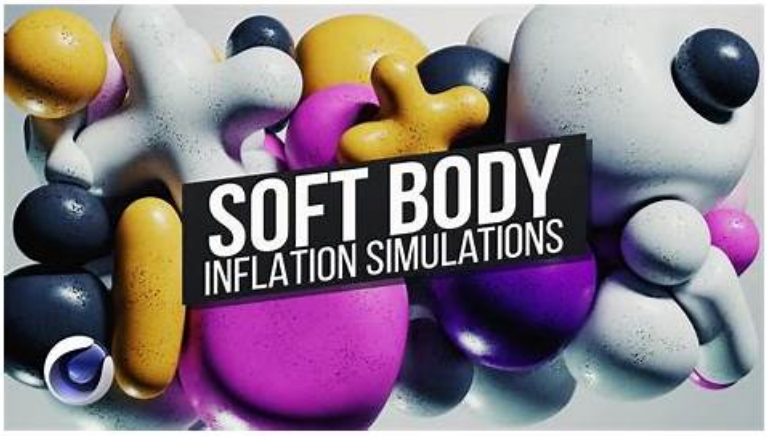
New Soft SPLK-4001 Simulations & Key SPLK-4001 Concepts



P.S. Free 2025 Splunk SPLK-4001 dumps are available on Google Drive shared by TestKingIT: https://drive.google.com/open?id=1_S-o3--lh8ioWLEZFNnxiy_v3KKEipL_

You can use this SPLK-4001 practice exam software to test and enhance your Splunk O11y Cloud Certified Metrics User (SPLK-4001) exam preparation. Your practice will be made easier by having the option to customize the SPLK-4001 Exam Dumps. The fact that it runs without an active internet connection is an incredible comfort for users who don't have access to the internet all the time.

Splunk SPLK-4001 certification exam is designed for individuals who have expertise in using Splunk to monitor and analyze metrics in cloud environments. Splunk O11y Cloud Certified Metrics User certification is ideal for professionals who are interested in validating their knowledge of Splunk's metrics monitoring capabilities and their ability to leverage them to improve operational efficiency and performance. SPLK-4001 exam requires candidates to demonstrate their ability to configure and manage Splunk's metrics collection and analysis tools, as well as their knowledge of best practices for utilizing these tools in a cloud environment.

Splunk SPLK-4001 Certification Exam is an excellent opportunity for IT professionals to demonstrate their knowledge and expertise in using Splunk for cloud monitoring and analysis. By preparing for and passing the exam, you can enhance your career prospects and demonstrate your commitment to staying up-to-date with the latest technologies and best practices in cloud infrastructure monitoring.

Key Splunk SPLK-4001 Concepts, New SPLK-4001 Dumps Book

For candidates who will buy SPLK-4001 training materials online, they may pay more attention to privacy protection. We respect your private information, and your personal identification information will be protected well if you choose us. Once the order finishes, your personal information will be concealed. In addition, SPLK-4001 Exam Dumps contain not only quality but also certain quantity. It will be enough for you to pass the exam. In order to build up your confidence for SPLK-4001 exam dumps, we are pass guarantee and money back guarantee, if you fail to pass the exam, we will give you full refund.

Splunk O11y Cloud Certified Metrics User Sample Questions (Q54-Q59):

NEW QUESTION # 54
Which of the following can be configured when subscribing to a built-in detector?

- A. Links to a chart.
- B. Alerts on team landing page.
- C. Alerts on a dashboard.
- D. Outbound notifications.

Answer: D

Explanation:
Explanation
According to the web search results1, subscribing to a built-in detector is a way to receive alerts and notifications from Splunk Observability Cloud when certain criteria are met. A built-in detector is a detector that is automatically created and configured by Splunk Observability Cloud based on the data from your integrations, such as AWS, Kubernetes, or OpenTelemetry1. To subscribe to a built-in detector, you need to do the following steps:
Find the built-in detector that you want to subscribe to. You can use the metric finder or the dashboard groups to locate the built-in detectors that are relevant to your data sources1.
Hover over the built-in detector and click the Subscribe button. This will open a dialog box where you can configure your subscription settings1.
Choose an outbound notification channel from the drop-down menu. This is where you can specify how you want to receive the alert notifications from the built-in detector. You can choose from various channels, such as email, Slack, PagerDuty, webhook, and so on2. You can also create a new notification channel by clicking the + icon2.
Enter the notification details for the selected channel. This may include your email address, Slack channel name, PagerDuty service key, webhook URL, and so on2. You can also customize the notification message with variables and markdown formatting2.
Click Save. This will subscribe you to the built-in detector and send you alert notifications through the chosen channel when the detector triggers or clears an alert.
Therefore, option C is correct.

