These certifications are designed to demonstrate expertise in various areas of Salesforce, from basic administration to advanced development. One of the most prestigious certifications offered by Salesforce is the Salesforce Certified Sharing and Visibility Architect certification.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q46-Q51):

NEW QUESTION # 46

Dreamforce presenters need to be able to edit their presentation details (summary, presenter biographies, etc) on a private custom object in Salesforce (Presentation). All presenters for a presentation are captured on a Presenters junction object between Presenter and User.

How can this be accomplished?

- A. Trigger on Presenter junction object that uses Apex Managed sharing to add or remove access to the related Presentation record.
- B. Give Edit rights to the Presentation record via a Permission set that is given to the Presenters for a record.
- C. Trigger on Presenter junction object that adds the user to the Sales Team for the Presentation record.

Answer: A

Explanation:

Explanation

Adding the user to the Sales Team for the Presentation record will not work, as Sales Teams are only available for standard objects, not custom objects. Giving Edit rights to the Presentation record via a Permission set will not work, as Permission sets are assigned to users, not records. The best option is to use a trigger on Presenter junction object that uses Apex Managed sharing to add or remove access to the related Presentation record based on the junction object records.

NEW QUESTION # 47

Universal Containers is implementing Sales Cloud. During the final quarter of the financial year, sales managers help each other close deals. They requested a solution in Salesforce to allow them to share opportunities with other sales managers from different teams as needed. They also requested that sharing deals should expire automatically 2 weeks after the new fiscal year starts.

Which proposed solution meets the requirements?

- A. Apex sharing to share opportunities with sales managers
- B. Sharing rules to share opportunities with sales managers
- C. Scheduled Apex job to remove access

Answer: A,C

Explanation:

To meet the requirement of sharing opportunities for collaboration and automatically expiring access, the following approach is best:

* Apex Sharing (Answer A): Apex sharing allows sales managers to share opportunities with specific users. This is essential for ad-hoc and granular sharing that isn't feasible with criteria-based or owner-based sharing rules.

* Scheduled Apex Job (Answer B): Use a scheduled Apex job to remove sharing entries after a specific date, ensuring access expires two weeks after the new fiscal year begins. This provides automation and aligns with the requirement for access expiration.

Option C: Sharing rules cannot handle time-based expiration, making them unsuitable for this use case.

Apex Managed Sharing Overview

NEW QUESTION # 48

Susan posts a file to the chatter fees for a record of an object which OWD is private.

Which two statements accurately describe who can view the file by default?

Choose 2 answers.

- A. Susan and users with the View All Data permission.
- B. Susan and users with a shared chatter post link to the file.
- C. Susan and users with access to the record.
- D. Susan only.

Answer: A,C

Explanation:

Explanation

Susan and users with the View All Data permission and Susan and users with access to the record are two statements that accurately describe who can view the file by default. When a file is posted to a record's feed, it inherits the sharing settings of that record. Therefore, only users who can view the record can view the file.

Users with the View All Data permission can view all records and files in the organization. Option C is incorrect, since users with a shared chatter post link to the file can only view the file if they have access to the record as well. Option D is incorrect, since Susan is not the only one who can view the file, but also users who have access to the record or the View All Data permission.

NEW QUESTION # 49

Universal Containers' organization wide-defaults model is Private for the Account object. A sales rep owns two opportunities in one Account. The Sales Rep profile has Create/Edit access to opportunity records.

Which level of access will the sales rep have to the related Account record?

- A. No access
- B. Read access
- C. Read/Create/Edit access

Answer: B

Explanation:

With a private organization-wide default (OWD) model for the Account object, users do not have automatic access to related records they do not own. However, Salesforce provides implicit sharing, which ensures that the owner of a child record, such as an Opportunity, is granted Read access to the related parent Account. This implicit sharing does not extend to Edit or Create permissions unless additional sharing rules, roles, or explicit access mechanisms are configured. Therefore, the sales rep will have Read access to the Account associated with their owned Opportunities. (developer.salesforce.com)

NEW QUESTION # 50

Universal Containers created a public group with certain sales engineers to help on complex deals, as well as a sharing rule to grant access to these opportunities. The Opportunity organization-wide default is Private, What is the impact of these sharing settings?

- A. Other sales engineers who are in the same Role Hierarchy as the sales engineers of the public group will also have access to these records.
- B. Sales engineers and their managers in the Role Hierarchy will also have access to these records.
- C. Subordinates of managers who have sales engineers in the public group will also have access to these records.

Answer: C
