We have always set great store by superior after sale service, since we all tend to take responsibility for our customers who decide to choose our SAA-C03 training materials. We pride ourselves on our industry-leading standards of customer care. Our worldwide after sale staffs will provide the most considerate after-sale service for you in twenty four hours a day, seven days a week, that is to say, no matter you are or whenever it is, as long as you have any question about our SAA-C03 Exam Torrent or about the exam or even about the related certification, you can feel free to contact our after sale service staffs who will always waiting for you on the internet.

The SAA-C03 exam covers a wide range of topics, including AWS core services, security, networking, storage, databases, and AWS architecture best practices. Candidates must have a strong understanding of AWS services, such as Amazon Elastic Compute Cloud (EC2), Amazon Simple Storage Service (S3), Amazon Relational Database Service (RDS), and Amazon Virtual Private Cloud (VPC), as well as the ability to design and deploy highly available and fault-tolerant systems on the AWS platform.

Holding the Amazon SAA-C03 Certification demonstrates that an individual has the skills and knowledge required to design and deploy highly available and fault-tolerant systems on AWS. It is a valuable certification for professionals looking to advance their career in the cloud computing industry and is highly regarded by employers.

Amazon SAA-C03 (Amazon AWS Certified Solutions Architect – Associate) certification exam is a professional certification that is recognized internationally in the field of cloud computing. AWS Certified Solutions Architect - Associate certification is offered by Amazon Web Services (AWS), which is a subsidiary of Amazon that provides cloud computing services to individuals and organizations. The SAA-C03 certification exam is designed for individuals who want to demonstrate their expertise in designing and deploying scalable, highly available, and fault-tolerant systems on the AWS platform.

Exam Amazon SAA-C03 Tutorial & Dump SAA-C03 Torrent

Our SAA-C03 study materials cover three versions, they can meet all your needs. You can choose different versions according to your own needs. SAA-C03 PDF materials is instant access to download, if you like, it can be transformed into a paper version, you can put it into your bags. SAA-C03 Soft test engine and SAA-C03 online test engine are also can be your choice, SAA-C03 online test engine using the online tool and it can also provide the record for your process, and SAA-C03 online test engine can practice online anytime. If you have the needs like this, just choose us.

Amazon AWS Certified Solutions Architect - Associate Sample Questions (Q362-Q367):

NEW QUESTION # 362

A company has a web application with sporadic usage patterns. There is heavy usage at the beginning of each month, moderate usage at the start of each week, and unpredictable usage during the week. The application consists of a web server and a MySQL database server running inside the data center. The company would like to move the application to the AWS Cloud and needs to select a cost-

effective database platform that will not require database modifications Which solution will meet these requirements?

- **A. MySQL-compatible Amazon Aurora Serverless**
- B. Amazon DynamoDB
- C. MySQL deployed on Amazon EC2 in an Auto Scaling group
- D. Amazon RDS for MySQL

Answer: A

Explanation:

Explanation

Amazon RDS for MySQL is a fully-managed relational database service that makes it easy to set up, operate, and scale MySQL deployments in the cloud. Amazon Aurora Serverless is an on-demand, auto-scaling configuration for Amazon Aurora (MySQL-compatible edition), where the database will automatically start up, shut down, and scale capacity up or down based on your application's needs. It is a simple, cost-effective option for infrequent, intermittent, or unpredictable workloads.

NEW QUESTION # 363

[Design Secure Architectures]

A company has a new mobile app. Anywhere in the world, users can see local news on topics they choose. Users also can post photos and videos from inside the app.

Users access content often in the first minutes after the content is posted. New content quickly replaces older content, and then the older content disappears. The local nature of the news means that users consume 90% of the content within the AWS Region where it is uploaded.

Which solution will optimize the user experience by providing the LOWEST latency for content uploads?

- **A. Upload and store content in Amazon S3. Use S3 Transfer Acceleration for the uploads.**
- B. Upload and store content in Amazon S3 in the Region that is closest to the user. Use multiple distributions of Amazon CloudFront.
- C. Upload and store content in Amazon S3. Use Amazon CloudFront for the uploads.
- D. Upload content to Amazon EC2 instances in the Region that is closest to the user. Copy the data to Amazon S3.

Answer: A

Explanation:

The most suitable solution for optimizing the user experience by providing the lowest latency for content uploads is to upload and store content in Amazon S3 and use S3 Transfer Acceleration for the uploads. This solution will enable the company to leverage the AWS global network and edge locations to speed up the data transfer between the users and the S3 buckets.

Amazon S3 is a storage service that provides scalable, durable, and highly available object storage for any type of data. Amazon S3 allows users to store and retrieve data from anywhere on the web, and offers various features such as encryption, versioning, lifecycle management, and replication¹.

S3 Transfer Acceleration is a feature of Amazon S3 that helps users transfer data to and from S3 buckets more quickly. S3 Transfer Acceleration works by using optimized network paths and Amazon's backbone network to accelerate data transfer speeds. Users can enable S3 Transfer Acceleration for their buckets and use a distinct URL to access them, such as <bucket>.s3-accelerate.amazonaws.com².

The other options are not correct because they either do not provide the lowest latency or are not suitable for the use case.

