The combination of COF-C02 Exam Guide and sweet service is a winning combination for our company, so you can totally believe that we are sincerely hope you can pass the COF-C02 exam, and we will always provide you help and solutions with pleasure, please contact us through email then.

Snowflake SnowPro Core Certification Exam Sample Questions (Q66-Q71):

NEW QUESTION # 66

Which role must be used to create resource monitors?

- **A. ACCOUNTADMIN**
- B. SECURITYADMIN
- C. SYSADMIN
- D. ORGADMIN

Answer: A

Explanation:

In Snowflake, the ACCOUNTADMIN role is required to create resource monitors. Resource monitors are used to manage and monitor the consumption of compute resources. The ACCOUNTADMIN role has the necessary privileges to create, configure, and manage resource monitors across the account.

Reference:

Snowflake Documentation: Resource Monitors

NEW QUESTION # 67

Which of the following can be used when unloading data from Snowflake? (Choose two.)

- A. Use the ENCODING file format option to change the encoding from the default UTF-8.
- B. The OBJECT_CONSTRUCT function can be used to convert relational data to semi-structured data.
- C. Use the PARSE_JSON function to ensure structured data will be unloaded into the VARIANT data type.
- **D. By using the SINGLE = TRUE parameter, a single file up to 5 GB in size can be exported to the storage layer.**
- **E. When unloading semi-structured data, it is recommended that the STRIP_OUTER_ARRAY option be used.**

Answer: D,E

NEW QUESTION # 68

Who can access the data published in a Data Exchange?

- A. Any Snowflake user, regardless of their role or permissions
- B. Only the data provider who published the data
- **C. Only the users that the data provider has invited to the Data Exchange**
- D. Any user who has been provided with a unique Data Exchange URL

Answer: C

Explanation:

Snowflake's Data Exchange allows data providers to publish data that is accessible only to users they explicitly invite. This mechanism ensures that only approved users or Snowflake accounts have access, adding a layer of security and control. Invited users can query the shared data directly within their Snowflake account without requiring data copies, reducing redundancy and enhancing data accessibility within controlled boundaries. This selective sharing feature is part of Snowflake's secure data-sharing capabilities.

NEW QUESTION # 69

When referring to User-Defined Function (UDF) names in Snowflake, what does the term overloading mean?

- A. There are multiple SQL UDFs with the same names and the same number of arguments.
- **B. There are multiple SQL UDFs with the same names but with a different number of arguments or argument types.**
- C. There are multiple SQL UDFs with the same names and the same number of argument types.
- D. There are multiple SQL UDFs with different names but the same number of arguments or argument types.

Answer: B

Explanation:

In Snowflake, overloading refers to the creation of multiple User-Defined Functions (UDFs) with the same name but differing in the number or types of their arguments. This feature allows for more flexible function usage, as Snowflake can differentiate between functions based on the context of their invocation, such as the types or the number of arguments passed. Overloading helps to create more adaptable and readable code, as the same function name can be used for similar operations on different types of data.

Snowflake Documentation: User-Defined Functions

NEW QUESTION # 70

If a multi-cluster warehouse is using an economy scaling policy, how long will queries wait in the queue before another cluster is started?

- A. 8 minutes
- B. 1 minute
- C. 2 minutes
- **D. 6 minutes**

Answer: D

NEW QUESTION # 71

.....
