APP test engine of Fortinet NSE7_EFW-7.2 exam is popular with at least 60% candidates since all most certification candidates are fashion and easy to adapt to this new studying method. Someone thinks that APP test engine of NSE7_EFW-7.2 exam is convenient to use any time anywhere. Also part of candidates thinks that this version can simulate the real scene with the real test. If you can open the browser you can learn. Also if you want to learn offline, you should not clear the cache after downloading and installing the APP test engine of NSE7_EFW-7.2 Exam.

Fortinet NSE7_EFW-7.2 Exam Syllabus Topics:

Topic	Details
Topic 1	System configuration: This topic discusses Fortinet Security Fabric and hardware acceleration. Furthermore, it delves into configuring various operation modes for an HA cluster.
Topic 2	Security profiles: Using FortiManager as a local FortiGuard server is discussed in this topic. Moreover, it delves into configuring web filtering, application control, and the intrusion prevention system (IPS) in an enterprise network.

Topic 3	Central management: The topic of Central management covers implementing central management.
Topic 4	Routing: It covers implementing OSPF to route enterprise traffic and Border Gateway Protocol (BGP) to route enterprise traffic.
Topic 5	VPN: Implementing IPsec VPN IKE version 2 is discussed in this topic. Additionally, it delves into implementing auto-discovery VPN (ADVPN) to enable on-demand VPN tunnels between sites.

The PDF4Test is committed to making the Channel Partner Program NSE7_EFW-7.2 exam preparation journey simple, smart, and swift. To meet this objective the PDF4Test is offering Fortinet NSE7_EFW-7.2 practice exam questions with top-rated features. These features are updated and real Fortinet NSE 7 - Enterprise Firewall 7.2 NSE7_EFW-7.2 exam questions, availability of Channel Partner Program Fortinet NSE 7 - Enterprise Firewall 7.2 NSE7_EFW-7.2 Exam real questions in three easy-to-use and compatible formats, three months free updated Fortinet NSE 7 - Enterprise Firewall 7.2 NSE7_EFW-7.2 exam questions download facility, affordable price and 100 percent Fortinet NSE 7 - Enterprise Firewall 7.2 NSE7_EFW-7.2 exam passing money back guarantee.

Fortinet NSE 7 - Enterprise Firewall 7.2 Sample Questions (Q16-Q21):

NEW QUESTION # 16

Exhibit.

Refer to the exhibit, which shows a partial web filter profile configuration. What can you conclude from this configuration about access to www.facebook.com, which is categorized as Social Networking?

- A. The access is allowed based on the FortiGuard Category Based Filter configuration
- B. The access is blocked based on the URL Filter configuration
- C. The access is blocked if the local or the public FortiGuard server does not reply
- D. The access is blocked based on the Content Filter configuration

Answer: B

Explanation:

The access to www.facebook.com is blocked based on the URL Filter configuration. In the exhibit, it shows that the URL "www.facebook.com" is specifically set to "Block" under the URL Filter section¹. References := Fortigate: How to configure Web Filter function on Fortigate, Web filter | FortiGate / FortiOS 7.0.2 | Fortinet Document Library, FortiGate HTTPS web URL filtering ... - Fortinet ... - Fortinet Community

NEW QUESTION # 17

Which statement about network processor (NP) offloading is true?

- A. The NP checks the session key or IPSec SA
- B. You can disable the NP for each firewall policy using the command `np-acceleration st to loose`.
- **C. For TCP traffic FortiGate CPU offloads the first packets of SYN/ACK and ACK of the three-way handshake to NP**
- D. The NP provides IPS signature matching

Answer: C

Explanation:

Option A is correct because the FortiGate CPU offloads the first packets of TCP sessions to the NP for faster connection establishment and reduced CPU load¹. This feature is called TCP offloading and it is enabled by default on FortiGate models with NP6 or higher².

Option B is incorrect because the NP does not provide IPS signature matching. The NP only handles the packet forwarding and encryption/decryption functions, while the IPS signature matching is performed by the content processor (CP) or the CPU³.