Uploading and storing content in Amazon S3 and using Amazon CloudFront for the uploads is not correct because this solution is not designed for optimizing uploads, but rather for optimizing downloads. Amazon CloudFront is a content delivery network (CDN) that helps users distribute their content globally with low latency and high transfer speeds. CloudFront works by caching the content at edge locations around the world, so that users can access it quickly and easily from anywhere³. Uploading content to Amazon EC2 instances in the Region that is closest to the user and copying the data to Amazon S3 is not correct because this solution adds unnecessary complexity and cost to the process. Amazon EC2 is a computing service that provides scalable and secure virtual servers in the cloud. Users can launch, stop, or terminate EC2 instances as needed, and choose from various instance types, operating systems, and configurations⁴. Uploading and storing content in Amazon S3 in the Region that is closest to the user and using multiple distributions of Amazon CloudFront is not correct because this solution is not cost-effective or efficient for the use case. As mentioned above, Amazon CloudFront is a CDN that helps users distribute their content globally with low latency and high transfer speeds. However, creating multiple CloudFront distributions for each Region would incur additional charges and management overhead, and would not be necessary since 90% of the content is consumed within the same Region where it is uploaded³.

NEW QUESTION # 364

[Design Secure Architectures]

A solutions architect needs to secure an Amazon API Gateway REST API. Users need to be able to log in to the API by using common external social identity providers (IdPs). The social IdPs must use standard authentication protocols such as SAML or OpenID Connect (OIDC). The solutions architect needs to protect the API against attempts to exploit application vulnerabilities. Which combination of steps will meet these security requirements? (Select TWO.)

- **A. Create an AWS WAF web ACL that is associated with the REST API. Add the appropriate managed rules to the ACL.**
- B. Subscribe to AWS Shield Advanced. Enable DDoS protection. Associate Shield Advanced with the REST API.
- C. Create an API key in API Gateway. Associate the API key with the REST API.
- D. Create an IP address filter in AWS WAF that allows only the social IdPs. Associate the filter with the web ACL and the API.
- **E. Create an Amazon Cognito user pool with a federation to the social IdPs. Integrate the user pool with the REST API.**

Answer: A,E

Explanation:

Step A: AWS WAF with managed rules protects the API against application-layer attacks, such as SQL injection and cross-site scripting (XSS).

Step C: Amazon Cognito provides secure authentication and supports federation with social IdPs using OIDC or SAML. It integrates seamlessly with API Gateway.

Option B: AWS Shield Advanced provides DDoS protection, which is not explicitly required in this scenario.

Option D: API keys provide identification, not authentication, and are insufficient for this use case.

Option E: IP filters in WAF are overly restrictive for federated authentication scenarios.

Amazon Cognito Federation

AWS WAF Managed Rules

NEW QUESTION # 365

A company is designing a new multi-tier web application that consists of the following components:

- * Web and application servers that run on Amazon EC2 instances as part of Auto Scaling groups
- * An Amazon RDS DB instance for data storage

A solutions architect needs to limit access to the application servers so that only the web servers can access them. Which solution will meet these requirements?

- A. Deploy AWS PrivateLink in front of the application servers. Configure the network ACL to allow only the web servers to access the application servers.
- B. Deploy a VPC endpoint in front of the application servers. Configure the security group to allow only the web servers to access the application servers.
- **C. Deploy an Application Load Balancer with a target group that contains the application servers' Auto Scaling group. Configure the security group to allow only the web servers to access the application servers.**
- D. Deploy a Network Load Balancer with a target group that contains the application servers' Auto Scaling group. Configure the network ACL to allow only the web servers to access the application servers.

Answer: C

Explanation:

Application Load Balancer (ALB): ALB is suitable for routing HTTP/HTTPS traffic to the application servers. It provides advanced routing features and integrates well with Auto Scaling groups.

Target Group Configuration:

Create a target group for the application servers and register the Auto Scaling group with this target group.

Configure the ALB to forward requests from the web servers to the application servers.

Security Group Setup:

Configure the security group of the application servers to only allow traffic from the web servers' security group.

This ensures that only the web servers can access the application servers, meeting the requirement to limit access.

Benefits:

Security: Using security groups to restrict access ensures a secure environment where only intended traffic is allowed.

Scalability: ALB works seamlessly with Auto Scaling groups, ensuring the application can handle varying loads efficiently.

NEW QUESTION # 366

A company previously migrated its data warehouse solution to AWS. The company also has an AWS Direct Connect connection. Corporate office users query the data warehouse using a visualization tool. The average size of a query returned by the data warehouse is 50 MB and each webpage sent by the visualization tool is approximately 500 KB. Result sets returned by the data warehouse are not cached.

Which solution provides the LOWEST data transfer egress cost for the company?

- A. Host the visualization tool on premises and query the data warehouse directly over a Direct Connect connection at a location in the same AWS Region.
- B. Host the visualization tool on premises and query the data warehouse directly over the internet.
- C. Host the visualization tool in the same AWS Region as the data warehouse. Access it over the internet.
- **D. Host the visualization tool in the same AWS Region as the data warehouse and access it over a Direct Connect connection at a location in the same Region.**

Answer: D

NEW QUESTION # 367

.....

The AWS Certified Solutions Architect - Associate SAA-C03 practice test is available in three compatible and user-friendly formats. These formats are SAA-C03 desktop practice test software, AWS Certified Solutions Architect - Associate SAA-C03 web-based practice exam, and Amazon SAA-C03 PDF dumps file. All three formats of SAA-C03 study material contain actual and verified AWS Certified Solutions Architect - Associate SAA-C03 Exam Dumps that will help you boost your exam preparation. The Amazon desktop practice test software and web-based SAA-C03 practice test both simulate the actual exam environment and identify your mistakes.
