ISACA Certificate of Cloud Auditing Knowledge Sample Questions (Q191-Q196):

NEW QUESTION # 191

When establishing cloud governance, an organization should FIRST test by migrating:

- A. all applications at once to the cloud.
- **B. a few applications to the cloud.**
- C. legacy applications to the cloud.
- D. complex applications to the cloud

Answer: B

Explanation:

Explanation

When establishing cloud governance, an organization should first test by migrating a few applications to the cloud. Cloud governance is the process of defining and implementing policies, procedures, standards, and controls to ensure the effective, efficient, secure, and compliant use of cloud services. Cloud governance requires a clear understanding of the roles, responsibilities, expectations, and objectives of both the cloud service provider and the cloud customer, as well as the alignment of the cloud strategy with the business strategy. Cloud governance also involves monitoring, measuring, and reporting on the performance, availability, security, compliance, and cost of cloud services.

Migrating a few applications to the cloud can help an organization to test and validate its cloud governance approach before scaling up to more complex or critical applications. Migrating a few applications can also help an organization to:

Identify and prioritize the business requirements, risks, and benefits of moving to the cloud.

Assess the readiness, suitability, and compatibility of the applications for the cloud.

Choose the appropriate cloud service model (such as SaaS, PaaS, or IaaS) and deployment model (such as public, private, hybrid, or multi-cloud) for each application.

Define and implement the necessary security, compliance, privacy, and data protection measures for each application.

Establish and enforce the roles and responsibilities of the cloud governance team and other stakeholders involved in the migration process.

Develop and execute a migration plan that includes testing, validation, verification, and rollback procedures for each application.

Monitor and measure the performance, availability, security, compliance, and cost of each application in the cloud.

Collect feedback and lessons learned from the migration process and use them to improve the cloud governance approach.

Migrating a few applications to the cloud can also help an organization to avoid some common pitfalls and challenges of cloud migration, such as:

Migrating legacy or incompatible applications that require significant re-engineering or refactoring to work in the cloud.

Migrating all applications at once without proper planning, testing, or governance, which can result in operational disruptions, data loss, security breaches, or compliance violations.

Migrating complex or critical applications without adequate testing or governance, which can increase the risk of failure or downtime.

Migrating applications without considering the impact on the end-users or customers, who may experience changes in functionality, performance, usability, or accessibility.

Therefore, migrating a few applications to the cloud is a recommended best practice for establishing cloud governance. It can help an organization to gain experience and confidence in using cloud services while ensuring that its cloud governance approach is effective, efficient, secure, and compliant.

NEW QUESTION # 192

Under GDPR, an organization should report a data breach within what time frame?

- A. 1 week
- B. 48 hours
- C. 2 weeks
- **D. 72 hours**

Answer: D

Explanation:

Under the General Data Protection Regulation (GDPR), organizations are required to report a data breach to the appropriate supervisory authority within 72 hours of becoming aware of it. This timeframe is critical to ensure timely communication with the authorities and affected individuals, if necessary, to mitigate any potential harm caused by the breach.
