Axis Network Video Exam Sample Questions (Q322-Q327):

NEW QUESTION # 322

Why is germanium used for thermal camera lenses?

- A. It has high optical dispersion
- **B. It is transparent to the infrared wavelengths**
- C. It has a low index of refraction
- D. It is inexpensive

Answer: B

Explanation:

Germanium is used for thermal camera lenses because it is transparent to infrared wavelengths. This transparency allows infrared radiation to pass through the lens and reach the camera sensor, enabling the capture of thermal images. Germanium's optical properties make it an ideal material for thermal imaging applications. References: Axis Communications thermal camera specifications and technical documentation.

NEW QUESTION # 323

An explosion protected camera

- **A. contains any internal explosion within its housing.**
- B. is designed to withstand an external explosion.
- C. uses both optical and thermal technology.
- D. automatically activates a cooling system when needed.

Answer: A

Explanation:

An explosion-protected camera is specifically designed to contain any internal explosion within its housing. This type of camera is built to operate in hazardous environments where flammable gases or dust may be present. The robust housing prevents the internal explosion from igniting the surrounding atmosphere, thereby ensuring safety. Axis Communications offers explosion-protected cameras that adhere to stringent safety standards to prevent ignition and ensure reliable operation in dangerous conditions, as detailed in their product specifications.

NEW QUESTION # 324

Which statements on Group of video (GOV) length are true? (Choose two)

- A. The GOV length can be adjusted in both Motion JPEG and H.264
- **B. The GOV length setting has an impact on bandwidth**
- **C. A long GOV length increases the storage time on SD card**
- D. The GOV length setting only has an impact on MPEG-4
- E. The GOV length setting is only used for recording

Answer: B,C

Explanation:

The Group of Video (GOV) length setting affects both the bandwidth and storage requirements of video streams. A longer GOV

length, which specifies the interval between keyframes in a video stream, reduces the frequency of keyframes, thus lowering the bandwidth consumption. However, it can also increase the storage time on an SD card because fewer keyframes are stored over a given period, making the video stream more compression-efficient.

NEW QUESTION # 325

Signed firmware

- A. guarantees that the installed operating system is genuinely from Axis.
- B. provides tamper-protected storage of cryptographic information.
- C. makes it possible to trace the video back to the camera origin.
- D. ensures that a device can start only with Axis firmware.

Answer: A

Explanation:

"Signed firmware guarantees that the installed operating system is genuinely from Axis and has not been tampered with. The camera verifies the firmware signature before installation or upgrade."

- Axis Communications, Signed Firmware

"With signed firmware, you are assured that the firmware is authentic and has not been modified."

- Axis Communications Academy, Network Video Fundamentals, 2022

References:

Axis Technical Note: Signed Firmware

Axis Communications Academy, Network Video Fundamentals, 2022 (p. 90)

NEW QUESTION # 326

When installing a network camera with PoE, which best practices should be taken into consideration? (Choose two)

- A. The camera is configured for continuous recording
- B. The camera has the correct software version
- C. The camera has multiple video streams in H.264
- D. The correct cabling standards are being used
- E. The correct PoE standards are being used

Answer: D,E

Explanation:

When installing a network camera with PoE, the following best practices should be considered:

* C. The correct PoE standards are being used. This ensures compatibility between the camera and the PoE switch or injector, preventing power issues.

* E. The correct cabling standards are being used. Category 5e or higher cabling is recommended to ensure reliable power delivery and data transmission over PoE.

Following these practices helps in achieving a stable and efficient PoE camera installation.
