Attain 100% Success with Cisco 500-710 Exam Questions on Your First Attempt

If you are going to prepare for the 500-710 exam in order to get the related certification and improve yourself, you are bound to be very lucky. Because you meet us, we are willing to bring a piece of good news for you. With the joint efforts of all parties, our company has designed the very convenient and useful 500-710 Study Materials. More importantly, the practices have proven that the study materials from our company have helped a lot of people achieve their goal and get the related certification.

Cisco Video Infrastructure Implementation Sample Questions (Q75-Q80):

NEW QUESTION # 75

An engineer wants to use TMS to send registration configurations automatically every Sunday at 3:00 a.m to a group of endpoints in a remote office. Where does the engineer navigate to create this setting?

- A. Systems> Configuration Templates
- B. Systems> Provisioning
- C. System> Manage Dial Plan
- D. System> Navigator

Answer: A

NEW QUESTION # 76

Which two options are call-control devices in a Cisco Collaboration environment? (Choose two)

- A. Cisco Meeting Server
- B. Cisco Content Server
- C. Cisco Expressway
- D. Cisco Telepresence Endpoint
- E. Cisco Unified Communications Manager

Answer: C,E

NEW QUESTION # 77

Which description of the role of the service preference in the Cisco Conductor is true?

- A. It consists of one or more bridge pools and it determines which of these pools, in order of priority, to use for a conference.
- B. It consists of a group of conference aliases and it determines, in order of priority, which alias to choose for a conference.
- C. It determines the conference template to be used for a particular conference based upon alias.
- D. It determines the bandwidth that is supplied by the service provider.

Answer: A

Explanation:

* The Cisco Conductor is a software application that provides intelligent resource management and conference orchestration for video conferencing deployments¹.

* The service preference is a configuration option in the Cisco Conductor that defines the order of preference for using different bridge pools for a conference².

* A bridge pool is a logical grouping of one or more conference bridges that share the same characteristics, such as location, capacity, media encryption, and conference type².

* The service preference consists of one or more bridge pools and it determines which of these pools, in order of priority, to use for a conference².

* The service preference is applied based on the conference alias that is used to initiate or join a conference².

* The service preference does not determine the conference template, the bandwidth, or the conference alias for a conference.

These are determined by other factors, such as the call control system, the conference scheduling system, or the conference bridge configuration².

NEW QUESTION # 78

Which description of the steps one must take to build a TMS phone book is true?

- A. Connect TMS to the Cisco Unified Communications Manager contact list files, create a phone book, connect the files to a phone book, and set on systems.
- B. Export a .csv file to the TMS database from AD or Outlook, create a phone book, connect the file to a phone book, and set on systems.
- C. Create a contact list, create a phone book, connect the contact list to the phone book, and set on systems.
- D. Create a source, create a phone book, connect the source to the phone book, and set on systems.

Answer: D

NEW QUESTION # 79

Which protocol is used to communicate codec capabilities and Real-Time Transport Protocol ports?

- A. Assent
- B. Session Description Protocol
- C. Real-Time Transport Control Protocol
- D. H.460

Answer: B

Explanation:

* The Session Description Protocol (SDP) is a protocol that defines a text-based format for describing the multimedia sessions and the media streams involved in them[2].

* SDP is used to convey information such as the session name, purpose, originator, timing, media types, codecs, formats, transport protocols, ports, addresses, encryption keys, bandwidth, and other attributes¹².

* SDP is typically used in conjunction with other signaling protocols, such as SIP, H.323, or RTSP, to establish and control the multimedia sessions¹².

* SDP does not itself provide any mechanism for transporting the media streams; it only describes them. The actual media transport is done by protocols such as RTP, which uses the information provided by SDP to set up the appropriate ports and codecs¹².