Option C is incorrect because the command to disable the NP for each firewall policy is set `np-acceleration disable`, not set `np-acceleration st to loose`⁴. This command can be used to prevent certain traffic types from being offloaded to the NP, such as multicast, broadcast, or non-IP packets⁵.

Option D is incorrect because the NP does not check the session key or IPSec SA. The NP only offloads the IPSec encryption/decryption and tunneling functions, while the session key and IPSec SA are managed by the CPU. Reference: =

1: TCP offloading

2: Network processors (NP6, NP6XLite, NP6Lite, and NP4)

3: Content processors (CP9, CP9XLite, CP9Lite)

4: Disabling NP offloading for firewall policies

5: NP hardware acceleration alters packet flow

6: IPSec VPN concepts

NEW QUESTION # 18

Which ADVPN configuration must be configured using a script on FortiManager, when using VPN Manager to manage FortiGate VPN tunnels?

- A. Configure IP addresses on IPsec virtual interfaces
- B. Set protected network to all
- C. Disable add-route on hub
- **D. Enable AD-VPN in IPsec phase 1**

Answer: D

Explanation:

To enable AD-VPN, you need to edit an SD-WAN overlay template and enable the Auto-Discovery VPN toggle. This will automatically add the required settings to the IPsec template and the BGP template. You cannot enable AD-VPN directly in the IPsec phase 1 settings using VPN Manager. References := ADVPN | FortiManager 7.2.0 - Fortinet Documentation

NEW QUESTION # 19

Exhibit.

FortiGuard Category Based Filter

☐ Allow
 ☐ Monitor
 ☒ Block
 ☐ Warning
 ☐ Authenticate

Name	Action
News and Media	☒ Allow
Social Networking	☒ Allow

URL Filter ☒

URL	Type	Action	Status
www.facebook.com	Wildcard	☒ Block	☒ Enable

Content Filter ☐

Pattern Type	Pattern	Language	Action	Status
Wildcard	facebook	Western	☒ Block	☒ Enable

Rating Options

Allow websites when a rating error occurs ☐

Refer to the exhibit, which shows a partial web filter profile configuration. What can you conclude from this configuration about access to www.facebook.com, which is categorized as Social Networking?

- A. The access is allowed based on the FortiGuard Category Based Filter configuration
- **B. The access is blocked based on the URL Filter configuration**
- C. The access is blocked if the local or the public FortiGuard server does not reply
- D. The access is blocked based on the Content Filter configuration

Answer: B

Explanation:

The access to www.facebook.com is blocked based on the URL Filter configuration. In the exhibit, it shows that the URL "www.facebook.com" is specifically set to "Block" under the URL Filter section.

References :

= Fortigate: How to configure Web Filter function on Fortigate, Web filter | FortiGate / FortiOS 7.0.2 | Fortinet Document Library, FortiGate HTTPS web URL filtering ... - Fortinet ... - Fortinet Community

NEW QUESTION # 20

Refer to the exhibit, which shows config system central-management information.

```

config system central-management
  set type fortimanager
  set allow-push-firmware disable
  set allow-remote-firmware-upgrade disable
  set fmg "10.1.0.241"
  config server-list
    edit 1
      set server-type update
      set server-address 10.1.0.241
    next
  end
  set include-default-servers disable
end

```

Which setting must you configure for the web filtering feature to function?

- A. Configure server-type with the rating option.
- B. Set update-server-location to automatic.
- C. Add server. fortiguard. net to the server list.
- D. Configure securewf.fortiguard. net on the default servers.

Answer: A

Explanation:

For the web filtering feature to function effectively, the FortiGate device needs to have a server configured for rating services. The rating option in the server-type setting specifies that the server is used for URL rating lookup, which is essential for web filtering. The displayed configuration does not list any FortiGuard web filtering servers, which would be necessary for web filtering. The setting set include-default-servers disable indicates that the default FortiGuard servers are not being used, and hence, a specific server for web filtering (like securewf.fortiguard.net) needs to be configured.
