

New WGU Data-Management-Foundations Mock Test - Data-Management-Foundations Boot Camp

What's more, part of that TrainingDump Data-Management-Foundations dumps now are free: <https://drive.google.com/open?id=1n2nR3fBDPd7BtD77b6MqXZZewGZVM76l>

Whether you prefer web-based practice exam, desktop-based exam, or PDF real questions, we've got you covered. We believe that variety is key when it comes to WGU Data-Management-Foundations Exam Preparation, and that's why we offer three formats that cater to different learning styles and preferences.

We assure that you can not only purchase high-quality Data-Management-Foundations prep guide but also gain great courage & trust from us. A lot of online education platform resources need to be provided by the user registration to use after purchase, but it is simple on our website. We provide free demo of Data-Management-Foundations guide torrent, you can download any time without registering. Fast delivery—after payment you can receive our Data-Management-Foundations Exam Torrent no more than 10 minutes, so that you can learn fast and efficiently. Besides, we provide 24*365 online service and remote professional staff to guide you about downloading or using our Data-Management-Foundations exam torrent. Still other more service terms are waiting for your experience. Why don't you try and purchase our Data-Management-Foundations prep guide?

Data-Management-Foundations Boot Camp - Reliable Data-Management-Foundations Test Forum

Since our company's establishment, we have devoted mass manpower, materials and financial resources into Data-Management-Foundations exam materials and until now, we have a bold idea that we will definitely introduce our Data-Management-Foundations study materials to the whole world and make all people that seek fortune and better opportunities have access to realize their life value. Our Data-Management-Foundations Practice Questions, therefore, is bound to help you pass through the Data-Management-Foundations exam and win a better future.

WGU Data Management – Foundations Exam Sample Questions (Q31-Q36):

NEW QUESTION # 31

Which clause from a SELECT statement immediately accompanies the SELECT clause in MySQL?

- A. FROM
- B. VALUE
- C. TABLE
- D. WHERE

Answer: A

Explanation:

In SQL syntax, the FROM clause is the first clause that follows SELECT. It specifies the table(s) from which the data will be retrieved.

Example:

sql

SELECT name, salary FROM Employees;

- * Option A (Correct): The FROM clause immediately follows the SELECT clause in MySQL.
- * Option B (Incorrect): VALUE is not a valid clause in MySQL SELECT statements.
- * Option C (Incorrect): WHERE is used to filter records after specifying the table in FROM.
- * Option D (Incorrect): TABLE is not a valid clause following SELECT in SQL.

NEW QUESTION # 32

Which designation is an individual value, such as a salary?

- **A. Attribute type**
- B. Glossary
- C. Entity type
- D. Relationship

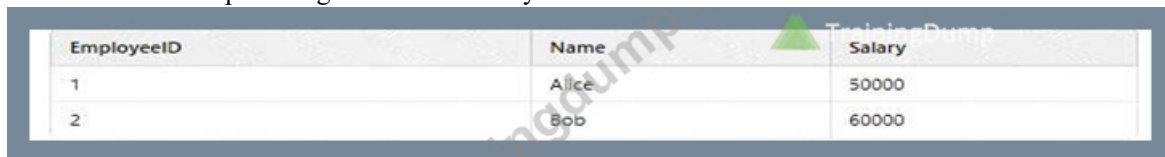

Answer: A

Explanation:

An attribute type refers to a single, specific value within a table, such as Salary, Age, or Price.

Example Usage:

A screenshot of a computer AI-generated content may be incorrect.

EmployeeID	Name	Salary
1	Alice	50000
2	Bob	60000

CREATE TABLE Employees (

EmpID INT PRIMARY KEY,

Name VARCHAR(50),

Salary DECIMAL(10,2)

);

* Salary is an attribute type with individual values for each employee.

