## Sharing-and-Visibility-Architect Reliable Real Test - Valid Sharing-and-Visibility-Architect Exam Pattern

If you plan to apply for the Salesforce Certified Sharing and Visibility Architect (Sharing-and-Visibility-Architect) certification exam, you need the best Sharing-and-Visibility-Architect practice test material that can help you maximize your chances of success. You cannot rely on invalid Sharing-and-Visibility-Architect Materials and then expect the results to be great. So, you must prepare from the updated Salesforce Sharing-and-Visibility-Architect Exam Dumps to crack the Sharing-and-Visibility-Architect exam.

Salesforce Sharing and Visibility Architect certification exam is designed to test an individual's knowledge and skills in the areas of sharing and visibility, data modeling, security, and permissions. Sharing-and-Visibility-Architect exam consists of 60 multiple-choice questions that must be completed within 90 minutes. To pass the exam, candidates must score at least 70%. Sharing-and-Visibility-Architect Exam covers a range of topics, including sharing rules, role hierarchy, record-level security, field-level security, data access, and user authentication. Candidates must have a deep understanding of these topics and how they relate to each other to pass the exam and earn certification.

## Salesforce Certified Sharing and Visibility Architect Sample Questions (Q28-Q33):

### NEW QUESTION # 28

Universal Containers has a set of Account Management users that should only see Accounts once the Account becomes a customer. The Type field on the Account identifies whether the Account is a Prospect, Customer, Partner or Other. Which two methods could an Architect use to enable this sharing requirement, assuming a private sharing model for Accounts?  
Choose 2 answers.

- A. Create an Account Sharing Rule that shares all Accounts owned by Sales to be shared with Account Management roles and subordinates.
- B. Create a Criteria-based Sharing rule that shares the Account to the Account Management Group when the Type is Customer.
- C. Institute a process that calls for the Account Manager to be added to the Account Team once the Account becomes a customer.
- D. Create a Public List View, where Accounts of Type Customer are included and share the List view with the Account Management public group.

**Answer: B,C**

Explanation:

Explanation

The two methods that an Architect could use to enable this sharing requirement are A and D. Option A allows the account manager to access the account once they are added to the account team, which is a type of implicit sharing<sup>5</sup>. Option D allows the account management group to access the account based on a criteria that matches the type field value. The other options are either not relevant or not efficient.

### NEW QUESTION # 29

Which method should be used to grant access to an unrelated group of users?

- A. Role Hierarchy
- B. Public Groups
- C. Sharing Sets

**Answer: B**

Explanation:

Public Groups allow administrators to group unrelated users (individual users, roles, or roles and subordinates) for the purpose of sharing access to records or folders. They are highly flexible and designed specifically for granting access to unrelated groups of users.

\* Option A: Sharing Sets are for granting access based on account or contact relationships for community users, not for unrelated internal users.

\* Option C: Role Hierarchy is unsuitable for this scenario as it is based on hierarchical relationships.

:

Public Groups Overview

### NEW QUESTION # 30

If you want to create some logic that will share certain records in APEX code, you just have to create special records that will open access to the desired records. The aim is to create records of certain type, for example, all share objects for custom objects are named as

- A. MyCustomObject\_\_Share

**Answer: A**

### NEW QUESTION # 31

Universal Containers (UC) delivers training in 500 different regions. The UC operations users team manages course setup, scheduling, and trainer setup. The team members work at a regional level and report to an operations manager. The operations manager requested access to edit ALL scheduled courses owned by the operation users team.  
How should this be achieved?

- A. The operations manager will get access to the scheduled courses by creating an ownership-based sharing rule and share the scheduled courses with the operations manager.
- **B. The operations manager will get access to the scheduled courses owned by the operations users team defined in the Role Hierarchy.**
- C. The operations manager will get access to the scheduled courses by creating a public group, and add the operations manager and the operations users team to the public group.

**Answer: B**

Explanation:

In Salesforce, the Role Hierarchy grants record access to users higher in the hierarchy. If the operations users are below the operations manager in the Role Hierarchy and the object's organization-wide default (OWD) is not "Private," the manager will inherit access to records owned by their subordinates. This approach is automatic and does not require additional sharing rules or groups.

\* Option A: Ownership-based sharing rules are unnecessary if the Role Hierarchy provides the required access.

\* Option C: Using a Public Group is an unnecessary workaround for this scenario when Role Hierarchy fulfills the requirement.

:

Role Hierarchy Overview

### NEW QUESTION # 32

Universal Containers (UC) operates worldwide with offices in more than 100 regions in 10 different countries and has established a very complex role hierarchy to control data visibility. In the new fiscal year UC is planning to reorganize the roles and reassign accounts owners.

Which three features could an architect recommend to avoid problems on this operation? Choose 3 answers

- **A. Deferred Sharing Recalculation**
- B. Skinny table
- **C. Parallel Sharing Rule recalculation**
- **D. Granular Locking**
- E. Partition data using Divisions

**Answer: A,C,D**

### NEW QUESTION # 33
