100% Pass MB-820 - Microsoft Dynamics 365 Business Central Developer Useful Pass4sure Dumps Pdf

Are you preparing for taking the Microsoft Dynamics 365 Business Central Developer (MB-820) certification exam? We understand that passing the MB-820 exam with ease is your goal. However, many people struggle because they rely on the wrong study materials. That's why it's crucial to prepare for the MB-820 Exam using the right MB-820 Exam Questions learning material. Look no further than TestPassed, where we take responsibility for providing accurate and reliable Microsoft MB-820 questions prepared by our team of experts.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q22-Q27):

NEW QUESTION # 22

A company has a page named New Job Status connected to a source table named Job. The page has an action named Item Ledger Entries. The company requires the following changes to the page:

- * Filter the page to display only jobs with open or quote status.
- * Add the following comment for internal use: This page does not include completed jobs.
- * Item Ledger Entries action must open the selected job on the page and display it in the UI for users to modify.

You need to select the property selections to use for each requirement.

Which property selections should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Page modifications

Requirement

Display status of open or quote.

Add a comment for internal use.

Action must open selected job on the page.

Property selection

SourceTableView = sorting(Status) order(ascending)

SourceTableView = where(Status = filter(Open | Quote | Planning));

SourceTableView = where(Status = filter(Open | Quote));

Description = 'This page does not include completed jobs;'

ToolTip = 'This page does not include completed jobs;'

RunPageLink = "Job No." = FIELD("No.");

RunPageView = "Job No." = FIELD("No.");

Answer:

Explanation:

Page modifications

Requirement

Display status of open or quote.

Add a comment for internal use.

Action must open selected job on the page.

Property selection

SourceTableView = sorting(Status) order(ascending)

SourceTableView = where(Status = filter(Open | Quote | Planning));

SourceTableView = where(Status = filter(Open | Quote));

Description = 'This page does not include completed jobs;'

ToolTip = 'This page does not include completed jobs;'

RunPageLink = "Job No." = FIELD("No.");

RunPageView = "Job No." = FIELD("No.");

NEW QUESTION # 23

You are cleaning up sandbox environments for a company.

The company requires data to be cleared from the environments each time an extension is published.

You need to configure the launch.json file.

Which schemaUpdateMode property should you set?

- A. ForceUpgrade
- **B. Recreate**
- C. Synchronize
- D. ForceSync

Answer: B

Explanation:

In the context of cleaning up sandbox environments for a company where data needs to be cleared each time an extension is published, the schemaUpdateMode property in the launch.json file should be set to Recreate (D). Setting this property to Recreate ensures that every time the extension is published, the existing tables and data are dropped, and then the tables are recreated based on the current extension's schema. This mode is particularly useful in development and testing environments where you need a clean slate for testing each version of the extension without the remnants of previous data affecting the outcomes. It's important to use this setting cautiously, as it results in the loss of all existing data in the tables defined by the extension, which is suitable for a sandbox environment but not for production environments.

NEW QUESTION # 24

You create a table with fields.

You observe errors in the code

You need to resolve the errors.

```
01 field(1; "Job No."; Code[20])
02 {
03     Caption = 'Job No.';
04 }
05 field(2; Description; text[150])
06 {
07     Caption = 'Description';
08 }
09 field(3; "Sales Amount"; Decimal)
10 {
11     AutoFormatType = 1;
12     CalcFormula = sum("Job Task"."Recognized Sales Amount" where("Job No." = field("No.")));
13     Caption = 'Calc. Recog. Sales Amount';
14     Editable = false;
15 }
16 field(5; "Over Budget"; Boolean)
17 {
18     Caption = 'Over Budget';
19 }
20 field(6; "Project Manager"; Code[50])
21 {
22     Caption = 'Project Manager';
23     TableRelation = "User Setup";
24 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Error resolution

Statement

Yes

No

In line 12, declare "Job Task" as a variable.

☐☐

Add the property FieldClass = FlowField; for field 3.

☐☐

Add the property FieldClass = FlowFilter; for field 3.

☐☐

In line 23, assign the "User Setup" table to a field.

☐☐

Answer:

Explanation:

Error resolution

Statement

Yes

No

In line 12, declare "Job Task" as a variable.

☐☒

Add the property FieldClass = FlowField; for field 3.

☒☐

Add the property FieldClass = FlowFilter; for field 3.

☐☒

In line 23, assign the "User Setup" table to a field.

☒☐

NEW QUESTION # 25

You create a table with fields.

You observe errors in the code

You need to resolve the errors.

