CompTIA A+ Certification Exam: Core 1 Sample Questions (Q290-Q295):

NEW QUESTION # 290

A developer is requesting permission to utilize client-side virtualization. The developer would like to write code in a setting isolated from other infrastructure to avoid negative impacts of experimental code. Which of the following provides the best solution for the developer?

- A. Cross-platform functionality
- B. Software compatibility
- C. Test case development
- **D. Sandbox environment**

Answer: D

Explanation:

The best solution for the developer is D. Sandbox environment.

Client-side virtualization is a technology that allows users to run multiple operating systems and applications on the same device, without affecting the host system or the network¹. A sandbox environment is a type of client-side virtualization that creates a secure and isolated space for testing, debugging, or experimenting with code, without risking any damage or interference to the rest of the system².

A sandbox environment can provide several benefits for the developer, such as³:

*It can simulate different scenarios and conditions for the code, such as different operating systems, browsers, devices, network settings, etc.

*It can protect the code from external threats, such as malware, hackers, or unauthorized access.

*It can prevent the code from affecting other applications or processes on the device or the network, such as consuming resources, causing errors, or leaking data.

*It can allow the developer to easily revert any changes or restore the original state of the system, if something goes wrong.

Therefore, a sandbox environment can provide the best solution for the developer who wants to write code in a setting isolated from other infrastructure to avoid negative impacts of experimental code.

NEW QUESTION # 291

A technician is adding one more line at the demarcation point. Which of the following tools would be MOST useful to accomplish this task?

- A. Toner
- **B. Punchdown**
- C. Crimper
- D. Network tap

Answer: B

Explanation:

Explanation

Punchdown tools are used to make connections between wires in a 66/110 block at the demarcation point. The tool is used to insert the wire into the appropriate holes in the block, and it can be used to add additional lines to the demarcation point. The other options are not the correct tools for adding lines to the demarcation point.

A toner is used to identify cable pairs, a network tap is used to monitor network traffic, and a crimper is used to terminate cables.

NEW QUESTION # 292

Which of the following handles touch-screen operation on a mobile device?

- A. Liquid crystal display

- B. Processor
- C. Stylus
- **D. Digitizer**

Answer: D

Explanation:

A digitizer is a component that handles touch-screen operation on a mobile device. It is a layer of material that detects and converts the touch of a finger or a stylus into an electrical signal that can be processed by the device¹². A digitizer works with a display screen to create a touch-screen interface that allows a user to interact with the device by touching pictures or words on the screen.

NEW QUESTION # 293

A technician needs to move a workstation to a different logical network segment. Which of the following technologies should the technician use?

- A. DNS
- B. VPN
- C. DHCP
- **D. VLAN**

Answer: D

Explanation:

A VLAN (Virtual LAN) is used to logically segment a network without requiring physical separation. It enables grouping devices based on function or department regardless of their physical location.

* Option A (DHCP): Assigns IP addresses dynamically but doesn't create network segments.

* Option C (DNS): Resolves domain names to IP addresses, not used for network segmentation.

* Option D (VPN): Provides secure remote access but does not relate to logical segmentation within a local network.

CompTIA A+ Core 1 Exam Objective Reference:

* Objective 2.3: Explain common logical networking concepts.

NEW QUESTION # 294

A technician is on site troubleshooting a customer's laptop. The technician needs to download a software update but the company's proxy is blocking updates. Which of the following would be the MOST appropriate action for the technician to take to get the update?

- A. Connect to a hotspot
- **B. Request a traffic exemption.**
- C. Change the DNS address to 1.1.1.1
- D. Update the Group Policy settings

Answer: B

Explanation:

Because the company's proxy is blocking the update for a reason, and changing the DNS address or connecting to a hotspot could expose the company's network to security risks.

A traffic exemption is a request to allow specific traffic to bypass the company's proxy. This can be done for a variety of reasons, such as when a technician needs to download a software update or access a website that is blocked by the proxy.

To request a traffic exemption, the technician should contact their IT department and explain why they need to download the update. The IT department will then review the request and determine if it is approved.

If the traffic exemption is approved, the technician will be able to download the update without any problems.
