced is 10 minutes. This means that the system automatically sends performance and availability probes every 10 minutes to monitor the health and responsiveness of web applications or services, providing ongoing metrics for user experience evaluation.

The study guide specifies this default interval as a balance between timely data collection and resource optimization.

### NEW QUESTION # 20

Which of the following are types of device posture?

- A. Detect CrowdStrike, CrowdStrike ZTA score, First name
- B. Unauthorized Modification, OS Version, License Key
- **C. Certificate Trust, File Path, Full Disk Encryption**
- D. Domain Joined, Process Check, Deception Check

**Answer: C**

### NEW QUESTION # 21

An administrator would like users to be able to use the corporate instance of a SaaS application. Which of the following allows an administrator to make that distinction?

- A. Endpoint DLP
- B. URL filtering with SSL inspection
- **C. Cloud application control**
- D. Out-of-band CASB

**Answer: C**

Explanation:

Cloud application control is the feature that allows an administrator to distinguish and enforce policies specifically on the corporate instance of a SaaS application. This enables granular control, allowing users to access the approved corporate SaaS while restricting access to personal or unauthorized instances. Out-of-band CASB generally provides visibility but does not enforce real-time distinctions in this context. URL filtering with SSL inspection and Endpoint DLP serve different purposes, such as content inspection and endpoint data protection, respectively.

The study guide explains that Cloud Application Control policies identify and enforce controls based on SaaS application instances, providing precise policy enforcement aligned with corporate SaaS usage requirements.

### NEW QUESTION # 22

- D. Any HTTP/HTTPS traffic as well as DNS.