```

01 field(1; "Job No."; Code[20])
02 {
03     Caption = 'Job No.';
04 }
05 field(2; Description; text[150])
06 {
07     Caption = 'Description';
08 }
09 field(3; "Sales Amount"; Decimal)
10 {
11     AutoFormatType = 1;
12     CalcFormula = sum("Job Task"."Recognized Sales Amount" where("Job No." = field("No.")));
13     Caption = 'Calc. Recog. Sales Amount';
14     Editable = false;
15 }
16 field(5; "Over Budget"; Boolean)
17 {
18     Caption = 'Over Budget';
19 }
20 field(6; "Project Manager"; Code[50])
21 {
22     Caption = 'Project Manager';
23     TableRelation = "User Setup";
24 }

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Error resolution

Statement	Yes	No
In line 12, declare "Job Task" as a variable.	☐	☐
Add the property FieldClass = FlowField; for field 3.	☐	☐
Add the property FieldClass = FlowFilter; for field 3.	☐	☐
In line 23, assign the "User Setup" table to a field.	☐	☐

Answer:

Explanation:

Error resolution

Statement	Yes	No
In line 12, declare "Job Task" as a variable.	☐	☒
Add the property FieldClass = FlowField; for field 3.	☒	☐
Add the property FieldClass = FlowFilter; for field 3.	☐	☒
In line 23, assign the "User Setup" table to a field.	☒	☐

Explanation:

* In line 12, declare "Job Task" as a variable. = NO

* Add the property FieldClass = FlowField; for field 3. = YES

* Add the property FieldClass = FlowFilter; for field 3. = NO

* In line 23, assign the "User Setup" table to a field. = YES

For "In line 12, declare 'Job Task' as a variable": In the AL code provided, the "Job Task" appears to be part of a CalcFormula of a FlowField, which means it references a table and not a variable. The "Job Task" does not need to be declared as a variable because it is used to reference a table in a CalcFormula expression.

For "Add the property FieldClass = FlowField; for field 3": The line of code CalcFormula = sum("Job Task

".Recognized Sales Amount" where("Job No." = field("No."))); indicates that this field is calculated from other table data, which is the definition of a FlowField. Therefore, adding the property FieldClass = FlowField; is necessary for the field to function correctly.

For "Add the property FieldClass = FlowFilter; for field 3": FlowFilters are used to filter data based on the value in a flow field.

Since field 3 is using a CalcFormula to sum values, it is a FlowField and not a FlowFilter. Therefore, this statement is not correct.

For "In line 23, assign the 'User Setup' table to a field": The line TableRelation = "User Setup"; suggests that the "Project Manager" field has a relation to the "User Setup" table, which is a method of assigning a table to a field to ensure that the values in "Project Manager" correspond to values in the "User Setup" table. Hence, this statement is true.

NEW QUESTION # 26

A company is setting up a custom telemetry trace signal to send traces on failed customer statement emails.

```
05 local procedure SendTraceOnFailedToEmailCustomerStatement(Customer, Record Customer)
06 var
07     Dimensions: Dictionary of [Text, Text],
08     FailedEmailLbl: Label 'Failed to email customer statement';
09 begin
10     Dimensions.Add('systemId', Customer.SystemId);
11     Session.LogMessage('EUSISTMT', FailedEmailLbl, Verbosity::Error,
12     DataClassification::SystemMetadata, TelemetryScope::ExtensionPublisher, Dimensions);
13 end;
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Telemetry trace statements

Statement	Yes	No
The telemetry trace sends custom signals to an Application Insights resource specified in the extension's app.json file and on the tenant.	☐	☐
Dictionary keys for the extension name and version must be specified to identify the extension during analysis.	☐	☐
The telemetry trace sends events to Application Insights resources set up on the tenant.	☐	☐

Answer:

Explanation:

Telemetry trace statements		
Statement	Yes	No
The telemetry trace sends custom signals to an Application Insights resource specified in the extension's app.json file and on the tenant.	☒	☐
Dictionary keys for the extension name and version must be specified to identify the extension during analysis.	☒	☐
The telemetry trace sends events to Application Insights resources set up on the tenant.	☒	☐

Explanation:

* The telemetry trace sends custom signals to an Application Insights resource specified in the extension's app.json file and on the tenant. = YES

* Dictionary keys for the extension name and version must be specified to identify the extension during analysis. = YES

* The telemetry trace sends events to Application Insights resources set up on the tenant. = YES Telemetry in Business Central allows developers to collect custom telemetry for extensions using Application Insights. The telemetry trace is used to send custom signals to an Application Insights resource. This resource is typically specified in the app.json file of the extension and must be configured on the tenant where the extension is installed.

The use of dictionary keys for the extension name and version is a best practice to identify the extension during analysis in Application Insights. These keys can be added to the telemetry trace to ensure that when the data is collected, it's clear which extension the data is associated with.

Finally, it is correct that the telemetry trace sends events to Application Insights resources that are set up on the tenant, enabling the collection and analysis of telemetry at the tenant level.

NEW QUESTION # 27

.....

As a matter of fact, long-time study isn't a necessity, but learning with high quality and high efficient is the key method to assist you to succeed. We provide several sets of MB-820 test torrent with complicated knowledge simplified and with the study content easy to master, thus limiting your precious time but gaining more important knowledge. Our study materials are cater every candidate no

matter you are a student or office worker, a green hand or a staff member of many years' experience, MB-820 Certification Training is absolutely good choices for you. Therefore, you have no need to worry about whether you can pass the exam, because we guarantee you to succeed with our technology strength.
