

Newest Analytics-Arch-201 Preparation Engine: Salesforce Certified Tableau Architect Exhibit Hhigh- effective Exam Dumps - ITEXamDownload

Our Salesforce Analytics-Arch-201 practice exam software is the most impressive product to learn and practice. We have a team of professional software developers to ensure the software's productivity. After installation, Salesforce Analytics-Arch-201 Practice Exam software is used without an internet connection.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.
Topic 2	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Quiz Reliable Salesforce - Analytics-Arch-201 - Salesforce Certified Tableau Architect Exam Certification

The Analytics-Arch-201 PDF is the most convenient format to go through all exam questions easily. It is a compilation of actual Salesforce Analytics-Arch-201 exam questions and answers. The PDF is also printable so you can conveniently have a hard copy of Salesforce Analytics-Arch-201 Dumps with you on occasions when you have spare time for quick revision.

Salesforce Certified Tableau Architect Sample Questions (Q132-Q137):

NEW QUESTION # 132

For an administrative dashboard designed to monitor overall Tableau Server health, which key metric should be prominently featured?

- A. The frequency of user logins and logouts on the server
- B. The number of extract refresh failures occurring on the server
- **C. The average load time of dashboards and views on the server**
- D. The total number of views created by users each day

Answer: C

Explanation:

The average load time of dashboards and views on the server In an administrative dashboard focusing on Tableau Server health, featuring the average load time of dashboards and views is crucial. This metric provides a direct indication of server performance and user experience. It helps identify if there are any speed or efficiency issues that need to be addressed to maintain optimal server health. Option A is incorrect because the total number of views created does not directly indicate server health. Option C is incorrect as the frequency of user logins and logouts, while important, doesn't directly reflect the server's performance. Option D is incorrect because while extract refresh failures are important, they do not provide a comprehensive overview of server health like average load times do.

NEW QUESTION # 133

After performing load testing on Tableau Server, you observe a significant increase in response times during peak user activity. What is the most appropriate action based on this result?

- A. Immediately add more hardware resources, such as RAM and CPU, to the server
- **B. Analyze server configurations and optimize performance settings before considering hard-ware upgrades**
- C. Ignore the results as temporary spikes in response times are normal during peak periods
- D. Reduce the number of concurrent users allowed on the server to decrease load

Answer: B

Explanation:

Analyze server configurations and optimize performance settings before considering hardware upgrades Upon observing increased response times during peak activity in load testing, the appropriate initial action is to analyze and optimize server configurations and performance settings. This approach involves reviewing settings such as cache, parallelism, and other performance-related configurations that could impact response times, offering a potentially more cost-effective solution than immediate hardware upgrades. Option A is incorrect because adding hard-ware resources should be considered only after ensuring that the server configurations are fully optimized. Option C is incorrect as reducing the number of concurrent users may not address the underlying performance issues and could negatively impact user experience. Option D is incorrect because ignoring the results can lead to ongoing performance issues, adversely affecting user satisfaction and server reliability.

NEW QUESTION # 134

In a multi-node Tableau Server environment, you are experiencing intermittent database connectivity issues. What should be the first step in troubleshooting this problem?

- A. Increasing the number of worker nodes in the Tableau Server environment to enhance overall connectivity
- B. Changing the database server to a different platform that is known for more stable connectivity
- C. Upgrading the database server's hardware to improve its ability to handle connections
- **D. Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any**

connectivity barriers

Answer: D

Explanation:

Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any connectivity barriers The first step in troubleshooting intermittent database connectivity issues in a multi-node Tableau Server environment is to check the network configuration and firewall settings. This involves ensuring that there are no barriers or misconfigurations in the network that could be blocking or interrupting the connectivity between the Tableau Server nodes and the database server. Option A is incorrect because simply increasing the number of worker nodes may not address the underlying network connectivity issues. Option C is incorrect as upgrading the database server's hardware does not directly resolve network connectivity problems. Option D is incorrect because changing the database platform is a drastic measure and should be considered only after ruling out network-related issues.

NEW QUESTION # 135

You notice that Tableau Server on a Windows system is experiencing slow performance issues when accessed through a web proxy. What should be the initial step to address this performance issue?

- A. Disabling the web proxy to see if performance improves without it
- **B. Checking the web proxy settings for any bandwidth limits or filtering rules that might be affecting performance**
- C. Configuring Tableau Server to use an alternative port that bypasses the web proxy
- D. Reinstalling Tableau Server to ensure it's properly configured for proxy usage

Answer: B

Explanation:

Checking the web proxy settings for any bandwidth limits or filtering rules that might be affecting performance When facing slow performance issues with Tableau Server accessed via a web proxy, the initial step should be to check the web proxy settings. Look for any bandwidth limits, filtering rules, or other configurations that might be impeding the data flow and affecting performance. Adjusting these settings can often resolve performance issues related to proxy use. Option A is incorrect as disabling the web proxy might not be feasible due to organizational policies and does not directly address the root cause. Option C is incorrect because reinstalling Tableau Server is an excessive step before checking proxy settings. Option D is incorrect as changing the port used by Tableau Server might not be feasible or effective in addressing performance issues related to proxy settings.

NEW QUESTION # 136

During the installation of Tableau Server on a Linux system, you encounter a failure with the error message indicating a permissions issue. What is the first step you should take to resolve this issue?

- A. Increasing the RAM and CPU resources allocated to the Linux server
- B. Reinstalling the Linux operating system to ensure a clean environment for Tableau Server
- **C. Checking and modifying the file and directory permissions where Tableau Server is being installed**
- D. Configuring the Linux server to use a different file system

Answer: C

Explanation:

Checking and modifying the file and directory permissions where Tableau Server is being installed When encountering a permissions issue during the installation of Tableau Server on Linux, the first and most relevant step is to check and modify the file and directory permissions where Tableau Server is being installed. Permission issues are common in Linux environments and ensuring that the Tableau Server installation directory has the correct permissions is essential for a successful installation. Option A is incorrect because reinstalling the Linux operating system is an excessive measure for resolving permission issues. Option C is incorrect as increasing hardware resources does not address permission-related installation failures. Option D is incorrect because changing the file system is unrelated to permission issues and is not a standard trouble-shooting step for Tableau Server installation problems.

NEW QUESTION # 137

.....

It's not easy for most people to get the Analytics-Arch-201 guide torrent, but I believe that you can easily and efficiently obtain

qualification Analytics-Arch-201 certificates as long as you choose our products. After you choose our study materials, you can master the examination point from the Analytics-Arch-201 Guide question. Then, you will have enough confidence to pass your exam. As for the safe environment and effective product, why don't you have a try for our Analytics-Arch-201 question torrent, never let you down!