NEW QUESTION # 55
Changes to which type of metadata result in a new metric time series?

- A. Sources
- B. Properties
- C. Dimensions
- D. Tags

Answer: C

Explanation:
The correct answer is A. Dimensions.
Dimensions are metadata in the form of key-value pairs that are sent along with the metrics at the time of ingest. They provide additional information about the metric, such as the name of the host that sent the metric, or the location of the server. Along with the metric name, they uniquely identify a metric time series (MTS)1 Changes to dimensions result in a new MTS, because they create a different combination of metric name and dimensions. For example, if you change the hostname dimension from host1 to host2, you will create a new MTS for the same metric name1 Properties, sources, and tags are other types of metadata that can be applied to existing MTSes after ingest. They do not contribute to uniquely identify an MTS, and they do not create a new MTS when changed2 To learn more about how to use metadata in Splunk Observability Cloud, you can refer to this documentation2.
1: https://docs.splunk.com/Observability/metrics-and-metadata/metrics.html#Dimensions 2: https://docs.splunk.com/Observability/metrics-and-metadata/metrics-dimensions-mts.html

NEW QUESTION # 56
With exceptions for transformations or timeshifts, at what resolution do detectors operate?

- A. The resolution of the chart
- B. The resolution of the dashboard
- C. 10 seconds
- D. Native resolution

Answer: D

Explanation:
According to the Splunk Observability Cloud documentation1, detectors operate at the native resolution of the metric or dimension that they monitor, with some exceptions for transformations or timeshifts. The native resolution is the frequency at which the data points are reported by the source. For example, if a metric is reported every 10 seconds, the detector will evaluate the metric every 10 seconds. The native resolution ensures that the detector uses the most granular and accurate data available for alerting.

NEW QUESTION # 57
Which analytic function can be used to discover peak page visits for a site over the last day?

- A. Lag: (24h)
- B. Count: (Id)
- C. Maximum: Aggregation (Id)
- D. Maximum: Transformation (24h)

Answer: D

Explanation:
According to the Splunk Observability Cloud documentation1, the maximum function is an analytic function that returns the highest value of a metric or a dimension over a specified time interval. The maximum function can be used as a transformation or an aggregation. A transformation applies the function to each metric time series (MTS) individually, while an aggregation applies the function to all MTS and returns a single value. For example, to discover the peak page visits for a site over the last day, you can use the following SignalFlow code:
maximum(24h, counters("page.visits"))
This will return the highest value of the page.visits counter metric for each MTS over the last 24 hours. You can then use a chart to visualize the results and identify the peak page visits for each MTS.

NEW QUESTION # 58
How is it possible to create a dashboard group that no one else can edit?

- A. Link the dashboard group to the team.
- B. Hide the edit menu on the dashboard group.
- C. Ask the admin to lock the dashboard group.
- D. Restrict the write access on the dashboard group.

Answer: D

Explanation:
According to the web search results, dashboard groups are a feature of Splunk Observability Cloud that allows you to organize and share dashboards with other users in your organization1. You can set permissions for each dashboard group, such as who can view, edit, or manage the dashboards in the group1. To create a dashboard group that no one else can edit, you need to do the following steps:
Create a dashboard group as usual, by selecting Dashboard Group from the Create menu on the navigation bar, entering a name and description, and adding dashboards to the group1.
Select Alert settings from the Dashboard actions menu (···) on the top right corner of the dashboard group. This will open a dialog box where you can configure the permissions for the dashboard group1.
Under Write access, select Only me. This will restrict the write access to the dashboard group to yourself only. No one else will be able to edit or delete the dashboards in the group1.
Click Save. This will create a dashboard group that no one else can edit.
