SAP C-SEC-2405 Test Assessment & Vce C-SEC-2405 Format

As the tech industry continues to evolve and adapt to new technologies, professionals who hold the SAP Certified Associate - Security Administrator (C-SEC-2405) certification are better equipped to navigate these changes and stay ahead of the curve, increasing their value to employers and clients. In today's fast-paced and ever-changing SAP sector, having the SAP Certified Associate - Security Administrator (C-SEC-2405) certification has become a necessary requirement for individuals looking to advance their careers and stay competitive in the job market.

SAP Certified Associate - Security Administrator Sample Questions (Q23-Q28):

NEW QUESTION # 23
What must you do if you want to enforce an additional authorization check when a user starts an SAP transaction?

- A. Assign the authorization object and permissions to the chosen transaction code using transaction SE93.
- B. Assign the authorization object to be checked to the chosen transaction code in the SAP Default authorization data using transaction SU22 and set Check Indicator to "Check".
- C. Assign authorization object S_START to the chosen transaction code with transaction SU24 and specify the Program ID and Object Type.
- D. Assign the authorization object to be checked to the chosen transaction code with transaction SU24 and set Default Status to "Yes".

Answer: C

Explanation:
To enforce an additional authorization check when a user starts an SAP transaction, you need to assign the specific authorization object to the transaction code. This ensures that the system performs an extra check against the user's authorizations before allowing access to the transaction.
* Use Transaction SU24:
* SU24 is the transaction used to maintain authorization default data for transactions and other executables. It allows you to assign authorization objects to transactions and set the check indicators.
* Assign Authorization Object S_START:
* Authorization Object S_STARTis used to control the start of transactions. By assigning this object to a transaction code, you can specify additional checks based on the Program ID and Object Type.
* In SU24, navigate to the desired transaction code and add S_START to its list of authorization objects.
* Specify Program ID and Object Type:
* Within the authorization object S_START, set theProgram IDandObject Typefields to define the scope of the check.
* This setup ensures that when a user attempts to start the transaction, the system checks for the specified authorizations in their user profile.
SAP Security References:
* SAP Help Portal:Authorization Checks and SU24 Maintenance
* SAP Documentation:Using Authorization Object S_START for Transaction Start Checks
* SAP Note:Best Practices for Maintaining Authorization Data with SU24

NEW QUESTION # 24
In the administration console of the Cloud Identity Services, for which system type can you define both read and write transformations?

- A. Target systems
- B. Source systems
- C. Proxy systems

Answer: A

Explanation:
InCloud Identity Services, write transformations allow customization of how data is written to a target system. Both read and write transformations can only be defined forTarget Systems, as they involve sending processed data to external systems or applications.
SAP Security References:
* SAP Cloud Identity Services Transformation Guide
* SAP Target System Integration Documentation

NEW QUESTION # 25

What are some of the rules for SAP-developed roles in SAP S/4HANA Cloud Public Edition? Note:
There are 3 correct answers to this question.

- A. Role maintenance reads applications from role menus.
- B. Manual role authorizations are supported in custom catalogs.
- C. Authorization defaults define role authorizations.
- D. Role maintenance reads applications from a catalog.
- E. Catalogs are assigned to role menus.

Answer: C,D,E

NEW QUESTION # 26

Which user type in SAP S/4HANA Cloud Public Edition is used for API access, system integration, and scenarios where automated data exchange is required?

- A. SAP Support User
- B. SAP Technical User
- C. SAP Administrative User
- D. SAP Communication User

Answer: D

Explanation:
In SAP S/4HANA Cloud Public Edition, the SAP Communication User is specifically designed for API access, system integration, and scenarios requiring automated data exchange. This user type is utilized for machine-to-machine communication, such as integrating SAP systems with external applications or services via APIs, ensuring seamless and secure data flows without human intervention. Unlike SAP Administrative Users, who focus on system management tasks, or SAP Support Users, who are used for troubleshooting and support activities, the Communication User is optimized for programmatic access. The SAP Technical User, while sometimes used in on-premise systems, is not the standard term in SAP S/4HANA Cloud Public Edition for this purpose. The Communication User's role ensures that automated processes, such as data synchronization or third-party integrations, are executed efficiently while maintaining strict security controls and auditability.

NEW QUESTION # 27

Where can you find information on the SAP-delivered default authorization object and value assignments?
Note: There are 2 correct answers to this question.

- A. USOBT
- B. SU24
- C. SU22
- D. USOBT_C

Answer: A,C

NEW QUESTION # 28

......
