Reliable New XK0-005 Exam Labs & Passing XK0-005 Exam is No More a Challenging Task

Our CompTIA practice materials compiled by the most professional experts can offer you with high quality and accuracy XK0-005 practice materials for your success. Up to now, we have more than tens of thousands of customers around the world supporting our CompTIA exam torrent. If you are unfamiliar with our XK0-005 Study Materials, please download the free demos for your reference, and to some unlearned exam candidates, you can master necessities by our CompTIA practice materials quickly.

CompTIA Linux+ Certification Exam Sample Questions (Q67-Q72):

NEW QUESTION # 67

A Linux engineer finds multiple failed login entries in the security log file for application users. The Linux engineer performs a security audit and discovers a security issue. Given the following:

```
# grep -iE '*www*|db' /etc/passwd
www-data:x:502:502:www-data:/var/www/bin/bash
db:x:505:505:db:/opt/db/bin/bash
```

Which of the following commands would resolve the security issue?

- A. `usermod -d /srv/www-data www-data && usermod -d /var/lib/db db`
- B. `chsh -s /bin/false www-data && chsh -s /bin/false db`
- C. `passwd -u www-data && passwd -u db`
- D. `renice -n 1002 -u 502 && renice -n 1005 -u 505`

Answer: B

Explanation:

This command will use the chsh tool to change the login shell of the users www-data and db to /bin/false, which means they will not be able to log in to the system. This will prevent unauthorized access attempts and improve security.

NEW QUESTION # 68

A systems administrator needs to check if the service systemd-resolved.service is running without any errors. Which of the following commands will show this information?

- A. systemctl enable systemd-resolved.service
- B. systemctl mask systemd-resolved.service
- C. systemctl status systemd-resolved.service
- D. systemctl show systemd-resolved.service

Answer: C

Explanation:

The command systemctl status systemd-resolved.service will show the information about the service systemd-resolved.service. The systemctl command is a tool for managing system services and units. The status option displays the current status of a unit, such as active, inactive, or failed. The output also shows the unit description, loaded configuration, process ID, memory usage, and recent log messages. This command will show if the service systemd-resolved.service is running without any errors. This is the correct command to use to accomplish the task. The other options are incorrect because they either perform different actions (enable, mask, or show) or do not show the status of the service (systemctl show systemd-resolved.service only shows the properties of the service, not the status). Reference: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 14: Managing Processes and Scheduling Tasks, page 427.

NEW QUESTION # 69

A junior administrator is trying to set up a passwordless SSH connection to one of the servers. The administrator follows the instructions and puts the key in the authorized_key file at the server, but the administrator is still asked to provide a password during the connection.

Given the following output:

```
junior@server:~$ ls -lh .ssh/auth*  
-rw----- 1 junior junior 566 sep 13 20:56 .ssh/authorized_key
```

Which of the following commands would resolve the issue and allow an SSH connection to be established without a password?

- A. chmod 600 mv .ssh/authorized_key
- B. restorecon -rv .ssh/authorized_key
- C. mv .ssh/authorized_key .ssh/authorized_keys
- D. systemctl restart sshd.service

Answer: C

Explanation:

Explanation

The command mv .ssh/authorized_key .ssh/authorized_keys will resolve the issue and allow an SSH connection to be established without a password. The issue is caused by the incorrect file name of the authorized key file on the server. The file should be named authorized_keys, not authorized_key.

The mv command will rename the file and fix the issue. The other options are incorrect because they either do not affect the file name (restorecon or chmod) or do not restart the SSH service (systemctl). References: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 13: Managing Network Services, page 410.

NEW QUESTION # 70

A Linux administrator was tasked with deleting all files and directories with names that are contained in the sobelete.txt file. Which of the following commands will accomplish this task?

- A. `rm -d -r -f toDelete.txt`
- B. `xargs -f cat toDelete.txt -rm`
- C. `cat toDelete.txt | rm -frd`
- D. `cat toDelete.txt | xargs rm -rf`

Answer: D

Explanation:

Explanation

The command `cat toDelete.txt | xargs rm -rf` will delete all files and directories with names that are contained in the `toDelete.txt` file.

The `cat` command reads the file and outputs its contents to the standard output.

The `|` operator pipes the output to the next command. The `xargs` command converts the output into arguments for the next command.

The `rm -rf` command removes the files and directories recursively and forcefully. This is the correct way to accomplish the task. The other options are incorrect because they either use the wrong options (`-f` instead of `-a` for `xargs`), the wrong arguments (`toDelete.txt` instead of `toDelete.txt` filename for `rm`), or the wrong commands (`rm` instead of `xargs`). References: CompTIA Linux+ (XK0-005) Certification Study Guide, Chapter 11: Managing Files and Directories, pages 349-350.

NEW QUESTION # 71

A Linux administrator is checking connectivity between two servers in separate subnets:

Server A: 10.1.2.20 (source)

Server B: 10.2.1.10 (destination on port 8080)

The administrator tried to run the `curl 10.2.1.10:8080` command on server A and received the following output:

`curl: (7) Failed to connect to 10.2.1.10 port 8080: Connection refused.`

The administrator checked on server B and confirmed nothing is listening on port 8080.

Which of the following commands, when run on server B, would have allowed the administrator to test the connection successfully?

- A. `nmmap -v -p 8080 10.2.1.10`
- B. `tcpdump 'tcp port 8080'`
- C. `ss -l -p dport=8080 dst 10.2.1.10`
- D. `nc -l -p 8080 10.2.1.10`

Answer: A

NEW QUESTION # 72

.....

If you opting for this XK0-005 study engine, it will be a sheer investment. We never boost our achievements, and all we have been doing is trying to become more effective and perfect as your first choice, and determine to help you pass the XK0-005 preparation questions as efficient as possible. And our high-efficiency of the XK0-005 Exam Braindumps is well known among our loyal customers. If you study with our XK0-005 learning materials for 20 to 30 hours, then you will pass the exam easily.

XK0-005 Guaranteed Passing: <https://www.pass4surequiz.com/XK0-005-exam-quiz.html>

After buying the XK0-005 CompTIA Linux+ Certification Exam exam dumps, you will enjoy one year free update, that is to say, you don't input extra money for the update version, Comparing to PDF version which may be printed out and used on paper, these two versions of XK0-005 Test Simulates should be used on electronic device, Our XK0-005 practice test materials will help you clear exams at first attempt and save a lot of time for you.

That is, the smallest value of the new sample should XK0-005 replace the smallest value in the original data, and so on, Determine your printer's native color space, After buying the XK0-005 CompTIA Linux+ Certification Exam exam dumps, you will enjoy one year free update, that is to say, you don't input extra money for the update version.