Why Other Options Are Incorrect:

- * Option A (Glossary) (Incorrect): Refers to documentation, not database values.
- * Option B (Entity type) (Incorrect): Represents a class of objects (e.g., Employees), not individual values.
- * Option D (Relationship) (Incorrect): Defines connections between entities, not attributes.

Thus, the correct answer is Attribute type, as it represents an individual data value.

NEW QUESTION # 33

Which function is considered an aggregate function?

- **A. MAX**
- B. TRIM
- C. ABS
- D. DESC

Answer: A

Explanation:

Aggregate functions perform calculations on a set of values and return a single result. MAX() is one such function, returning the largest value in a column.

Common Aggregate Functions:

A screenshot of a computer AI-generated content may be incorrect.

Function	Description
SUM()	Returns the total sum of a column.
AVG()	Returns the average value.
COUNT()	Returns the number of rows.
MIN()	Returns the smallest value.
MAX()	Returns the largest value.

Example Usage:

sql

SELECT MAX(Salary) FROM Employees;

* Retrieves the highest salary in the Employees table.

Why Other Options Are Incorrect:

* Option B (TRIM) (Incorrect): Removes spaces from strings but is not an aggregate function.

* Option C (ABS) (Incorrect): Returns the absolute value of a number but does not aggregate multiple rows.

* Option D (DESC) (Incorrect): Used in ORDER BY for sorting in descending order, not for aggregation.

Thus, the correct answer is MAX(), as it is a true aggregate function.

NEW QUESTION # 34

Which object relates an entity to itself in an entity-relationship model?

- A. Relationship instance
- B. Repository
- C. Reflexive relationship
- D. Attribute

Answer: C

Explanation:

A reflexive relationship (also called unary relationship) occurs when an entity is related to itself.

Example Usage:

A screenshot of a computer AI-generated content may be incorrect.

EmployeeID	Name	ManagerID (FK)
1	Alice	NULL
2	Bob	1
3	Carol	1

```
CREATE TABLE Employees (
  EmpID INT PRIMARY KEY,
  Name VARCHAR(50),
  ManagerID INT,
  FOREIGN KEY (ManagerID) REFERENCES Employees(EmpID)
);
```

* ManagerID refers to another employee within the same table.

Why Other Options Are Incorrect:

* Option A (Repository) (Incorrect): A data storage structure, not a relationship type.

* Option B (Relationship instance) (Incorrect): Describes a specific connection between entities, not a reflexive relationship.

* Option D (Attribute) (Incorrect): Attributes store characteristics, but do not define relationships.

Thus, the correct answer is Reflexive relationship, as it relates an entity to itself.

NEW QUESTION # 35

Which primary key values consist of a single field only?

- A. Meaningless
- B. Stable
- C. Partition
- D. Simple

Answer: D

Explanation:

A simple primary key consists of only one column that uniquely identifies each row in a table.

Example Usage:

sql

```
CREATE TABLE Students (  
  StudentID INT PRIMARY KEY,  
  Name VARCHAR(50)  
);
```

* StudentID is a simple primary key because it consists of only one field.

Why Other Options Are Incorrect:

* Option B (Partition) (Incorrect): Refers to partitioned tables, which divide data for performance reasons but are not related to primary keys.

* Option C (Stable) (Incorrect): This is not a recognized term in database keys.

* Option D (Meaningless) (Incorrect): Primary keys are often meaningless (e.g., auto-incremented IDs), but this is not a term used to describe their structure.

Thus, the correct answer is Simple, as a single-field primary key is referred to as a simple primary key.

NEW QUESTION # 36

.....

Equally amazing are TrainingDump's Data-Management-Foundations dumps. They focus only the utmost important portions of your exam and equip you with the best possible information in an interactive and easy to understand language. Think of boosting up your career with this time-tested and the most reliable exam passing formula. Data-Management-Foundations Brain Dumps are unique and a feast for every ambitious professional who want to try Data-Management-Foundations exam despite their time constraints. There is a strong possibility that most of these dumps you will find in your actual Data-Management-Foundations test.
